Test C-TS470-2412 Duration | Exam C-TS470-2412 Tutorials

You can learn from your SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C-TS470-2412) practice test mistakes and overcome them before the actual SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C-TS470-2412) exam. The software keeps track of the previous SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C-TS470-2412) practice exam attempts and shows the changes of each attempt. You don't need to wait days or weeks to get your performance report. The software displays the result of the SAP C-TS470-2412 Practice Test immediately, which is an excellent way to understand which area needs more attention.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which of the following objects are relevant to determine the correct plant and storage location in service order processing when reserving spare part items? Note: There are 3 correct answers to this question.

- A. Work center
- B. Sales area
- C. Service employee
- D. Service organization
- E. Service team

Answer: A,C,D

Explanation:
In SAP S/4HANA Cloud Private Edition, Service, when reserving spare parts in service order processing (e.
g., scope item 3D2: Service Order Management and Monitoring), the system determines the plant and storage location based on specific objects:
* Service organization: This defines the organizational unit responsible for the service, which is linked to a plant. The plant is a key attribute in logistics and inventory management, making it critical for spare part reservations.
* Work center: The work center specifies where the service is performed and is directly tied to a plant. It influences the storage location from which spare parts are drawn, especially in in-house or field service scenarios.
* Service employee: The employee assigned to the service order can influence the plant and storage location, particularly in field service scenarios where parts are reserved from a technician's stock (e.g., van stock linked to a specific storage location).
* Sales area: While relevant for sales processes, it does not directly determine plant or storage location for spare parts in service order processing.
* Service team: Teams are organizational groupings but do not have a direct system linkage to plant
/storage location determination for reservations. This logic is part of the integration between service management and logistics in SAP S/4HANA, ensuring accurate inventory allocation. "The plant and storage location for spare parts in a service order are derived from the service organization, work center, and assigned service employee." (SAP Help Portal, Service Order Processing).

NEW QUESTION # 34
What is the purpose of a strategy plan in SAP S/4HANA Cloud Private Edition, Service?

- A. To document your company's direction in terms of service scenarios to be implemented
- B. To support the planning and scheduling of activities with different intervals
- C. To automatically generate Customer Service orders
- D. To support a service scenario where an activity is required every X months and Y kilometers

Answer: B

Explanation:
A strategy plan in SAP S/4HANA Cloud Private Edition, Service is a type of maintenance plan. The correct answer is C. Let's dive into this.
What is a Strategy Plan?
A strategy plan uses a maintenance strategy (e.g., time-based, performance-based cycles) to schedule tasks with varying intervals (e.g., 3 months, 6 months, 1,000 km). It's linked to a task list with operations tied to maintenance packages.
Why C?
The purpose is to support the planning and scheduling of activities with different intervals. For example, a strategy might include Package 1 (every 3 months) for an oil check and Package 2 (every 12 months) for a full inspection. The plan schedules these flexibly based on the strategy's rules.
Why Not the Others?
* A: This is a business strategy, not a maintenance plan function.
* B: This describes a multiple counter plan, not a strategy plan.
* D: Orders are generated by scheduling, not the plan's purpose.
Example:
Strategy "STR1" has packages: 3M (oil) and 12M (inspection). The plan schedules calls accordingly.
"A strategy plan supports the planning and scheduling of maintenance activities with different intervals using a maintenance strategy."

NEW QUESTION # 35
What are the benefits of maintaining bills of material (BOMs) with BOM usage 4 (Plant Maintenance)? Note:
There are 2 correct answers to this question.

- A. Spare parts planning in service order template
- B. Spare parts planning in task list
- C. Spare parts planning in service order
- D. Structuring of technical assets

Answer: B,C

Explanation:
BOM usage 4 (Plant Maintenance)in SAP S/4HANA Cloud Private Edition, Service is designed for maintenance processes, listing components (e.g., spare parts) for technical objects. The correct benefits are spare parts planning in task list (C)andspare parts planning in service order (D). Let's break this down thoroughly.
What is BOM Usage 4?
A BOM with usage 4 is linked to equipment or functional locations, defining parts needed for maintenance (e.
g., bolts, filters). It's maintained in transactions like IB01/IB02.
* Spare parts planning in task list (C):When a task list (e.g., for pump maintenance) references a technical object with a BOM usage 4, the BOM's components are pulled into the task list operations as planned spare parts. This ensures materials are reserved or ordered in advance. For example, Operation
0010 might list "Gasket" from the BOM.
* Spare parts planning in service order (D):A service order linked to a technical object inherits the BOM usage 4 components, enabling spare parts planning directly in the order. This supports reservations or goods issues (e.g., via IW31/IW32).
Why Not the Others?
* Spare parts planning in service order template (A):Service order templates define structure, not BOM-linked planning; BOM usage 4 applies to execution objects (orders, task lists).
* Structuring of technical assets (B):BOMs describe components, not the hierarchical structure (handled by functional locations or equipment hierarchies).
Real-World Benefit:
A pump's BOM (usage 4) lists "Seal" and "Bearing." A task list or service order automatically plans these, reducing downtime by ensuring availability.
"BOMs with usage 4 enable spare parts planning in task lists and service orders, enhancing maintenance efficiency."

