Amazon SOA-C02 Latest Test Simulator, SOA-C02 Instant Discount

Here in this Desktop practice test software, the AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) practice questions given are very relevant to the actual AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) exam. It is compatible with Windows computers. Pass4sures provides its valued customers with customizable AWS Certified

SysOps Administrator - Associate (SOA-C02) (SOA-C02) practice exam sessions. The AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) practice test software also keeps track of the previous Amazon SOA-C02 practice exam attempts.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q220-Q225):

NEW QUESTION # 220
A company has a non-production application that runs on an Amazon EC2 instance. The Amazon CloudWatch agent is installed on the EC2 instance. The application includes a process that randomly overuses temporary disk space and fills disks to 100% capacity. A SysOps administrator needs to automate a reboot of the EC2 instance after the disks reach 100% capacity.
Which solution will meet this requirement in the MOST operationally efficient way?

- A. Create a CloudWatch alarm for the EC2 instance. Create an Amazon EventBridge event rule that reacts to the CloudWatch alarm and reboots the EC2 instance.
- B. Create an AWS Lambda function to reboot the EC2 instance. Use EC2 health checks to invoke the Lambda function.
- C. Create an AWS Lambda function to reboot the EC2 instance. Create a CloudWatch alarm that uses Amazon EventBridge to invoke the Lambda function.
- D. Create a CloudWatch alarm for the EC2 instance. Create an Amazon Simple Email Service (Amazon SES) notification that reacts to the. CloudWatch alarm and reboots the EC2 instance.

Answer: A

Explanation:
Create a CloudWatch alarm on the disk-usage metric. When it breaches (100%), an EventBridge rule triggered by the alarm state change can call the EC2 Reboot action - automating the reboot without custom code, and with minimal operational effort.

NEW QUESTION # 221
A company has two general purpose Amazon EC2 instances that run a software package. Each EC2 instance is attached to its own 500 GiB General Purpose SSD (gp2) Amazon Elastic Block Store (Amazon EBS) volume.
Each EBS volume frequently reaches its IOPS limit, negatively affecting workload performance.
The company is starting a large promotion that will require 5 times more IOPS. The software package requires durable storage for each EC2 instance.
Which solution will meet these requirements?

- A. Migrate the workload to two storage optimized EC2 instances.
- B. Migrate the attached EBS volumes to Throughput Optimized HDD (st1) EBS volumes.
- C. Configure Amazon ElastiCache integration on the EC2 instances.
- D. Migrate the attached EBS volumes to General Purpose SSD (gp3) EBS volumes. Provision the appropriate IOPS.

Answer: D

NEW QUESTION # 222
A company is using Amazon Elastic File System (Amazon EFS) to share a file system among several Amazon EC2 instances.
As usage increases, users report that file retrieval from the EFS file system is slower than normal.
Which action should a SysOps administrator take to improve the performance of the file system?

- A. Resize the Amazon Elastic Block Store (Amazon EBS) volume of each of the EC2 instances.
- B. Identify any unused files in the file system, and remove the unused files.
- C. Enable encryption in transit on the file system.
- D. Configure the file system for Provisioned Throughput.

Answer: D

NEW QUESTION # 223
A company has deployed a web application in a VPC that has subnets in three Availability Zones. The company launches three

Amazon EC2 instances from an EC2 Auto Scaling group behind an Application Load Balancer (ALB).
A SysOps administrator notices that two of the EC2 instances are in the same Availability Zone, rather than being distributed evenly across all three Availability Zones. There are no errors in the Auto Scaling group's activity history.
What is the MOST likely reason for the unexpected placement of EC2 instances?

- A. Amazon EC2 Auto Scaling randomly placed the instances in Availability Zones.
- B. One Availability Zone did not have sufficient capacity for the requested EC2 instance type.
- C. The Auto Scaling group was configured for only two Availability Zones.
- D. The ALB was configured for only two Availability Zones.

Answer: C

Explanation:
the autoscaling group is responsable to add the instances in the subnets

NEW QUESTION # 224
A SysOps administrator is deploying a test site running on Amazon EC2 instances. The application requires both incoming and outgoing connectivity to the internet.
Which combination of steps are required to provide internet connectivity to the EC2 instances? (Choose two.)

- A. Attach an Elastic IP address to the internet gateway.
- B. Create an internet gateway and attach it to a VPC.
- C. Add an entry to the route table for the subnet that points to an internet gateway.
- D. Attach a private address to the elastic network interface on the EC2 instance.
- E. Add a NAT gateway to a public subnet.

Answer: B,C

Explanation:
https://docs.aws.amazon.com/vpc/latest/userguide/VPC_Internet_Gateway.html

NEW QUESTION # 225
......

Our SOA-C02 study materials have designed three different versions for all customers to choose. The three different versions include the PDF version, the software version and the online version, they can help customers solve any questions and meet their all needs. Although the three different versions of our SOA-C02 Study Materials provide the same demo for all customers, they also have its particular functions to meet different the unique needs from all customers. The most important function of the online version of our SOA-C02 study materials is the practicality.
