All kinds of exams are changing with dynamic society because the requirements are changing all the time. To keep up with the newest regulations of the H12-891_V1.0 exam, our experts keep their eyes focusing on it. Our H12-891_V1.0 exam torrent are updating according to the precise of the real exam. Our H12-891_V1.0 Test Prep to help you to conquer all difficulties you may encounter. Once you choose our H12-891_V1.0 quiz torrent, we will send the new updates for one year long, which is new enough to deal with the exam for you and guide you through difficulties in your exam preparation.

Huawei Technologies Co. Ltd. is a leading global provider of information and communication technology (ICT) infrastructure and smart devices. The company has been offering various certification programs that cater to different levels of expertise in the ICT industry. One of their certification exams is the Huawei Certified Internetwork Expert-Datacom (HCIE-Datacom) V1.0, also known as the H12-891_V1.0 certification exam.

The HCIE-Datacom V1.0 exam is a comprehensive exam that covers a range of topics related to data communication. These topics include network design, network implementation, network maintenance, network troubleshooting, network security, and network management. H12-891_V1.0 Exam also covers the latest industry trends and best practices, ensuring that candidates are up-to-date with the latest developments in the field.

Training H12-891_V1.0 Material - Authentic H12-891_V1.0 Exam Questions

IT elite team of our BraindumpsPass make a great effort to provide large numbers of examinees with the latest version of Huawei's H12-891_V1.0 exam training materials, and to improve the accuracy of H12-891_V1.0 exam dumps. Choosing BraindumpsPass, you can make only half efforts of others to pass the same H12-891_V1.0 Certification Exam. What's more, after you purchase H12-891_V1.0 exam training materials, we will provide free renewal service as long as one year.

Huawei HCIE-Datcom V1.0 Sample Questions (Q236-Q241):

NEW QUESTION # 236

The channelized sub-interface and FlexE technologies both can be used to implement network slicing, but the application scenarios of the two technologies are slightly different. Which of the following statements about the two technologies are correct?

- A. Only FlexE-based network slicing can be deployed across OTN devices.
- B. It is recommended that channelized sub-interface be used to reserve resources for interfaces with a bandwidth of less than 50 Gbit/s.
- C. It is recommended that FlexE be used to reserve resources for 50GE and higher-rate interfaces.
- D. Only network slicing based on channelized sub-interface can be deployed across MSTP devices.

Answer: A,B,C

Explanation:

Network Slicing Using Channelized Sub-Interfaces and FlexE

Both channelized sub-interfaces and FlexE (Flexible Ethernet) are used for network slicing, but they have different application scenarios:

#A. Channelized sub-interface is recommended for interfaces with bandwidth < 50 Gbit/s.

Channelized sub-interfaces split a physical interface into multiple logical sub-interfaces.

Best for lower-bandwidth links (<50 Gbit/s).

#B. FlexE is recommended for 50GE and higher-rate interfaces.

FlexE divides a high-bandwidth physical link (e.g., 100GE, 400GE) into multiple virtual slices.

Used in high-speed backbone and data center networks.

#C. Only FlexE-based network slicing can be deployed across OTN devices.

FlexE is compatible with Optical Transport Network (OTN) and can be used for long-haul slicing across OTN.

#D. Only channelized sub-interface-based network slicing can be deployed across MSTP devices.

Incorrect! While MSTP supports channelized interfaces, FlexE is not restricted to MSTP deployment.

NEW QUESTION # 237

In EPIM-SM, the following description of the PIM Join message is correct?

- A. PIM Join messages are sent every 3 minutes, and status
- B. The upstream router sends a PIM Join acknowledgment in response to each PIM Join message received from the downstream router
- C. PIM Join messages for the multicast tree are only sent when the multicast tree is first established
- D. The PIM Join message is sent every 60 seconds to refresh the status of the upstream router mroute for the multicast tree

Answer: D

NEW QUESTION # 238

The existing router HW1 running BGP is configured with both IBGP neighbors and EBGP tenants. The following descriptions about IBGP Neighbors and EBGP Neighbors are correct?

- A. IBGP neighbors can establish neighbor relationships through the Loopback interface
- B. The router sends BGP updates learned from its IBGP neighbors to its other IBGP neighbors and EPGP neighbors

- C. The router sends BGP updates learned from its EBGP neighbors to its other IBGP neighbors and EBGP neighbors
- D. The router will have an EBGP BGP neighbor from it must be connected directly, otherwise, IBGP-Multi-hop must be configured
- E. EBGP neighbors must be directly connected, otherwise, EBGP-Multi-hop must be configured with

Answer: A,C,E

NEW QUESTION # 239

MPLS supports forwarding equivalence class (FEC). Which of the following cannot be used as an FEC allocation standard?

- A. Destination address
- B. Fragment offset
- C. Class of Service (CoS)
- D. Application protocol

Answer: B,D

Explanation:

Forwarding Equivalence Class (FEC) is a key concept in MPLS (Multiprotocol Label Switching), where packets with the same forwarding characteristics are grouped into an FEC and assigned a label.

Correct Answers (Cannot be Used for FEC Allocation):

A: Fragment Offset - Incorrect as an FEC allocation standard

* Fragment offset is used for reassembling fragmented IP packets at the receiver side.

* It is not relevant for MPLS label assignment.

B: Application Protocol - Incorrect as an FEC allocation standard

* MPLS does not classify packets based on application-layer protocols (e.g., HTTP, FTP).

* It works mainly at Layer 2 and Layer 3.

Incorrect Answers (Valid FEC Allocation Standards):

C: Destination Address - Valid FEC allocation criterion

* One of the most common MPLS FEC classifications.

* Packets with the same destination are grouped into the same FEC.

D: Class of Service (CoS) - Valid FEC allocation criterion

* MPLS uses CoS-based traffic classification (e.g., Exp bits in MPLS headers).

* Different CoS levels can be mapped to different labels.

NEW QUESTION # 240

The multicast IP address is 2291301301, and its corresponding MAC address is :(Multilist)

- A. 01-00-5E-82-82-01
- B. 00-00-5E-02-82-01
- C. 01-00-5E-02-82-01
- D. 00-00-5E-82-82-01

Answer: C

NEW QUESTION # 241

.....

One of the main unique qualities of the BraindumpsPass Google Exam Questions is its ease of use. Our practice exam simulators are user and beginner friendly. You can use Huawei PDF dumps and Web-based software without installation. HCIE-Datcom V1.0 (H12-891_V1.0) PDF questions work on all the devices like smartphones, Macs, tablets, Windows, etc. We know that it is hard to stay and study for the Huawei H12-891_V1.0 exam dumps in one place for a long time.
