SPLK-3002 Exam Questions - Splunk IT Service Intelligence Certified Admin Exam Tests & SPLK-3002 Test Guide

If you want to find a good job, you must own good competences and skillful major knowledge. So owning the SPLK-3002 certification is necessary for you because we will provide the best SPLK-3002 study materials to you. Our SPLK-3002 exam torrent is of high quality and efficient, and it can help you pass the test successfully. For the SPLK-3002 training guide we provide with you is compiled by professionals elaborately and boosts varied versions which aimed to help you learn the SPLK-3002 study materials by the method which is convenient for you. And you can pass the exam with success guaranteed.

To prepare for the SPLK-3002 Exam, candidates can take the Splunk IT Service Intelligence Fundamentals course or the Splunk IT Service Intelligence Admin course. SPLK-3002 courses provide comprehensive training in using ITSI to manage IT services, and they cover all the topics tested in the exam. Additionally, candidates can take practice exams and review the Splunk documentation to reinforce their knowledge.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q92-Q97):

NEW QUESTION # 92

Which capabilities are enabled through "teams"?

- A. Teams allow restrictions to service content in UI views.
- B. Teams restrict searches against the itsi_notable_audit index.
- C. Teams restrict notable event alert actions.
- D. Teams allow searches against the itsi_summary index.

Answer: A

Explanation:

D is the correct answer because teams allow you to restrict access to service content in UI views such as service analyzers, glass tables, deep dives, and episode review. Teams also control access to services and KPIs for editing and viewing purposes. Teams do not affect the ability to search against the itsi_summary index, restrict notable event alert actions, or restrict searches against the itsi_notable_audit index.

References: Overview of teams in ITSI

NEW QUESTION # 93

Which of the following is a recommended best practice for service and glass table design?

- A. Plan and implement services first, then build detailed glass tables.
- B. Design glass tables first to discover which KPIs are important.
- C. Always use the standard icons for glass table widgets to improve portability.
- D. Start with base searches, then services, and then glass tables.

Answer: A

Explanation:

Reference:

A is the correct answer because it is recommended to plan and implement services first, then build detailed glass tables that reflect the service hierarchy and dependencies. This way, you can ensure that your glass tables provide accurate and meaningful service-level insights. Building glass tables first might lead to unnecessary or irrelevant KPIs that do not align with your service goals.

NEW QUESTION # 94

What are valid considerations when designing an ITSI Service? (Choose all that apply.)

- A. Services, entities, and saved searches are stored in the ITSI app, while events created by KPI execution are stored in the itsi_summary index.
- B. Service access control requirements for ITSI Team Access should be considered, and appropriate teams provisioned prior to creating the ITSI Service.
- C. Backfill of a KPI should always be selected so historical data points can be used immediately and alerts based on that data can occur.
- D. Entities, entity meta-data, and entity rules should be planned carefully to support the service design and configuration.

Answer: A,B

NEW QUESTION # 95

What effects does the KPI importance weight of 11 have on the overall health score of a service?

- A. It is a minimum health indicator KPI.
- B. The service will go critical.
- C. At least 10% of the KPIs will go critical.
- D. Importance weight is unused for health scoring.

Answer: D

Explanation:

Reference:

The KPI importance weight is a value that indicates how much a KPI contributes to the overall health score of a service. The importance weight can range from 1 (lowest) to 10 (highest). The statement that applies when configuring a KPI importance weight of 11 is:

B) Importance weight is unused for health scoring. This is true because an importance weight of 11 is invalid and cannot be used for health scoring. The maximum value for importance weight is 10.

The other statements do not apply because:

A) At least 10% of the KPIs will go critical. This is not true because an importance weight of 11 does not affect the severity level of any KPIs.

C) The service will go critical. This is not true because an importance weight of 11 does not affect the health score or status of any service.

D) It is a minimum health indicator KPI. This is not true because an importance weight of 11 does not indicate anything about the minimum health level of a KPI.

NEW QUESTION # 96

What are valid ITSI Glass Table editor capabilities? (Choose all that apply.)

- A. Adding KPI metric lanes to glass tables.
- B. Correlation search creation.
- C. Creating glass tables.
- D. Service swapping configuration.

Answer: A,C,D

Explanation:

Create a glass table to visualize and monitor the interrelationships and dependencies across your IT and business services.

The service swapping settings are saved and apply the next time you open the glass table.

You can add metrics like KPIs, ad hoc searches, and service health scores that update in real time against a background that you design. Glass tables show real-time data generated by KPIs and services.

Reference:

The glass table editor is a tool that allows you to create and edit glass tables in ITSI. Some of the capabilities of the glass table editor are:

Creating glass tables from scratch or from existing templates.

Configuring service swapping on widgets to toggle displaying metrics from different services.

Adding KPI metric lanes to glass tables to show historical trends of KPI values.

The glass table editor does not support correlation search creation, which is a separate feature in ITSI that allows you to create searches that look for relationships between data points and generate notable events.
