There are detailed explanations for some difficult questions in our CAD exam practice. Consequently, with the help of our study materials, you can be confident that you will pass the exam and get the related certification as easy as rolling off a log. So what are you waiting for? Just take immediate action to buy our CAD learning guide!

ServiceNow CAD Exam is a valuable certification for developers who want to demonstrate their expertise in building and maintaining applications on the ServiceNow platform. Certified Application Developer-ServiceNow certification can help professionals stand out in a crowded job market and increase their earning potential. Additionally, the certification provides developers with access to a network of other certified professionals and resources, including ongoing education and training opportunities.

## ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q58-Q63):

### NEW QUESTION # 58

Which of the following methods are useful in Access Control scripts?

- A. `g_user.hasRole()` and `current.isNew()`
- B. `g_user.hasRole()` and `current.isNewRecord()`
- C. `gs.hasRole()` and `current.isNewRecord()`
- D. `gs.hasRole()` and `current.isNew()`

**Answer: C**

Explanation:

Access Control scripts are server-side scripts that run when an Access Control rule is evaluated. They can use the `gs` and `current` objects to access the `GlideSystem` and `GlideRecord` methods, respectively. Some of the useful methods in Access Control scripts are:

\* `gs.hasRole()` - This method checks if the current user has a specified role. It returns true if the user has the role, and false otherwise. For example, `gs.hasRole('admin')` will return true if the user is an administrator, and false otherwise.

\* `current.isNewRecord()` - This method checks if the current record is a new record that has not been inserted into the database yet. It returns true if the record is new, and false otherwise. For example, `current.isNewRecord()` will return true if the record is being created, and false if the record is being updated or deleted.

The methods `g_user.hasRole()` and `current.isNew()` are not part of the server-side scripting API. They are part of the client-side scripting API, which is used in Client Scripts and UI Policies. They cannot be used in Access Control scripts.

### NEW QUESTION # 59

If you create a SOAP Message, what syntax indicates a variable to pass when the function is called?

- A. `S{variable_name}`
- B. `< variable_name >.do?WSDL`
- C. `current.variable_name`
- D. `< variable_name >`

**Answer: A**

Explanation:

In the SOAP Message feature set, we indicate variables using the following syntax: `S{variable_name}`. This allows us to pass a variable with the specified name from the SOAP message record to the web service function.
