## NICET ITFAS-Level-1 Dumps PDF To Gain Brilliant Result (2026)

Our ITFAS-Level-1 practice questions are carefully compiled by our professional experts to be sold all over the world. So the content should be easy to be understood. The difficult questions of the ITFAS-Level-1 exam materials will have vivid explanations. So you will have a better understanding after you carefully see the explanations. At the same time, our ITFAS-Level-1 Real Exam just needs to cost you a few spare time. After about twenty to thirty hours' practice, you can completely master all knowledge.

## NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q81-Q86):

### NEW QUESTION # 81

In private mode systems, what is the audibility requirement?

- A. 10 dBA above ambient
- B. 15 dBA above ambient
- C. Minimum 75 dBA
- D. Minimum 85 dBA

**Answer: A**

Explanation:

Private mode signaling is used in locations not open to the public (e.g., hospitals, certain office buildings).

The audibility requirement for private mode differs from public mode.

NFPA 72 (2022), Section 18.4.5.3:

"For private mode audible appliances, the sound level shall be at least 10 dBA above the average ambient sound level..." This ensures the signal is heard clearly in the intended space without exceeding what's necessary.

Correct answer: C. 10 dBA above ambient

## NEW QUESTION # 82

Which NFPA standard regulates how to perform the test of engine driven generator?

- A. NFPA 72
- B. NFPA 101
- C. NFPA 70
- D. NFPA 110

**Answer: D**

Explanation:

Engine-driven generators used for emergency power are not governed directly by NFPA 72. Instead, their installation and testing requirements are found in:

NFPA 110 - Standard for Emergency and Standby Power Systems

NFPA 110 (2022), Chapter 8 details how engine-driven generators must be tested, including runtime, load testing, and maintenance intervals.

NFPA 72 references NFPA 110 whenever standby/emergency power is used for fire alarm systems.

Correct answer: D. NFPA 110

## NEW QUESTION # 83

Within what time limit shall a sprinkler waterflow alarm-initiating device activate?

- A. 120 seconds
- B. 180 seconds
- C. 100 seconds
- D. 90 seconds

**Answer: A**

Explanation:

NFPA 72 defines a time requirement for how quickly a waterflow switch must respond when a sprinkler system activates. The waterflow initiating device (typically a paddle-type switch) must send an alarm within

90 seconds, but the system may have a retard delay of up to 90 seconds, making the total allowable time 120 seconds.

NFPA 72 (2022), Section 17.13.2:

"Waterflow alarm-initiating devices shall be set to operate within 90 seconds after the flow begins. Retard devices shall not delay the signal more than an additional 90 seconds." Thus, the maximum total activation time is:

90 seconds operation + 90 seconds retard = 120 seconds max

Correct answer: C. 120 seconds

## NEW QUESTION # 84

An abnormal condition where a system, component, or function is out of order, and the condition can result in the system or unit not functioning when required is called which of the following terms?

- A. Impairment
- B. Operational
- C. Supervisory
- D. Intermittent

**Answer: A**

Explanation:

An impairment is a formal condition defined in NFPA 72 when a system or portion of it is not functional and may fail during an emergency. This is a critical safety concern.

NFPA 72 (2022), Section 3.3.149 - Impairment (Fire Alarm Systems):

"A condition where a fire protection or life safety system or a portion thereof is out of service." Also supported by Section 10.21.1: Which details handling of system impairments and the need for proper management, notification, and restoration.

Correct answer: A. Impairment

### NEW QUESTION # 85

When testing a room temperature switch, below what temperature does the off-normal signal occur?

- A. 50 °F (10.0 °C)
- B. 45 °F (7.2 °C)
- C. 40 °F (4.4 °C)
- D. 32 °F (0.0 °C)

**Answer: C**

Explanation:

Room temperature switches are used to detect freezing conditions in environments such as sprinkler valve rooms. An off-normal (supervisory) condition is triggered if the temperature drops below 40 °F (4.4 °C).

NFPA 72 (2022), Section A.17.16.1.1:

"Low-temperature supervisory signals shall be initiated when the temperature falls below 40 °F (4.4 °C) unless otherwise specified." This signal helps prevent system damage or failure due to freezing.

Correct answer: B. 40 °F (4.4 °C)

### NEW QUESTION # 86
