Prep Professional-Cloud-Security-Engineer Guide, Professional-Cloud-Security-Engineer Latest Test Dumps

Passing the Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) exam can be a challenging task, especially if you have a tight schedule. You need comprehensive exam questions to prepare well for the exam. In this article, we will introduce you to Exam4Docs Google Professional-Cloud-Security-Engineer Exam Questions that offer relevant and reliable exam materials for your Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) exam preparation.

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample

Questions (Q18-Q23):

NEW QUESTION # 18

As adoption of the Cloud Data Loss Prevention (DLP) API grows within the company, you need to optimize usage to reduce cost. DLP target data is stored in Cloud Storage and BigQuery. The location and region are identified as a suffix in the resource name. Which cost reduction options should you recommend?

- A. Set appropriate rowsLimit value on BigQuery data hosted outside the US, and minimize transformation units on multiregional Cloud Storage buckets.
- B. Set appropriate rowsLimit value on BigQuery data hosted outside the US and set appropriate bytesLimitPerFile value on multiregional Cloud Storage buckets.
- C. Use rowsLimit and bytesLimitPerFile to sample data and use CloudStorageRegexFileSet to limit scans.
- D. Use FindingLimits and TimespanConfig to sample data and minimize transformation units.

Answer: C

Explanation:

<https://cloud.google.com/dlp/docs/inspecting-storage#sampling> https://cloud.google.com/dlp/docs/best-practices-costs#limit_scans_of_files_in_to_only_relevant_files

NEW QUESTION # 19

You are a member of the security team at an organization. Your team has a single GCP project with credit card payment processing systems alongside web applications and data processing systems. You want to reduce the scope of systems subject to PCI audit standards.

What should you do?

- A. Move the cardholder data environment into a separate GCP project.
- B. Use multi-factor authentication for admin access to the web application.
- C. Use only applications certified compliant with PA-DSS.
- D. Use VPN for all connections between your office and cloud environments.

Answer: A

Explanation:

To reduce the scope of systems subject to PCI audit standards, segregate the cardholder data environment (CDE) into a separate GCP project. This ensures that only the project containing the CDE will be subject to PCI DSS compliance, reducing the audit scope for other projects.

* Create Separate GCP Project:

* Go to the Cloud Console, navigate to IAM & Admin > Manage Resources.

* Click "Create Project" and set up a new project for the CDE.

* Migrate CDE:

* Transfer the systems processing, storing, or transmitting cardholder data to the new project.

* Apply PCI DSS Controls:

* Implement PCI DSS required controls on the new project.

* Use appropriate security measures such as firewalls, access controls, and encryption.

* Creating and Managing Projects

NEW QUESTION # 20

You run applications on Cloud Run. You already enabled container analysis for vulnerability scanning. However, you are concerned about the lack of control on the applications that are deployed. You must ensure that only trusted container images are deployed on Cloud Run.

What should you do?

Choose 2 answers

- A. Use Cloud Run breakglass to deploy an image that meets the Binary Authorization policy by default.
- B. Set the organization policy constraint constraints/run.allowedBinaryAuthorizationPolicie to the list of allowed Binary Authorization policy names.

- C. Enable Binary Authorization on the existing Kubernetes cluster.
- D. Set the organization policy constraint constraints/compute.trustedimageProjects to the list of projects that contain the trusted container images.
- E. Enable Binary Authorization on the existing Cloud Run service.

Answer: B,E

NEW QUESTION # 21

When working with agents in a support center via online chat, an organization's customers often share pictures of their documents with personally identifiable information (PII). The organization that owns the support center is concerned that the PII is being stored in their databases as part of the regular chat logs they retain for review by internal or external analysts for customer service trend analysis.

Which Google Cloud solution should the organization use to help resolve this concern for the customer while still maintaining data utility?

- A. Use Object Lifecycle Management to make sure that all chat records with PII in them are discarded and not saved for analysis.
- B. Use the generalization and bucketing actions of the DLP API solution to redact PII from the texts before storing them for analysis.
- C. Use Cloud Key Management Service (KMS) to encrypt the PII data shared by customers before storing it for analysis.
- D. Use the image inspection and redaction actions of the DLP API to redact PII from the images before storing them for analysis.

Answer: B

NEW QUESTION # 22

You are a member of the security team at an organization. Your team has a single GCP project with credit card payment processing systems alongside web applications and data processing systems. You want to reduce the scope of systems subject to PCI audit standards.

What should you do?

- A. Move the cardholder data environment into a separate GCP project.
- B. Use multi-factor authentication for admin access to the web application.
- C. Use only applications certified compliant with PA-DSS.
- D. Use VPN for all connections between your office and cloud environments.

Answer: A
