Fortinet NSE 6 - FortiSOAR 7.3 Administrator Sample Questions (Q41-Q46):

NEW QUESTION # 41

Which service on FortiSOAR is the playbook scheduler?

- A. colcrybeatd
- B. celeryd
- C. cyops-torccat
- D. uwsgi

Answer: A

Explanation:

In FortiSOAR, the service responsible for the playbook scheduling functionality is colcrybeatd. This service manages the timing and execution of scheduled playbooks, allowing for the automation of various tasks at specified intervals. It ensures that playbooks execute according to their configured schedules, which can include tasks such as data ingestion, threat detection, or incident response actions. Proper functioning of this service is essential for the reliable automation of time-dependent processes within FortiSOAR.

NEW QUESTION # 42

An administrator is issuing the following command on a node trying to join a FortiSOAR cluster as a standby:
csadm ha join-cluster --status active -role secondary --primary-node 10.0.1.160 The node fails to join the cluster. What is the issue?

- A. The primary node needs to be resolvable via FQDN.
- B. The status value should be passive.
- C. The role value should be worker.
- D. The IP address should be for secondary-node Instead of primary-node.

Answer: B

Explanation:

When joining a FortiSOAR cluster as a standby node, the correct status value should be passive. Using active would imply that the node is trying to join as an active node, which could cause conflicts in the cluster setup.

In FortiSOAR, standby nodes must be set as passive to ensure they are recognized correctly and to avoid conflicts with the primary node or other active nodes within the cluster. Therefore, setting the status to passive will resolve the issue and allow the node to join the cluster as intended.

NEW QUESTION # 43

Select two statements that are true about FortiSOAR themes.

(Choose two.)

- A. Selecting Revert Theme allows the user to revert the user profile theme.
- B. Non-administrator users can change the theme by editing their user profile.
- C. FortiSOAR theme can be configured to apply to all users on the system.
- D. There are three theme options available: Dark, Light, and Sky.

Answer: B,C

NEW QUESTION # 44

For which two modules on FortiSOAR can you create SLA templates? (Choose two.)

- A. Alerts
- B. Indicators
- C. Incidents
- D. Tasks

Answer: A,B

Explanation:

In FortiSOAR, SLA (Service Level Agreement) templates can be created for specific modules, including Alerts and Indicators. These templates are essential for tracking response and resolution times, ensuring compliance with defined service levels. By configuring SLAs on the Alerts and Indicators modules, organizations can monitor the time taken to address these items, which is critical in maintaining efficient incident response and management practices. The SLA templates can be customized according to specific business requirements and are applied to records within these modules to enforce timely actions.

NEW QUESTION # 45

What are two system-level logs that can be purged using application configuration? (Choose two.)

- A. Executed Playbook logs
- B. Audit logs
- C. Reporting logs
- D. Connector logs

Answer: A,B

Explanation:

In FortiSOAR, system-level logs that can be purged include both "Audit logs" and "Executed Playbook logs." These types of logs can be configured to be purged periodically to free up storage space and ensure that unnecessary logs do not impact system performance. The application configuration allows administrators to schedule automatic purges, which can be especially useful in high-activity environments where log data accumulates quickly. Purging these logs helps maintain a cleaner and more efficient system.
