Exams4sures Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) self-evaluation tests serve as a call to action, guiding you on how to improve your performance before the Fortinet NSE7_SSE_AD-25 real exam. Exams4sures's Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) web-based and desktop practice dumps also provide candidates with a realistic NSE7_SSE_AD-25 Exam scenario, allowing them to experience the NSE7_SSE_AD-25 actual exam situation and prepare accordingly. Our NSE7_SSE_AD-25 practice questions offer an excellent opportunity to identify and practice the strategies that work best for you.

Fortinet NSE7_SSE_AD-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• SASE architecture and integration: This domain covers integrating FortiSASE into existing networks, identifying core SASE components, and evaluating their roles in advanced deployment scenarios.
Topic 2	<ul style="list-style-type: none">• SASE deployment and management: This section focuses on deploying and managing FortiSASE for branch and remote users, configuring advanced inspection features, and managing endpoint profiles and compliance rules.
Topic 3	<ul style="list-style-type: none">• Analytics: This section covers troubleshooting connectivity and endpoint issues, analyzing dashboards and logs, and reviewing reports related to user traffic and security events.
Topic 4	<ul style="list-style-type: none">• Secure Private Access (SPA): This domain includes designing SPA use cases, deploying SPA with SD-WAN, and implementing ZTNA with tagging rules and access proxy configurations.

Dumps NSE7_SSE_AD-25 Questions & New NSE7_SSE_AD-25 Learning Materials

Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator NSE7_SSE_AD-25 exam practice material is available in desktop practice exam software, web-based practice test, and PDF format. Choose the finest format of Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator NSE7_SSE_AD-25 exam questions so that you can prepare well for the Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator exam. Our NSE7_SSE_AD-25 PDF exam questions are an eBook that can be read on any device, even your smartphone.

Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q72-Q77):

NEW QUESTION # 72

To complete their day-to-day operations, remote users require access to a TCP-based application that is hosted on a private web server. Which FortiSASE deployment use case provides the most efficient and secure method for meeting the remote users' requirements?

- A. zero trust network access (ZTNA) private access
- B. next generation firewall (NGFW)
- C. inline-CASB
- D. SD-WAN private access

Answer: A

Explanation:

Zero Trust Network Access (ZTNA) private access provides the most efficient and secure method for remote users to access a TCP-based application hosted on a private web server. ZTNA ensures that only authenticated and authorized users can access specific applications based on predefined policies, enhancing security and access control.

* Zero Trust Network Access (ZTNA):

* ZTNA operates on the principle of "never trust, always verify," continuously verifying user identity and device security posture before granting access.

* It provides secure and granular access to specific applications, ensuring that remote users can securely access the TCP-based application hosted on the private web server.

* Secure and Efficient Access:

* ZTNA private access allows remote users to connect directly to the application without needing a full VPN tunnel, reducing latency and improving performance.

* It ensures that only authorized users can access the application, providing robust security controls.

References:

FortiOS 7.6 Administration Guide: Provides detailed information on ZTNA and its deployment use cases.

FortiSASE 23.2 Documentation: Explains how ZTNA can be used to provide secure access to private applications for remote users.

NEW QUESTION # 73

A FortiSASE customer has been enforcing always-on VPN for their remote-users running FortiClient.

What option can be enabled under the customer's Endpoint Profile to allow them access different resources located in the same L2 network?

- A. Endpoint Anti-Virus protection in the Endpoint Profile for VPN
- B. Endpoint Sandbox protection for VPN users
- C. Allow local LAN Access into user Endpoint Profile before they get connected to the VPN
- D. Network Lockdown for endpoints with VPN enabled

Answer: C

Explanation:

Enabling Allow local LAN access in the endpoint profile lets remote users access other resources on the same Layer 2 network without routing that traffic through the FortiSASE VPN, while still enforcing the always-on VPN for other traffic.

NEW QUESTION # 74

A customer has an existing network that needs access to a secure application on the cloud.

Which FortiSASE feature can the customer use to provide secure Software-as-a-Service (SaaS) access?

- A. SD-WAN
- B. Secure Web Gateway (SWG)
- **C. Inline-CASB**
- D. Zero Trust Network Access (ZTNA)

Answer: C

Explanation:

Inline CASB provides visibility and control over SaaS applications, enforcing security policies, monitoring user activity, and protecting sensitive data in cloud applications.

NEW QUESTION # 75

How does integrating endpoint detection and response (EDR) systems into SASE contribute to security posture?

- A. It enhances user interface designs
- **B. It provides real-time threat detection and response at endpoints**
- C. It isolates the network from the internet
- D. It serves as the primary firewall

Answer: B

Explanation:

Integrating EDR into SASE enhances security posture by delivering real-time threat detection and response directly at the endpoint level. This allows organizations to quickly identify, contain, and remediate threats before they spread across the network.

NEW QUESTION # 76

A customer configured the On/off-net detection rule to disable FortiSASE VPN auto-connect when users are inside the corporate network. The rule is set to Connects with a known public IP using the company's public IP address. However, when the users are on the corporate network, the FortiSASE VPN still auto-connects.

The customer has confirmed that traffic is going to the internet with the correct IP address.

Which configuration is causing the issue? (Choose one answer)

- A. Is connected to a known DNS server should be enabled and configured.
- **B. Exempt endpoint from FortiSASE auto-connect is disabled when it should be enabled.**
- C. The On-net rule set configuration is incorrect.
- D. Allow local LAN access when endpoint is on-net is disabled when it should be enabled.

Answer: B

Explanation:

The FortiSASE On/off-net detection feature is a two-part configuration designed to optimize bandwidth and user experience by determining when a device is in a trusted environment.

* Rule Set Definition: The first part involves defining what constitutes an "on-net" or "on-fabric" status.

In this scenario, the customer successfully configured a rule set named CERT-PUBLIC-IP using the Connects with a known public IP detection type. This tells FortiSASE that if the endpoint's public WAN IP matches the corporate gateway, it is considered to be on the corporate network.

* Profile Exemption Logic: Defining the rule set is not enough to stop the VPN connection. Within the Endpoint Profile (under the Connection tab > On/off-net Settings), there is a specific toggle labeled Exempt endpoint from FortiSASE auto-connect when endpoint is on-net (or in some versions, Bypass FortiSASE when endpoint is on-net).

* Exhibit Analysis: Looking at the provided exhibit (image_57097d.jpg), the "Exempt endpoint from FortiSASE auto-connect..." toggle is clearly disabled (switched to the left).

* Root Cause: Because this toggle is disabled, FortiClient identifies that it is "on-net" based on the IP rule, but it has no instruction to skip the VPN connection. Consequently, the "Automatically" initiate tunnel setting remains the dominant instruction, causing the VPN to connect regardless of the network location.

To resolve the issue, the administrator must enable the Exempt endpoint from FortiSASE auto-connect when endpoint is on-net

option in the SASECert01 profile.

NEW QUESTION # 77

.....

In order to let customers understand our Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator exam dumps better, our company will provide customers with a trail version. All customers have the opportunity to download our trail version. More importantly, the trail version is free for customers. The trail version will offer demo to customers, it means customers can study the demo of our NSE7_SSE_AD-25 exam torrent for free. If you use our NSE7_SSE_AD-25 test quiz, we believe you will know fully well that our product is of superior quality, other products can't be compared with it. If you are hesitating to buy our NSE7_SSE_AD-25 Test Quiz, if you are anxious about whether our product is suitable for you or not, we think you can download the trail version. We believe our Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator exam dumps will help you make progress and improve yourself.
