Knowledge Fortinet FCP_FCT_AD-7.4 Points & Valid Dumps FCP_FCT_AD-7.4 Free

If you want to success in your career as a Fortinet Certified Professional, you must think outside the box. It would be beneficial if you considered adding FCP - FortiClient EMS 7.4 Administrator to your resume. To get this certification, you must pass the FCP_FCT_AD-7.4 exam conducted by Fortinet. Passing the FCP - FortiClient EMS 7.4 Administrator exam will help you advance your career. It is not an easy task to pass the FCP - FortiClient EMS 7.4 Administrator certification exam on the first attempt, but now SurePassExams is here to help. To assist you with remote study, SurePassExams provides Fortinet FCP_FCT_AD-7.4 Exam Questions to make your test preparation complete. The Fortinet FCP_FCT_AD-7.4 exam questions simulate the actual exam pattern, allowing you to pass the FCP - FortiClient EMS 7.4 Administrator certification exam the first time.

Now you have all the necessary information about quick FCP - FortiClient EMS 7.4 Administrator (FCP_FCT_AD-7.4) exam questions preparation. Just take the best decision of your career and enroll in the Fortinet FCP_FCT_AD-7.4 Exam. Download the Fortinet FCP_FCT_AD-7.4 exam real dumps now and start this career advancement journey.

Valid Dumps FCP_FCT_AD-7.4 Free | FCP_FCT_AD-7.4 Latest Exam Online

The Fortinet FCP_FCT_AD-7.4 certification exam offers a great opportunity to advance your career. With the FCP - FortiClient EMS 7.4 Administrator certification exam beginners and experienced professionals can demonstrate their expertise and knowledge. After passing the FCP - FortiClient EMS 7.4 Administrator (FCP_FCT_AD-7.4) exam you can stand out in a crowded job market. The FCP - FortiClient EMS 7.4 Administrator (FCP_FCT_AD-7.4) certification exam shows that you have taken the time and effort to learn the necessary skills and have met the standards in the market.

Fortinet FCP - FortiClient EMS 7.4 Administrator Sample Questions (Q21-Q26):

NEW QUESTION # 21
An administrator has lost web access to the FortiClient EMS console, and the web page to access to the console is timing out. How can the administrator gather information to investigate the issue? (Choose one answer)

- A. Download the webserver logs from the PostgreSQL server.
- B. Use the diagnostic logs option from the FortiClient EMS GUI.
- C. Use the CLI diagnostic tool on the EMS server.
- D. Download the log generator from the support site and run it on the EMS server.

Answer: C

Explanation:
According to the FortiClient EMS Administrator Study Guide and official Technical Tips from Fortinet, when the web console is inaccessible (e.g., timing out), the administrator must use tools available directly on the server's operating system (CLI) to gather diagnostic information.
1. Why the CLI Diagnostic Tool (Answer A) is the Correct Choice:
* Availability during Outage: When the GUI is unreachable, the standard "Generate Diagnostic Logs" option within the EMS interface is also unavailable.
* Windows-based EMS: The administrator can manually run the EMSDiagnosticTool.exe located at C:
\Program Files (x86)\Fortinet\FortiClientEMS\. This tool collects server information, Windows events, and EMS-specific logs into a compressed file for investigation.
* Linux-based EMS (v7.4+): For newer versions running on Linux, the administrator can use the CLI command: sudo /opt/forticlientems/bin/diagnostic_tool -o /tmp/diag to generate a diagnostic package.
* Service Verification: The CLI also allows administrators to verify if critical services (like fcems, apache2, or postgres) are running or if remote access has been disabled using the emscli utility.
2. Why Other Options are Incorrect:
* B. Download webserver logs from PostgreSQL: PostgreSQL is the database engine for EMS, not the web server. While database logs are useful, they are not the primary method for gathering general
"diagnostic information" and would typically be collected as part of the CLI diagnostic tool output rather than downloaded directly from the DB.
* C. Diagnostic logs option from the GUI: This option is impossible to use if the administrator has lost web access and the page is timing out.
* D. Download log generator from support site: While Fortinet provides various tools on their support site, the EMS Diagnostic Tool is natively installed with the FortiClient EMS software and is the primary, documented method for troubleshooting the EMS server itself.

NEW QUESTION # 22
An administrator configures ZTNA configuration on the FortiGate. Which statement is true about the firewall policy?

- A. It uses the access proxy.
- B. It defines ZTNA server.
- C. It only uses ZTNA tags to control access for endpoints.
- D. It redirects the client request to the access proxy.

