## EMC Dell Data Science Foundations Sample Questions (Q130-Q135):

### NEW QUESTION # 130

Which of the following is an example of quasi-structured data?

- A. OLAP
- B. Customer record table
- C. Clickstream data
- D. OLTP

**Answer: C**

### NEW QUESTION # 131

Refer to the exhibit.

□ After analyzing a dataset, you report findings to your team:

1. Variables A and C are significantly and positively impacting the dependent variable.
2. Variable B is significantly and negatively impacting the dependent variable.
3. Variable D is not significantly impacting the dependent variable.

After seeing your findings, the majority of your team agreed that variable B should be positively impacting the dependent variable. What is a possible reason the coefficient for variable B was negative and not positive?

- A. Variable B needs a quadratic transformation due to its relationship to the dependent variable
- B. Variable B needs a logarithmic transformation due to its relationship to the dependent variable
- C. Variable B is interacting with another variable due to correlated inputs
- D. The information gain from variable B is already provided by another variable

**Answer: C**

### NEW QUESTION # 132

What action occurs during feature selection in the model building phase of the data analytics lifecycle?

- A. Identify the most useful input variables
- B. Overfit the model to improve prediction accuracy
- C. Select a superset of variables to shorten training times
- D. Create new combinations of attributes

**Answer: A**

Explanation:

Feature selection involves identifying the most useful input variables that contribute meaningfully to the model, improving accuracy and reducing complexity during the model building phase.

### NEW QUESTION # 133

Which Hadoop service responds to requests for compute and memory resources?

- A. Application Manager
- B. DataNode
- C. Application Master
- D. Scheduler

**Answer: D**

Explanation:

The Scheduler in Hadoop is responsible for allocating compute and memory resources across various applications running on the

cluster. It decides how resources are distributed based on policies and availability.

#### NEW QUESTION # 134

In ANOVA, what is the null hypothesis for k population means?

- A. At least two population means are equal
- B. At least two population means are not equal
- C. At most k-1 population means are equal
- D. All population means are equal to each other

**Answer: D**

Explanation:

In ANOVA (Analysis of Variance), the null hypothesis is that all population means are equal to each other.

The goal is to test whether there is evidence to reject this hypothesis, indicating that at least one population mean differs from the others.
