AZ-400 Exam Cram Questions - Download AZ-400 Pdf

Users can customize the time and AZ-400 questions of Microsoft AZ-400 practice tests according to their needs. You can give more than one test and track the progress of your previous attempts to improve your marks on the next try. These AZ-400 mock tests are made for customers to note their mistakes and avoid them in the next try to pass Designing and Implementing Microsoft DevOps Solutions (AZ-400) exam in a single try.

The Microsoft AZ-400 exam is ideal for professionals working in software development, IT operations, and DevOps roles. It is particularly useful for those who work with Microsoft Azure, as the exam focuses heavily on Azure DevOps and other Microsoft technologies. Professionals who pass the Microsoft AZ-400 exam can demonstrate their ability to design and implement DevOps solutions using Microsoft tools and technologies.

The AZ-400 Exam covers a wide range of topics related to DevOps, including continuous integration and delivery, agile methodologies, infrastructure as code, monitoring and logging, and security and compliance. Candidates will be required to demonstrate their understanding of these topics through a combination of multiple-choice and scenario-based questions.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q277-Q282):

NEW QUESTION # 277
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
The lead developer at your company reports that adding new application features takes longer than expected due to a large

accumulated technical debt.
You need to recommend changes to reduce the accumulated technical debt.
Solution: You recommend reducing the code coupling and the dependency cycles?
Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:
Explanation
Instead reduce the code complexity.
Note: Technical debt is the accumulation of sub-optimal technical decisions made over the lifetime of an application. Eventually, it gets harder and harder to change things: it's the 'sand in the gears' that sees IT initiatives grind to a halt.

NEW QUESTION # 278
Your company uses Azure DevOps to manage the build and release processes for applications.
You use a Git repository for applications source control.
You plan to create a new branch from an existing pull request. Later, you plan to merge the new branch and the target branch of the pull request.
You need to use a pull request action to create the new branch. The solution must ensure that the branch uses only a portion of the code in the pull request.
Which pull request action should you use?

- A. Set as default branch
- B. Reactivate
- C. Cherry-pick
- D. Revert
- E. Approve with suggestions

Answer: C

Explanation:
Cherry-pick a pull request
To copy changes made in a pull request to another branch in your repo, follow these steps:
* In a completed pull request, select Cherry-pick, or for an active pull request, select Cherry-pick from the ... menu. Cherry-picking a pull request in this way creates a new branch with the copied changes. Merge into a target branch in a second pull request.
* In Target branch, enter the branch you want to merge the copied changes.
* In Topic branch name, enter a new branch to contain the copied changes, then select Cherry-pick.
* Select Create pull request to merge the topic branch into the target branch to complete the cherry-pick.

NEW QUESTION # 279
To resolve the current technical issue, what should you do to the Register-AzureRmAutomationDscNode command?

- A. Add the DefaultProfile parameter.
- B. Add the AllowModuleOverwrite parameter.
- C. Replace the Register-AzureRmAutomationDscNode cmdlet with Register-AzureRmAutomationScheduledRunbook
- D. Change the value of the ConfigurationMode parameter.

Answer: D

Explanation:

Explanation

Change the ConfigurationMode parameter from ApplyOnly to ApplyAndAutocorrect.

The Register-AzureRmAutomationDscNode cmdlet registers an Azure virtual machine as an APS Desired State Configuration (DSC) node in an Azure Automation account.

Scenario: Current Technical Issue

The test servers are configured correctly when first deployed, but they experience configuration drift over time. Azure Automation State Configuration fails to correct the configurations.

Azure Automation State Configuration nodes are registered by using the following command.

https://docs.microsoft.com/en-us/powershell/module/azurerm.automation/register-azurermautomationdscnode?vi

NEW QUESTION # 280

You are designing the security validation strategy for a project in Azure DevOps.

You need to identify package dependencies that have known security issues and can be resolved by an update.

What should you use?

- A. Octopus Deploy
- B. Gradle
- C. Jenkins
- D. SonarQube

Answer: D

Explanation:

With enterprise level of SonarQube you can use OWASP that runs the security scans for known vulnerabilities.

NEW QUESTION # 281

You need to use an Azure Pipelines pipeline to build and test an app and test the database of the app. The solution must meet the following requirements.

* The test stages must be run in parallel.

* The Publish_Test_Results stage must always be run.

* The test stages must be run after successful completion of the build stage.

* The Publish_Test_Results stage must be run after completion of all the test stages Solution: You include the following elements in the YAML definition of the pipeline.

Does this meet the goal?

- A. No
- B. Yes

Answer: A
