Our Order-Management-Administrator Study Materials combine the knowledge with the new technology, which could greatly inspire your motivation. And if you click on our Order-Management-Administrator practice

questions, you will feel the convenience.

## Salesforce Order Management Administrator Accredited Professional Sample Questions (Q64-Q69):

### NEW QUESTION # 64

An administrator is configuring delivery methods. What two types of records need to be created?

- A. Order Delivery Method
- B. Product
- C. Product Summary
- D. Delivery Method
- E. Order Delivery Summary

**Answer: A,D**

Explanation:

The Order Delivery Method and Delivery Method objects are used to configure delivery methods for orders.

A delivery method is a way of delivering an order to a customer, such as standard shipping, express shipping, or in-store pickup. A Delivery Method record defines the name, description, type, and cost of a delivery method. An Order Delivery Method record associates an order with a delivery method and stores additional information such as the delivery address, tracking number, and status. References: Order Management Objects, [Delivery Methods]

### NEW QUESTION # 65

An administrator has created a new currency field on the Fulfillment Order object and wants to roll up the total to the Order Summary object. When creating a rollup field on the Order Summary object, Fulfillment Order does not appear as an option. Why is this?

- A. The Order Summary object has reached the limit of Rollup Summary fields
- B. Rollup Fields cannot sum Currency Fields
- C. The Order Summary field on the Fulfillment Order object is a Lookup
- D. The Rollup Summary field must be created on the Fulfillment Order object with the Order Summary object as the parent

**Answer: C**

Explanation:

The reason why Fulfillment Order does not appear as an option when creating a rollup field on the Order Summary object is that the Order Summary field on the Fulfillment Order object is a Lookup. A Lookup field is a type of custom field that creates a relationship between two objects, but does not support rollup summary fields. To create a rollup summary field, the relationship between the objects must be master-detail, which means that the child record cannot exist without its parent record. Verified References:

### NEW QUESTION # 66

Which three components can be used to modify the user experience in the Order Summary detail page?

- A. Accordion
- B. Related List - Double
- C. Tabs
- D. Related List-Single

**Answer: A,C,D**

Explanation:

Three components that can be used to modify the user experience in the Order Summary detail page are:

Tabs. Tabs are a type of component that allow users to switch between different views or subpages on a record page. Tabs can contain other components, such as charts, reports, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize tabs on the Order Summary detail page to give users more options and flexibility.

Accordion. Accordion is a type of component that allow users to expand and collapse sections of a record page. Accordion can contain other components, such as fields, related lists, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize accordion on the Order Summary detail page to give users more control and visibility.

Related List-Single. Related List-Single is a type of component that displays a single related list for a record.

A related list is a list of records that are linked to another record by a relationship field, such as lookup or master-detail. The administrator can use the Lightning App Builder to add and customize related list-single on the Order Summary detail page to give users more access and context.

#### NEW QUESTION # 67

In which two ways can order management license be assigned? (choose 2)

- A. By permission set
- B. By user
- C. By profile
- D. By role

**Answer: A,B**

#### NEW QUESTION # 68

Which three statements are true about change sets?

- A. Changes can be deployed to any instance of Salesforce as long as the destination has approved it
- B. A change request should be created when the admin wants to send customizations from the current org to another org
- C. Change sets can contain only modifications made through the Setup menu
- D. Sending a change set between two orgs requires a deployment connection
- E. Change sets can only be sent between orgs that are affiliated with a production org

**Answer: C,D,E**

Explanation:

Explanation

Three statements that are true about change sets are:

Sending a change set between two orgs requires a deployment connection. A deployment connection is a link between two orgs that allows one org to send change sets to another org.

Change sets can only be sent between orgs that are affiliated with a production org. A production org is an org that is used for live operations and data, and it can have one or more sandbox orgs that are used for development and testing. Change sets can only be sent from a sandbox org to its associated production org, or from one sandbox org to another sandbox org that shares the same production org.

Change sets can contain only modifications made through the Setup menu. A change set is a collection of metadata components that can be deployed from one org to another. Metadata components are customizations that are made through the Setup menu, such as custom objects, fields, workflows, etc.
