Exam Amazon AWS-Certified-Developer-Associate Lab Questions & AWS-Certified-Developer-Associate Test Price

At present, many office workers are dedicated to improving themselves. Most of them make use of their spare time to study our AWS-Certified-Developer-Associate study materials. As you can see, it is important to update your skills in company. After all, the most outstanding worker can get promotion. You also need to plan for your future. Getting the AWS-Certified-Developer-Associate Study Materials will enhance your ability. Also, various good jobs are waiting for you choose. Your life will become wonderful if you accept our guidance.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample

Questions (Q172-Q177):

NEW QUESTION # 172

A Developer has been asked to build a real-time dashboard web application to visualize the key prefixes and storage size of objects in Amazon S3 buckets. Amazon DynamoDB will be used to store the Amazon S3 metadata.

What is the optimal and MOST cost-effective design to ensure that the real-time dashboard is kept up to date with the state of the objects in the Amazon S3 buckets?

- A. Use an Amazon CloudWatch event backed by an AWS Lambda function. Issue an Amazon S3 API call to get a list of all Amazon S3 objects and persist the metadata within DynamoDB. Have the web application poll the DynamoDB table to reflect this change.
- B. Create a new Amazon EMR cluster to get all the metadata about Amazon S3 objects; persist the metadata into DynamoDB. Have the web application poll the DynamoDB table to reflect this change.
- C. Use Amazon S3 Event Notification backed by a Lambda function to persist the metadata into DynamoDB. Have the web application poll the DynamoDB table to reflect this change.
- D. Run a cron job within an Amazon EC2 instance to list all objects within Amazon S3 and persist the metadata into DynamoDB. Have the web application poll the DynamoDB table to reflect this change.

Answer: A

NEW QUESTION # 173

What is the maximum number of tags that a user can assign to an EC2 instance?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

To help manage EC2 instances as well as their usage in a better way, the user can tag the instances. The tags are metadata assigned by the user which consists of a key and a value. One resource can have a maximum of 10 tags.

Reference: http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/Using_Tags.html

NEW QUESTION # 174

Company D is running their corporate website on Amazon S3 accessed from <http://www.companyd.com>.

Their marketing team has published new web fonts to a separate S3 bucket accessed by the S3 endpoint

<https://s3-us-west-1.amazonaws.com/cdfonts>. While testing the new web fonts, Company D recognized the web fonts are being blocked by the browser.

What should Company D do to prevent the web fonts from being blocked by the browser?

- A. Configure the cdfonts bucket to allow cross-origin requests by creating a CORS configuration
- B. Create a policy on the cdfonts bucket to enable access to everyone
- C. Add the Content-MD5 header to the request for webfonts in the cdfonts bucket from the website
- D. Enable versioning on the cdfonts bucket for each web font

Answer: A

NEW QUESTION # 175

A large e-commerce site is being designed to deliver static objects from Amazon S3. The Amazon S3 bucket will server more than 300 GET requests per second. What should be done to optimize performance? (Select TWO.)

- A. Delete expired Amazon S3 server log files.
- B. Enable Amazon S3 cross-region replication.
- C. Integrate Amazon CloudFront with Amazon S3.

- D. Configure Amazon S3 lifecycle rules.
- E. Randomize Amazon S3 key name prefixes.

Answer: C,E

Explanation:

Explanation

CloudWatch definitely. Random key prefixes is still a valid method of improving performance by using parallel reads. It doesn't mention prefix hashing. For instance prefixes 1/,2/,3/,4/,5/ could provide 5 x parallel streams for S3 as opposed to all objects being in a single folder/prefix e.g. dev/

<https://docs.aws.amazon.com/AmazonS3/latest/dev/optimizing-performance.html>

"There are no limits to the number of prefixes in a bucket. You can increase your read or write performance by parallelizing reads. For example, if you create 10 prefixes in an Amazon S3 bucket to parallelize reads, you could scale your read performance to 55,000 read requests per second." The assumption that prefixes don't matter is incorrect, as described by "Amazon S3 performance guidelines recommended randomizing prefix naming with ****hashed characters**** to optimize performance for frequent data retrievals. You no longer have to randomize prefix naming for performance, and can use sequential date-based naming for your prefixes"

NEW QUESTION # 176

An on-premises application makes repeated calls to store files to Amazon S3. As usage of the application has increased, "LimitExceeded" errors are being logged. What should be changed to fix this error?

- A. Move the application to Amazon EC2.
- B. Load balance the application to multiple servers.
- C. Add a one second delay to each API call.
- D. Implement exponential backoffs in the application.

Answer: D

Explanation:

<https://docs.aws.amazon.com/AWSEC2/latest/APIReference/query-api-troubleshooting.html>

NEW QUESTION # 177

.....

Considering all customers' sincere requirements, AWS-Certified-Developer-Associate test question persist in the principle of "Quality First and Clients Supreme" all along and promise to our candidates with plenty of high-quality products, considerate after-sale services as well as progressive management ideas.
