Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q152-Q157):

NEW QUESTION # 152
A Solutions Architect must select the storage type tor a big data application that requires very high sequential I/O. The data must persist if the instance is stopped. Which of the following storage types will provide the best fit at the LOWEST cost for the application?

- A. An Amazon EBS throughput optimized HDD volume
- B. An Amazon EBS general purpose SSD volume
- C. An Amazon EC2 instance store local SSD volume
- D. An Amazon EBS provisioned IOPS SSD volume

Answer: A

NEW QUESTION # 153
You have been asked to build AWS infrastructure for disaster recovery for your local applications and within that you should use an AWS Storage Gateway as part of the solution. Which of the following best describes the function of an AWS Storage Gateway?

- A. A web service that speeds up distribution of your static and dynamic web content.
- B. Connects an on-premises software appliance with cloud-based storage to provide seamless and secure integration between your on-premises IT environment and AWS's storage infrastructure.
- C. Is a storage service optimized for infrequently used data, or "cold data."
- D. Accelerates transferring large amounts of data between the AWS cloud and portable storage devices .

Answer: B

Explanation:
AWS Storage Gateway connects an on-premises software appliance with cloud-based storage to provide seamless integration with data security features between your on-premises IT environment and the Amazon Web Services (AWS) storage infrastructure. You can use the service to store data in the AWS cloud for scalable and cost-effective storage that helps maintain data security. AWS Storage Gateway offers both volume-based and tape-based storage solutions:
Volume gateways
Gateway-cached volumes
Gateway-stored volumes
Gateway-virtual tape library (VTL)

NEW QUESTION # 154
A company wants to migrate an on-premises legacy application to AWS. The application ingests customer order files from an on-premises enterprise resource planning (ERP) system. The application then uploads the files to an SFTP server. The application uses a scheduled job that checks for order files every hour.
The company already has an AWS account that has connectivity to the on-premises network. The new application on AWS must support integration with the existing ERP system. The new application must be secure and resilient and must use the SFTP protocol to process orders from the ERP system immediately.
Which solution will meet these requirements?

- A. Create an AWS Transfer Family SFTP internet-facing server in one Availability Zone. Use Amazon Elastic File System (Amazon EFS) storage. Create an AWS Lambda function to process order files. Use a Transfer Family managed workflow

to invoke the Lambda function.

- B. Create an AWS Transfer Family SFTP internal server in two Availability Zones. Use Amazon S3 storage. Create an AWS Lambda function to process order files. Use a Transfer Family managed workflow to invoke the Lambda function.
- C. Create an AWS Transfer Family SFTP internal server in two Availability Zones. Use Amazon Elastic File System (Amazon EFS) storage. Create an AWS Step Functions state machine to processorder files. Use Amazon EventBridge Scheduler to invoke the state machine to periodically check Amazon EFS for order files.
- D. Create an AWS Transfer Family SFTP internet-facing server in two Availability Zones. Use Amazon S3 storage. Create an AWS Lambda function to process order files. Use S3 Event Notifications to send s3: ObjectCreated: * events to the Lambda function.

Answer: B

Explanation:

This solution meets the requirements because it uses the following components and features:

AWS Transfer Family SFTP internal server: This allows the application to securely transfer order files from the on-premises ERP system to AWS using the SFTP protocol over a private connection. The internal server is deployed in two Availability Zones for high availability and fault tolerance.

Amazon S3 storage: This provides scalable, durable, and cost-effective object storage for the order files.

Amazon S3 also supports encryption at rest and in transit, as well as lifecycle policies and versioning for data protection and compliance.

AWS Lambda function: This enables the application to process the order files in a serverless manner, without provisioning or managing servers. The Lambda function can perform any custom logic or transformation on the order files, such as validating, parsing, or enriching the data.

Transfer Family managed workflow: This simplifies the orchestration of the file processing tasks by triggering the Lambda function as soon as a file is uploaded to the SFTP server. The managed workflow also provides error handling, retry policies, and logging capabilities.

NEW QUESTION # 155

A company operates a website on Amazon EC2 Linux instances Some of the instances are failing Troubleshooting points to insufficient swap space on the failed instances The operations team lead needs a solution to monitor this What should a solutions architect recommend"?

- A. Use EC2 metadata to collect information, then publish it to Amazon CloudWatch custom metrics Monitor SwapUsage metrics in CloudWatch
- B. Install an Amazon CloudWatch agent on the instances Run an appropriate script on a set schedule Monitor SwapUtilization metrics in CloudWatch
- C. Enable detailed monitoring in the EC2 console Create an Amazon CloudWatch Swaputilization custom metric Monitor SwapUtilization metrics in CloudWatch
- D. Configure an Amazon CloudWatch SwapUsage metric dimension Monitor the SwapUsage dimension in the EC2 metrics in CloudWatch

Answer: D

NEW QUESTION # 156

A company wants to create a payment processing application. The application must run when a payment record arrives in an existing Amazon S3 bucket. The application must process each payment record exactly once. The company wants to use an AWS Lambda function to process the payments.

Which solution will meet these requirements?

- A. Configure the existing S3 bucket to send object creation events to an Amazon Simple Queue Service (Amazon SQS) queue. Configure the Lambda function to run when a new event arrives in the SQS queue.
- B. Configure the existing S3 bucket to send object creation events directly to the Lambda function.
  Configure the Lambda function to handle object creation events and to process the payments.
- C. Configure the existing S3 bucket to send object creation events to Amazon EventBridge. Configure EventBridge to route events to an Amazon Simple Queue Service (Amazon SQS) FIFO queue.
  Configure the Lambda function to run when a new event arrives in the SQS queue.
- D. Configure the existing S3 bucket to send object creation events to an Amazon Simple Notification Service (Amazon SNS) topic. Configure the Lambda function to run when a new event arrives in the SNS topic.

Answer: D
