You can try the CompTIA CAS-004 exam dumps demo before purchasing. If you like our CompTIA Advanced Security Practitioner (CASP+) Exam (CAS-004) exam questions features, you can get the full version after payment. PassCollection CAS-004 Dumps give surety to confidently pass the CompTIA Advanced Security Practitioner (CASP+) Exam (CAS-004) exam on the first attempt.

CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q158-Q163):

NEW QUESTION # 158
Ransomware encrypted the entire human resources fileshare for a large financial institution.
Security operations personnel were unaware of the activity until it was too late to stop it. The restoration will take approximately four

hours, and the last backup occurred 48 hours ago. The management team has indicated that the RPO for a disaster recovery event for this data classification is 24 hours. Based on RPO requirements, which of the following recommendations should the management team make?

- A. Decrease the frequency of backups and pay the ransom to decrypt the data.
- B. Leave the current backup schedule intact and make the human resources fileshare read-only.
- C. Leave the current backup schedule intact and pay the ransom to decrypt the data.
- D. Increase the frequency of backups and create SIEM alerts for IOCs.

Answer: D

Explanation:
It is not advisable to pay the ransom in a ransomware attack, as this only encourages the attackers and does not guarantee that the data will actually be decrypted. Instead, the management team should consider increasing the frequency of backups to meet the RPO requirements for the human resources fileshare. Additionally, implementing SIEM alerts for indicators of compromise (IOCs) can help to detect and prevent future ransomware attacks.

NEW QUESTION # 159
A systems administrator at a web-hosting provider has been tasked with renewing the public certificates of all customer sites. Which of the following would BEST support multiple domain names while minimizing the amount of certificates needed?

- A. CA
- B. ocsp
- C. CRL
- D. SAN

Answer: D

Explanation:
The administrator should use SAN certificates to support multiple domain names while minimizing the amount of certificates needed. SAN stands for Subject Alternative Name, which is an extension of a certificate that allows it to include multiple fully-qualified domain names (FQDNs) within the same certificate. For example, a SAN certificate can secure www.example.com, www.example.net, and mail.example.org with one certificate. SAN certificates can reduce the cost and complexity of managing multiple certificates for different domains. SAN certificates can also support wildcard domains, such as *.example.com, which can cover any subdomain under that domain. Verified Reference:

NEW QUESTION # 160
A financial institution has several that currently employ the following controls:
- The severs follow a monthly patching cycle.
- All changes must go through a change management process.
- Developers and systems administrators must log into a jumpbox to
access the servers hosting the data using two-factor authentication.
- The servers are on an isolated VLAN and cannot be directly accessed
from the internal production network.
An outage recently occurred and lasted several days due to an upgrade that circumvented the approval process. Once the security team discovered an unauthorized patch was installed, they were able to resume operations within an hour. Which of the following should the security administrator recommend to reduce the time to resolution if a similar incident occurs in the future?

- A. Implement file integrity monitoring with automated alerts on the servers.
- B. Enhanced audit logging on the jump servers and ship the logs to the SIEM.
- C. Disable automatic patch update capabilities on the servers
- D. Require more than one approver for all change management requests.

Answer: A

NEW QUESTION # 161

Which of the following terms refers to the delivery of encryption keys to a CASB or a third-party entity?

- A. Key recovery
- B. Key distribution
- C. Key sharing
- D. Key escrow

Answer: D

Explanation:
Key escrow is a process that involves storing encryption keys with a trusted third party, such as a CASB (Cloud Access Security Broker) or a government agency. Key escrow can enable authorized access to encrypted data in case of emergencies, legal issues, or data recovery. However, key escrow also introduces some risks and challenges, such as trust, security, and privacy. NEW QUESTION # 162

A security analyst needs to recommend a remediation to the following threat:

```
GET http://comptia.com/casp/search.php?q=ngcrc
GET http://comptia.com/casp/..%5../Windows/System32/cmd.exe?/c+sql+s:\
POST http://comptia.com/casp/login.asp
GET http://comptia.com/casp/user=54x90211z
```

Which of the following actions should the security analyst propose to prevent this successful exploitation?

- A. Patch the system.
- B. Enable TLS 1.2.
- C. Install a host-based firewall.
- D. Update the antivirus.

Answer: B

NEW QUESTION # 163

......

If you want to get CAS-004 certification and get hired immediately, you've come to the right place. PassCollection offers you the best exam dump for CAS-004 certification. With the guidance of no less than seasoned CAS-004 professionals, we have formulated updated actual questions for CAS-004 Certified exams, over the years. To keep our questions up to date, we constantly review and revise them to be at par with the latest CAS-004 syllabus for CAS-004 certification.

Latest CAS-004 Test Practice: https://www.passcollection.com/CAS-004_real-exams.html
