NEW QUESTION # 15

What role does a Replication Factor of 2 or 3 play in ensuring data integrity and recovery?

- A. It reduces the need for offsite backup solutions.
- B. It accelerates data transfer to remote backup sites.

- C. It ensures that multiple copies of data are available for recovery.
- D. It limits the scope of hardware failures during recovery operations.

Answer: C

NEW QUESTION # 16

An administrator is creating a Linux VM and must decide which is the correct timezone to choose. Which timezone should the administrator select for this VM?

- A. Central
- B. Local
- C. Eastern
- D. UTC

Answer: D

Explanation:

The correct answer is B. UTC.

When creating Linux VMs in a Nutanix environment (or in any enterprise-grade production environment), it is best practice to use UTC(Coordinated Universal Time) as the system timezone. This ensures:

- * Consistency across distributed systems
- * Accurate log correlation
- * Avoidance of issues with daylight saving time (DST)
- * Simplified centralized monitoring and troubleshooting

Clarifications:

- * A (Eastern) and D (Central) are region-specific and may introduce time skew across systems.
- * C (Local) is ambiguous and depends on the underlying hardware or hypervisor setting, which can lead to inconsistent behavior.

Official Reference:

- * Linux Admin Best Practices
- * Nutanix Best Practices Guide - VM Provisioning Section
- * Excerpt: "For consistency across environments, it is recommended to configure all Linux virtual machines to use UTC timezone, particularly in clustered and distributed applications."