NEW QUESTION # 36
Which of the following is a prerequisite to install a piece of equipment in a functional location?

- A. Allow the equipment category to be installed in a functional location
- B. Allow the combination of equipment category and object type to be installed in a functional location
- C. Set the installation flag for a functional location category
- D. Set the installation flag for a piece of equipment

Answer: A

Explanation:
To install equipment in a functional location in SAP S/4HANA:
* Allow the equipment category to be installed in a functional location: The equipment category (e.g., M for machines) must be configured to permit installation (set in transaction OIEQ), ensuring compatibility with functional locations.
* Combination of equipment category and object type: Object types are for classification, not installation prerequisites.
* Installation flag for equipment/functional location: No such flags exist; installation is controlled by category settings.This is part of equipment management setup."The equipment category must allow installation in a functional location as a prerequisite." (SAP Help Portal, Equipment Installation).

NEW QUESTION # 37
What are steps included in the planning and execution of a recurring inspection? Note: There are 2 correct answers to this question.

- A. A service order is automatically generated when activating the maintenance plan for the inspection.
- B. When accepting a service order quotation, the system automatically creates a maintenance plan.
- C. A completion marks a service order and its corresponding planned date in the maintenance plan as finished.
- D. A service order is automatically generated by scheduling the maintenance plan for the inspection.

Answer: C,D

Explanation:
Arecurring inspectionin SAP S/4HANA Cloud Private Edition, Service uses a maintenance plan to schedule periodic checks. The correct steps areAandB. Let's explore this in detail.
Recurring Inspection Overview:
This process involves scheduling inspections via a maintenance plan, generating service orders, and completing them to update the plan.
* A completion marks a service order and its corresponding planned date in the maintenance plan as finished (A):When a service order (the call object) is completed (e.g., status "Technically Completed"), the system updates the maintenance plan, marking the corresponding planned date as finished. This shifts the scheduling to the next cycle (e.g., via transaction IP10).
* A service order is automatically generated by scheduling the maintenance plan for the inspection (B):Scheduling the maintenance plan (e.g., via IP10 or a background job) generates a service order based on the plan's cycle and call horizon. This order contains theinspection tasks.
Why Not the Others?
* C:Accepting a quotation creates a contract or order, not a maintenance plan, which is a separate planning object.
* D:Activating a maintenance plan sets it up but doesn't generate orders; scheduling does that.
Detailed Flow:
* Maintenance plan created with inspection cycle (e.g., every 6 months).
* Scheduling (IP10) generates a service order when the call date is reached.
* Order completed # Plan updated, next call scheduled.
"Recurring inspections involve scheduling a maintenance plan to automatically generate service orders, with completion updating the plan's planned dates."

NEW QUESTION # 38

......

The majority of people encounter the issue of finding extraordinary SAP C-TS470-2412 exam dumps that can help them prepare for the actual SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service exam. They strive to locate authentic and up-to-date SAP C-TS470-2412 Practice Questions for the SAP C-TS470-2412 exam, which is a tough ask.

Test C-TS470-2412 Duration: https://www.topexamcollection.com/C-TS470-2412-vce-collection.html

Using TopExamCollection Test C-TS470-2412 Duration can quickly help you get the certificate you want, SAP Reliable C-TS470-2412 Dumps Files We guarantee that your Questions & Answers will be delivered to you within 4 weeks, SAP Reliable C-TS470-2412 Dumps Files We believe you must be hard working to your own future, This knowledge will help you in SAP C-TS470-2412 exam success and career, You can have a try of using the C-TS470-2412 prep guide from our company before you purchase it.

Remember that a company is only as strong as its understanding C-TS470-2412 of its own market, Installing the On-Premises Systems, Using TopExamCollection can quickly help you get the certificate you want.

We guarantee that your Questions & Answers will be delivered to you within 4 weeks, We believe you must be hard working to your own future, This knowledge will help you in SAP C-TS470-2412 exam success and career.
