# Latest Test Huawei H35-211_V2.5 Discount | H35-211_V2.5 Exam Topic

Under the dominance of knowledge-based economy, we should keep pace with the changeable world and renew our knowledge in pursuit of a decent job and higher standard of life. In this circumstance, possessing a H35-211_V2.5 certification in your pocket can totally increase your competitive advantage. Therefore our H35-211_V2.5 Study Guide can help you with dedication to realize your dream, and our H35-211_V2.5 training guide is a great opportunity for you to improve working efficiency and make the process of our work more easily and smoothly.

Huawei H35-211_V2.5 (HCIP-Access V2.5) Exam is a certification exam designed for IT professionals who wish to demonstrate their knowledge and skills in the field of network access technologies. H35-211_V2.5 exam is conducted by Huawei, a leading global provider of information and communications technology (ICT) infrastructure and smart devices. H35-211_V2.5 exam covers various topics related to network access technologies, including access control, authentication, authorization, and accounting (AAA), virtual private network (VPN), and network security.

The HCIP-Access V2.5 certification is particularly important for IT professionals who want to specialize in Huawei products and want to validate their skills in Access Network Technologies. It targets network engineers, network planners, and network administrators who work with Huawei Access products. Those who pass the exam gain the coveted HCIP-Access certificate, which demonstrates their high-level expertise in Huawei Access Network technologies.

100% Pass Huawei - H35-211_V2.5 - HCIP-Access V2.5 Unparalleled Latest Test Discount

In our study, we found that many people have the strongest ability to use knowledge for a period of time at the beginning of their knowledge. As time goes on, memory fades. Our H35-211_V2.5 study materials are designed to help users consolidate what they have learned, will add to the instant of many training, the user can test their learning effect in time after finished the part of the learning content, have a special set of wrong topics in our H35-211_V2.5 Study Materials, enable users to find their weak spot of knowledge in this function, iterate through constant practice, finally reach a high success rate.

Huawei H35-211_V2.5 (HCIP-Access V2.5) Certification Exam is a valuable certification for professionals in the field of access network technology. HCIP-Access V2.5 certification is designed to test the candidate's knowledge, skills, and expertise in access network design, deployment, operation, and maintenance. HCIP-Access V2.5 certification is vendor-neutral, globally recognized, and an excellent investment for individuals who wish to improve their career prospects and gain a competitive advantage in the industry.

Huawei HCIP-Access V2.5 Sample Questions (Q101-Q106):

NEW QUESTION # 101
The maximum spectroscopic (split) ratio supported by 10G EPON is?

- A. 1:256 (Laboratory)
- B. 1:64
- C. 1:32
- D. 1:128

Answer: A

Explanation:
In HCIP-Access teaching materials, 10G-EPON improves optical budget and FEC efficiency compared with
1G EPON, enabling very high split ratios. While commercial deployments commonly use 1:64 or 1:128 depending on optics class and reach, the maximum (laboratory) split ratio often cited for the technology is 1:
256 under favorable conditions.
References: HCIP-Access V2.5 Study Guide - 10G-EPON capabilities (rates, optics classes, and maximum /theoretical split ratios).

NEW QUESTION # 102
(Radio) In the ACL, if you need to filter packets by source IP, destination IP, and port number, the ACL number template to create is:

- A. 4000-4999
- B. 5000-5999
- C. 3000-3999
- D. 2000-2999

Answer: C

Explanation:
On Huawei VRP, Advanced IPv4 ACLs (which can match source IP, destination IP, and L4 port numbers) use the 3000-3999 numbering range.
2000-2999 = Basic IPv4 ACL (matches source IP only).
3000-3999 = Advanced IPv4 ACL (matches source/destination IP, protocol, ports).
4000-4999 = Layer 2 (MAC) ACL.
5000-5999 = User-defined/other ranges, not the standard advanced IPv4 range.
Therefore, to match IPs and ports, select 3000-3999.
References: HCIP-Access V2.5 - ACL Principles and Numbering; Huawei VRP ACL Configuration Guide - IPv4 Basic vs. Advanced ACL Ranges.

NEW QUESTION # 103

Which one of the following protection schemes can provide OLT-level protection?

- A. LACP
- B. Type B dual-homing
- C. Type B single-homing
- D. Ethernet port protection group

Answer: B

NEW QUESTION # 104
What can cause erratic display in IPTV programs?

- A. Some key frames are lost during program compression.
- B. The receive or transmit optical power of the device is at a critical value.
- C. A rate limit is configured on the device.
- D. Some key frames are lost during line transmission.

Answer: A,B,C,D

Explanation:
In Huawei IPTV troubleshooting, mosaic/flash/jerky or intermittent picture typically results from packet loss or bit errors. Common causes include: optical power near the receiver sensitivity threshold causing FEC/BER spikes (A); loss of I-frames (key frames) either in the encoder/compression stage (B) or due to line transmission loss/jitter (D); and device rate-limit (CAR/policing) misconfiguration that drops packets under burst traffic (C). Any of these can yield unstable display.
References: HCIP-Access V2.5 Study Guide - IPTV Service Principles and Fault Location (video artifacts vs. packet loss; optical power thresholds; rate-limit effects); OLT/ONT Video Maintenance Guide - causes of mosaic and black screen.

NEW QUESTION # 105
The maximum spectroscopic ratio supported by 10G GPON is (Radio) ?

- A. 1:64
- B. 1:256
- C. 1:128
- D. 1:32

Answer: C