Answer: D

Explanation:
"The firewall policy matches and redirects client requests to the access proxy VIP"https://docs.fortinet.com /document/fortigate/7.0.0/new-features/194961/basic-ztna-configuration

NEW QUESTION # 23
Which two statements are true about the ZTNA rule? (Choose two.)

- A. It defines the access proxy.
- B. It applies security profiles to protect traffic
- C. It enforces access control.
- D. It applies SNAT to protect traffic.

Answer: B,C

Explanation:
* Understanding ZTNA Rule Configuration:
* The ZTNA rule configuration shown in the exhibit defines how traffic is managed and controlled based on specific tags and conditions.
* Evaluating Rule Components:
* The rule includes security profiles to protect traffic by applying various security checks (A).
* The rule also enforces access control by determining which endpoints can access the specified resources based on the ZTNA tag (D).

* Eliminating Incorrect Options:
* SNAT (Source Network Address Translation) is not mentioned as part of this ZTNA rule.
* The rule does not define the access proxy but uses it to enforce access control.
* Conclusion:
* The correct statements about the ZTNA rule are that it applies security profiles to protect traffic (A) and enforces access control (D).
References:
ZTNA rule configuration documentation from the study guides.

NEW QUESTION # 24

Which two VPNtypes can a FortiClientendpoint user inmate from the Windows command prompt? (Choose two)

- A. L2TP
- B. IPSec
- C. PPTP
- D. SSL VPN

Answer: B,D

NEW QUESTION # 25

An administrator must deploy FortiClient for an organization that has BYOD and remote users.
What can the administrator use to deploy FortiClient? (Choose one answer)

- A. Group Policy Object (GPO)
- B. FortiClient zero-touch provisioning
- C. Microsoft Intune
- D. Microsoft System Center Configuration Manager (SCCM)

Answer: C

Explanation:
According to theFortiClient EMS Administrator Study Guideand theFortinet Document Library (7.2/7.4 versions), the most effective method for deploying FortiClient toBYOD (Bring Your Own Device)and remote usersis usingMicrosoft Intune(or other supported Mobile Device Management - MDM solutions).
1. Why Microsoft Intune (Answer C) is the Correct Choice:
* Cloud-Based Accessibility:Unlike GPO or SCCM, which traditionally require a direct connection to the local Active Directory (AD) domain or a VPN to reach the on-premises infrastructure, Microsoft Intune is a cloud-based MDM. This makes it the native choice forremote userswho may not always be on the corporate network.
* BYOD Management:Intune is specifically designed to manage a variety of operating systems (Windows, macOS, iOS, Android) that are common in BYOD environments. It allows administrators to push the FortiClient installation package and enrollment configuration (such as the invitation_code or ems_server details) directly to the user's device via the cloud.
* Integration with EMS:FortiClient EMS 7.2/7.4 provides specific documentation forIntune Integration. Administrators can create a custom MSI or .pkg installer in EMS, upload it to Intune, and use Intune's app configuration policies to automate the Telemetry connection to EMS.
2. Why Other Options are Incorrect for this Scenario:
* A. FortiClient zero-touch provisioning:While FortiClient supports zero-touch provisioning (particularly for mobile or through FortiCloud), in the context of a "deployment tool" for an organization's broad BYOD and remote fleet, it is typically afeatureorprocessfacilitated by an MDM like Intune rather than the standalone deployment mechanism for the initial software package on third- party remote devices.
* B. Microsoft SCCM:SCCM (now part of Microsoft Configuration Manager) is heavily reliant on on- premises infrastructure and is generally used for corporate-owned, domain-joined devices. It is less flexible than Intune for managing "unmanaged" BYOD devices belonging to remote users.
* D. Group Policy Object (GPO):GPO requires the device to be joined to theActive Directory (AD) Domain. BYOD devices are typically not domain-joined, and remote devices cannot receive GPO updates unless they are connected via VPN at the time of the policy refresh, making it unsuitable for this specific use case.
3. Curriculum References:
* EMS Administration Guide (Deployment Section):Specifies that for endpoints not reachable via AD
/Workgroups (which covers remote and BYOD), administrators should use theInstaller Linkmethod or anMDM (like Microsoft Intune).

* Intune Deployment Guide for FortiClient:Detail the specific use of Configuration Keys(e.g., cloud_invite_code, ems_server) that are passed from Intune to the FortiClient app to ensure that once the remote user installs the app, it automatically registers to the correct EMS instance.

NEW QUESTION # 26
