C_CPI_2506 100% Exam Coverage, C_CPI_2506 Test Fee

We have always been made rapid progress on our C_CPI_2506 training materials because of the merits of high-efficiency and perfect after-sales services online for 24 hours. Studying with our C_CPI_2506 actual exam, you can get the most professional information and achieve your dreaming scores by your first go. We can claim that as long as you study with our C_CPI_2506 Exam Guide for 20 to 30 hours, you will pass your C_CPI_2506 exam confidently.

SAP Certified Associate - Integration Developer Sample Questions (Q56-Q61):

NEW QUESTION # 56

You want to access individual entities of an HTTP call over XPath. What must you do if no namespace mapping exists?

- A. Remove the XML prolog.

- **B. Remove the namespaces.**
- C. Convert the namespaces to JSON.
- D. Convert the namespaces to XML

Answer: B

Explanation:

If no namespace mapping exists, you must remove the namespaces to access individual entities of an HTTP call over XPath.

Namespaces are prefixes that identify the source or context of an XML element or attribute. If the namespaces are not mapped to a URI, they can cause errors or conflicts when using XPath expressions. Therefore, you must remove the namespaces before applying XPath queries.

Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 57

What kind of editor can you use to manipulate integration flows?

- A. Command-line editor
- B. Code editor
- **C. Graphical editor**

Answer: C

Explanation:

In SAP Cloud Integration, integration flows are manipulated using a web-based graphical editor:

Allows drag-and-drop of adapters, mappings, scripts, and process steps.

Provides visual orchestration of message flows.

Command-line and raw code editors are not supported for iFlow design (though XML behind the iFlow exists, it is not directly edited by developers).

Thus, the editor is the Graphical editor.

NEW QUESTION # 58

What authentication method does the Service Key use to grant access when you generate a Service Key for an SAP Integration Suite Event Mesh message client?

- A. API Key authentication
- **B. auth 2.0 client authentication**
- C. 509 client certificates
- D. Basic Authentication

Answer: B

Explanation:

When generating a Service Key for an SAP Integration Suite Event Mesh message client, the credentials contain details required for authentication and connection.

Event Mesh uses OAuth 2.0 client credential flow for secure access.

The Service Key includes:

Client ID

Client Secret

OAuth Token URL

These values are used by applications to authenticate and obtain tokens before accessing Event Mesh queues or topics.

Other methods (Basic Authentication, API Keys, X.509 certificates) are not used by default for Event Mesh service keys.

NEW QUESTION # 59

Which log level must you use to examine the payload at specific processing steps in an integration flow?

- A. Error
- **B. Trace**
- C. Info

- D. Debug

Answer: B

Explanation:

In SAP Cloud Integration, the log levels are:

Info # Default, logs basic execution details.

Debug # Logs processing steps, but not message payload.

Error # Logs only failures.

Trace # Captures message payloads at specific processing steps, used for deep troubleshooting.

Thus, to examine payload at runtime, the log level must be set to Trace.

NEW QUESTION # 60

Which combination of SAP BTP role collections allows a user to manage queues and topic subscriptions in SAP Event Mesh, and monitor its usage and resources?

- A. EventMeshAdmin and EventMeshDevelop
- B. IntegrationAdmin and IntegrationDevelop
- C. SecurityAdmin and SecurityDevelop
- D. ApplicationAdmin and ApplicationDevelop

Answer: A

Explanation:

In SAP BTP, SAP Event Mesh provides messaging capabilities (queues, topics, and subscriptions) that require specific role collections to enable developers and administrators to perform tasks. SAP delivers two dedicated role collections for Event Mesh: EventMeshDeveloper:

Manages queues and topic subscriptions

Monitors Event Mesh and its queues

Performs testing of queues and message flows

EventMeshAdmin:

Includes all developer capabilities

Provides additional administration rights for lifecycle management of Event Mesh instances and configurations When a user is assigned these role collections, they gain the ability to:

Create and manage queues and topic subscriptions.

Monitor usage and resources such as queue depth, consumers, connections, and pool size within Event Mesh.

Other provided options are incorrect:

ApplicationAdmin/ApplicationDevelop # These are not SAP Event Mesh role collections, they do not provide queue or topic subscription access.

SecurityAdmin/SecurityDevelop # These roles are tied to security configurations and do not allow Event Mesh operations.

IntegrationAdmin/IntegrationDevelop # These roles belong to SAP Integration Suite (Cloud Integration) capability, not Event Mesh.

Therefore, the correct and verified answer according to SAP Integration Developer documentation is:

B). EventMeshAdmin and EventMeshDevelop

NEW QUESTION # 61

.....

The C_CPI_2506 web-based practice test can accessed online. It means the exam candidates can access it from the browsers like Firefox, Microsoft Edge, Google Chrome, and Safari. The user don't need to install or download any excessive plugins to take the SAP Certified Associate - Integration Developer (C_CPI_2506) practice test. Mac, Windows, iOS, Android, and Linux support it. The third and last format is the desktop practice test software. The SAP Certified Associate - Integration Developer (C_CPI_2506) desktop practice test format can be used on Windows computers.
