Salesforce Consumer Goods Cloud Accredited Professional Sample Questions (Q76-Q81):

NEW QUESTION # 76

With which object is the promotion object directly associated?

- A. Retail Store Group
- B. Retail Store
- **C. Products**
- D. Promotion Channel

Answer: C

NEW QUESTION # 77

Which three dashboards are natively available with Tableau CRM for Consumer Goods Cloud?

- **A. Product Performance**
- B. Category Insights
- **C. Sales Rep Performance**
- **D. Store Insights**
- E. Inventory Performance

Answer: A,C,D

NEW QUESTION # 78

How is a promotion linked to a Retail Store?

- A. Through a related list on the Retail Store Group object
- B. Through a Promotion Delivery Method
- **C. Through a Promotion Channel record**
- D. Through an account associated with the Retail Store

Answer: C

Explanation:

Promotions are linked to Retail Stores through Promotion Channel records, which define the connection and details of the promotional activities.

NEW QUESTION # 79

Which of the following is accurate regarding the Einstein Vision model?

- A. The model is created via crowdsourcing of images available via public copyright licenses
- B. The model is created automatically by Einstein based on uploading the perfect image
- C. The model is created in store as reps perform their daily tasks during phase 1 rollout
- **D. The model needs to be created as part of the development process using a base set of images**

Answer: D

Explanation:

The Einstein Vision model is a representation of how objects are detected and counted in an image. The model needs to be created as part of the development process using a base set of images. The base set of images should contain images of the products that need to be detected on the shelf, as well as labels and annotations for each product. The model is then trained and tested using these images and can be improved by adding more images or adjusting the parameters. NEW QUESTION # 80

Universal Containers is using Communications Cloud Order Management and just onboarded their enterprise sellers and regional champions from various regions. After adding these sellers, the volume of orders has gone up considerably and orchestration is failing because the number of Apex jobs queued is exceeding the maximum allowed.

What should a Consultant suggest to mitigate the orchestration errors?

- A. Optimize the number of orchestration auto tasks and use manual tasks.

- B. Enable Platform Events processing for orchestration.
- C. Raise a support case to increase the limit of Apex jobs.
- D. Create an Apex class that splits the orders into multiple orders and submit them asynchronously.

Answer: B

Explanation:

In Salesforce Communications Cloud Order Management, orchestration steps execute through Apex-based orchestration jobs. When order volume rises sharply-as happens when additional sellers or regional teams begin submitting orders-the system may hit Salesforce's platform limit for queued Apex jobs (50 × number of licensed Salesforce users). Once this limit is reached, orchestration fails.

Salesforce's official scalability recommendation is to enable Platform Events for Orchestration. This switches Order Management from synchronous Apex-queue processing to asynchronous, event-driven orchestration, which drastically reduces reliance on Apex jobs. Platform Events allow OM to process far more concurrent orchestration steps without hitting queue limits and provide better throughput and resilience for enterprise-scale flows.

Options A and B are incorrect because Salesforce does not increase Apex job limits, and splitting orders is not a best-practice.

Option D reduces automation and violates OM design principles.
