The Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) questions have many premium features, so you don't face any hurdles while preparing for Analytics-Admn-201 exam and pass it with good grades. It will be an easy-to-use learning material so you can pass the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) test on your first try. We even offer a full refund guarantee (terms and conditions apply) if you couldn't pass the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam on the first try with your efforts.

We provide free update and online customer service which works on the line whole day. Our Analytics-Admn-201 study materials provide varied versions of our Analytics-Admn-201 study material for you to choose and the learning costs you little time and energy. You can use our Analytics-Admn-201 exam prep immediately after you purchase them, we will send our Analytics-Admn-201 Exam Questions within 5-10 minutes to you. We treat your time as our own time, as precious as you see, so we never waste a minute or two in some useless process. Please rest assured that use, we believe that you will definitely pass the Analytics-Admn-201 exam.

Unparalleled Salesforce Analytics-Admn-201 Exam Cost Pass Guaranteed

Along with Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) self-evaluation exams, Analytics-Admn-201 dumps PDF is also available at itPass4sure. These Analytics-Admn-201 questions can be used for quick Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) preparation. Our Analytics-Admn-201 dumps PDF format works on a range of Smart devices, such as laptops, tablets, and smartphones. Since Analytics-Admn-201 Questions Pdf are easily accessible, you can easily prepare for the test without time and place constraints. You can also print this format of itPass4sure's Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam dumps to prepare off-screen and on the go.

Salesforce Certified Tableau Server Administrator Sample Questions (Q38-Q43):

NEW QUESTION # 38

Which two commands are valid and complete commands? (Choose two.)

- A. tsm maintenance cleanup
- B. tsm maintenance backup
- C. tsm maintenance restore
- D. tsm maintenance ziplogs

Answer: A,D

Explanation:

TSM commands manage Tableau Server maintenance-let's validate their syntax:

* Command Requirements:

* Some need arguments (e.g., file paths); others are standalone.

* Valid and Complete: Must work as-is without errors.

* Option C (tsm maintenance cleanup): Correct.

* Details: Removes temporary files and old logs-no arguments required (optional flags like -l exist).

* Use: tsm maintenance cleanup-runs fully.

* Option D (tsm maintenance ziplogs): Correct.

* Details: Creates a zip of logs (e.g., tsm-logs.zip)-no arguments needed (optional -d for date range).

* Use: tsm maintenance ziplogs-complete and valid.

* Option A (tsm maintenance backup): Incorrect.

* Why: Requires -f <filename>.tsbak (e.g., tsm maintenance backup -f backup.tsbak)-incomplete without it.

* Option B (tsm maintenance restore): Incorrect.

* Why: Needs -f <filename>.tsbak (e.g., tsm maintenance restore -f backup.tsbak)-not standalone.

Why This Matters: Correct syntax ensures maintenance tasks execute without errors-critical for server health.

NEW QUESTION # 39

What process enables you to access Tableau Services Manager (TSM) over HTTPS?

- **A. Administration Controller**
- B. Coordination Service
- C. Administration Agent
- D. License Manager

Answer: A

Explanation:

TSM is Tableau Server's management layer, accessible via CLI or web UI (port 8850). HTTPS secures this access-let's identify the responsible process:

* TSM Architecture:

* Administration Controller: Core TSM process, running on the initial node, handling configuration, UI, and CLI commands.

* HTTPS: Enabled by default on port 8850 with a self-signed certificate (configurable to custom certs).

* Option B (Administration Controller): Correct.

* Details: Hosts the TSM web UI (<https://<server>:8850>) and processes CLI requests. It manages the HTTPS listener, serving the interface securely.

* Why: It's the central hub for TSM operations, including secure access.

* Option A (License Manager): Incorrect.

* Why: Validates licenses, not responsible for HTTPS or UI access.

* Option C (Administration Agent): Incorrect.

* Why: Runs on additional nodes in multi-node setups to relay commands to the Controller-no direct HTTPS role.

* Option D (Coordination Service): Incorrect.

* Why: ZooKeeper manages cluster state, not TSM's web interface or HTTPS.

Why This Matters: Secure TSM access protects server administration-Administration Controller is the linchpin.

NEW QUESTION # 40

You use Tableau Desktop 10.5 and plan to publish a visualization to a Tableau Server that runs version

2020.1. You are assigned the Creator site role, and Publisher permissions for a project. What statement correctly describes what happens when you attempt to publish the visualization?

- A. You will see an error message instructing you that you are unable to publish the workbook to a newer version of Tableau Server
- **B. You will see a warning message instructing you that embedded .tde extracts will be upgraded to .hyper**

- C. You will see a warning message instructing you that the workbook will be upgraded to a new version
- D. You will successfully publish the visualization without any errors or warnings

Answer: B

Explanation:

Tableau Desktop and Tableau Server have versioning considerations when publishing content, particularly regarding compatibility between older Desktop versions (e.g., 10.5) and newer Server versions (e.g., 2020.1).

Let's break this down step-by-step:

* Version Context: Tableau Desktop 10.5 was released in 2017 and used the .tde (Tableau Data Extract) format for extracts. Tableau Server 2020.1, released in 2020, introduced the .hyper extract format (starting with version 10.5, but fully standardized later). When publishing from an older Desktop version to a newer Server version, Tableau ensures backward compatibility but may upgrade certain components.

* Publishing Process: With a Creator site role and Publisher permissions, you have the rights to publish workbooks to the specified project. Tableau Server accepts workbooks from older Desktop versions (e.g., 10.5) and upgrades them to the current Server version (2020.1) during publishing. This process is seamless for the workbook itself, but extracts require special handling.

* Extract Handling: If the workbook contains embedded .tde extracts (stored within the .twb or .twbx file), Tableau Server 2020.1 converts these to .hyper format upon publishing. This conversion is necessary because .hyper replaced .tde as the default extract engine starting in Tableau 10.5 and beyond, offering better performance and scalability. During this process, Tableau Desktop or Server displays a warning to inform the user of the upgrade, as it's a one-way conversion (you can't revert to .tde on the Server).

Now, let's evaluate the options:

* Option A (You will successfully publish without any errors or warnings): Incorrect. While the publishing succeeds, a warning about the .tde to .hyper conversion appears if the workbook contains embedded extracts. Without extracts, no warning occurs, but the question's context implies extracts are likely involved (common in visualizations).

* Option B (Error message: unable to publish to a newer version): Incorrect. Tableau supports publishing from older Desktop versions to newer Server versions. There's no outright error blocking this; compatibility is maintained.

* Option C (Warning: embedded .tde extracts will be upgraded to .hyper): Correct. This is the precise warning displayed when a workbook with .tde extracts is published to a Server version that uses .hyper. It ensures the user is aware of the format change, which might affect extract refresh schedules or performance expectations.

* Option D (Warning: workbook will be upgraded to a new version): Partially correct but less specific. The workbook is upgraded to 2020.1 compatibility, but the warning focuses on the extract format change (.tde to .hyper), not the workbook version generically. Option C is more accurate.

Why This Matters: The .tde to .hyper shift improves query performance and supports larger datasets, but users need to know about it for planning (e.g., extract refresh schedules might need adjustment). The warning ensures transparency.

Reference: Tableau Server Documentation - "Publish a Workbook" (https://help.tableau.com/current/server/en-us/publish_workbook.htm) and "Hyper Extract FAQ" (https://help.tableau.com/current/server/en-us/hyper_faq.htm).

NEW QUESTION # 41

What should you do to ensure that server tasks associated with a particular schedule run one-at-a-time?

- A. Set Default priority to 0
- **B. Set Execution to Serial**
- C. Set Frequency to Hourly
- D. Set Execution to Parallel

Answer: B

Explanation:

In Tableau Server, schedules manage tasks such as extract refreshes and subscriptions. The execution mode of a schedule determines how tasks within that schedule are processed by the Background process:

* Parallel: Tasks run simultaneously (up to the Background process's capacity), which is the default setting.

* Serial: Tasks run one-at-a-time in sequence, ensuring that one task completes before the next begins.

To ensure tasks associated with a particular schedule run one-at-a-time, you must configure the schedule's execution mode to Serial. This is done in the Tableau Server web interface:

* Go to Schedules.

* Select the schedule, click Actions > Edit Schedule.

* Under Execution, choose Serial instead of Parallel.

- * Option A (Set Execution to Serial): Correct. This directly addresses the requirement by forcing tasks to execute sequentially.
 - * Option B (Set Default priority to 0): Incorrect. Priority (1-100) determines the order of task execution across all schedules, not whether tasks run one-at-a-time within a single schedule. Also, 0 is not a valid priority value (minimum is 1).
 - * Option C (Set Frequency to Hourly): Incorrect. Frequency (e.g., hourly, daily) controls when the schedule runs, not how tasks within it are executed.
 - * Option D (Set Execution to Parallel): Incorrect. Parallel execution allows tasks to run simultaneously, which contradicts the requirement.
- Reference: Tableau Server Documentation - "Create or Modify a Schedule" (https://help.tableau.com/current/server/en-us/schedule_manage_create.htm).

NEW QUESTION # 42

What should you do to disable table recommendations for popular data sources and tables to users?

- A. Use the command: `tsm configuration set -k recommendations.enabled -v false`
- **B. Disable the option using the site Settings page**
- C. Publish data sources only to projects with permissions locked to the project
- D. Disable the option using the server Settings page

Answer: B

Explanation:

Table recommendations in Tableau Server suggest popular tables and data sources to users when they create new content in the web authoring environment. This feature is enabled by default but can be disabled at the site level.

Option A (Disable the option using the site Settings page): Correct. A site administrator can disable table recommendations by navigating to the site's Settings > General page in the Tableau Server web interface and unchecking the option "Enable table recommendations." This prevents users on that site from seeing these suggestions, offering a straightforward UI-based solution.

Option B (Use the command: `tsm configuration set -k recommendations.enabled -v false`): Incorrect. There is no `recommendations.enabled` key in the TSM configuration settings. This feature is managed per site, not server-wide via TSM.

Option C (Publish data sources only to projects with permissions locked): Incorrect. Locking permissions restricts access but doesn't disable the recommendation feature itself. Users with access would still see recommendations.

Option D (Disable the option using the server Settings page): Incorrect. Table recommendations are a site-specific setting, not a server-wide setting. The server Settings page (via TSM) controls global configurations, not this feature.

Reference: Tableau Server Documentation - "Manage Site Settings" (https://help.tableau.com/current/server/en-us/site_settings.htm).

NEW QUESTION # 43

.....

The price of the Analytics-Admn-201 test dumps is quite reasonable, no matter you are the students or the employees of the enterprise, you can afford it. Analytics-Admn-201 test dumps are verified by the specialists of the business, therefore the quality is ensured. Pass guarantee and money back guarantee for purchasing the Analytics-Admn-201 Test Dumps. Other questions or problem of the product can consult the live chat service staff or by email, we will reply you immediately.
