

Latest VMware 3V0-24.25 Dumps Questions, Reliable 3V0-24.25 Test Camp

As is known to us, getting the newest information is very important for all people to pass the exam and get the certification in the shortest time. In order to help all customers gain the newest information about the 3V0-24.25 exam, the experts and professors from our company designed the best Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service test guide. The experts will update the system every day. If there is new information about the exam, you will receive an email about the newest information about the 3V0-24.25 learning dumps. We can promise that you will never miss the important information about the exam.

VMware 3V0-24.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware Solution: Includes creating and managing Supervisor clusters, namespaces, zones, workloads, and add-on services. Also covers provisioning, scaling, updating VKS clusters, autoscalers, storage strategies, workload deployments, backup • restore, and editing YAML configurations.
Topic 2	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: This section covers the differentiation between VMs and containers, helping determine the appropriate compute model. It also includes understanding Kubernetes architecture, networking, storage, service mesh, Helm, and reference architectures for VKS deployments.
Topic 3	<ul style="list-style-type: none"> • Plan and Design the VMware Solution: Covers evaluating the impact of load balancer sizing, namespace network options, and vSphere namespace architecture. It includes planning processes for enabling Supervisor clusters and implementing service mesh.
Topic 4	<ul style="list-style-type: none"> • VMware Products and Solutions: Focuses on configuring vSphere Supervisor capabilities, networking, storage, identity, and access for Kubernetes clusters. It also covers managing Kubernetes releases, CNIs, NSX networking objects, TLS certificates, and securing VKS clusters.

Topic 5

- Troubleshoot and optimize the VMware Solution: Focuses on diagnosing and resolving provisioning, connectivity, namespace, VM class, storage, networking, container, registry, and CA errors. It also includes recovering failed upgrades and optimizing cluster performance using monitoring and scaling tools.

100% Pass Quiz Fantastic VMware - 3V0-24.25 - Latest Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Dumps Questions

For one thing, the most advanced operation system in our company which can assure you the fastest delivery speed on our 3V0-24.25 exam questions. For another thing, with the online app version of our 3V0-24.25 actual exam, you can just feel free to practice the questions in our 3V0-24.25 Training Materials on all kinds of electronic devices. In addition, under the help of our 3V0-24.25 exam questions, the pass rate among our customers has reached as high as 98% to 100%. We are look forward to become your learning partner in the near future.

VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Sample Questions (Q14-Q19):

NEW QUESTION # 14

A Cloud Administrator needs to prepare a VKS environment for a "Private Cloud" deployment where all Kubernetes nodes must pull their system images (e.g., kube-proxy, coredns, antrea) from a central Harbor Registry instead of the internet.

Review the configuration snippet for the TkgServiceConfiguration (the global TKG configuration object):

```
apiVersion: run.tanzu.vmware.com/v1alpha1
```

```
kind: TkgServiceConfiguration
```

```
metadata:
```

```
name: tkg-service-configuration
```

```
spec:
```

```
defaultCNI: antrea
```

```
...
```

```
trust:
```

```
additionalTrustedCAs:
```

```
- name: harbor-ca-cert
```

```
data: LS0tLS1... (Base64)
```

```
imageRepository:
```

```
host: harbor.corp.local
```

```
caCertificate: LS0tLS1... (Base64)
```

What is the effect of configuring the imageRepository field in this spec? (Select all that apply.)

- A. It overrides the default upstream VMware registry location for all newly created TKG clusters.
- B. It forces all user workloads (Pods) to use this registry by default.
- C. It automatically copies/replicates the images from VMware Public Registry to harbor.corp.local.
- D. It configures the TKG worker nodes to trust the CA certificate of the Harbor registry.
- E. It instructs the Supervisor to rewrite the image manifests for system components (like CoreDNS) to point to harbor.corp.local instead of projects.registry.vmware.com

Answer: A,D,E

NEW QUESTION # 15

A Cloud Administrator needs to resolve a "Condition: False" error on a Supervisor Cluster related to network connectivity. The Supervisor cannot reach the external image registry to pull system images.

Review the following log snippet from the Supervisor's WCP service:

```
E1121 10:05:01.442 controller.go:120] Failed to pull image 'projects.registry.vmware.com/tkg/tanzu- kubernetes-grid-service-v2.0.0':
```

```
rpc error: code = Unknown desc = Error response from daemon: Get
```

```
https://projects.registry.vmware.com/v2/: dial tcp 10.128.0.45:443: i/o timeout The administrator verifies that the firewall rules allow
```

traffic from the Supervisor Management Network IP range to the internet.

What configuration on the Supervisor is most likely missing or incorrect, preventing this connection?
(Select all that apply.)

- A. The Proxy Settings (HTTP/HTTPS Proxy) have not been configured or are incorrect on the Supervisor, preventing it from routing internet-bound traffic through the corporate gateway.
- B. The DNS Server settings on the Supervisor are incorrect, causing name resolution to fail.
- C. The Supervisor's Management Network Gateway is configured incorrectly.
- D. The Egress CIDR for the Namespaces is exhausted.
- E. The Image Registry Service has not been enabled on the Supervisor.

Answer: A,C

NEW QUESTION # 16

A customer is required to enhance the security for a set of VMware vSphere Kubernetes Service (VKS) clusters that host services interacting with sensitive customer data. The solution must encrypt the transport and communications between services. The VKS Admin recommends enabling Istio Service Mesh to satisfy the requirement. What type of encryption does Istio Service Mesh provide?

- A. IPsec with IKEv2
- B. SSH or TLS
- C. AES 256
- D. mTLS

Answer: D

Explanation:

Istio is available in VCF 9.0 as an optional package that can be installed for VKS clusters. The VCF 9.0 documentation explicitly lists "Istio" among the optional packages that "can be optionally installed" for the vSphere Kubernetes Service (VKS). In Kubernetes platforms, Istio is a service mesh that secures and manages service-to-service (east-west) traffic by establishing authenticated and encrypted connections between workloads. The encryption mechanism it provides for inter-service communication is mutual TLS (mTLS), which means both ends (client and server workloads) authenticate each other and negotiate encrypted transport for every service call-meeting the requirement to "encrypt the transport and communications between services." This is distinct from host-level mechanisms like IPsec/IKEv2 (network-layer) or "AES-256" (an algorithm, not the service-to-service transport model). Enabling Istio Service Mesh is therefore aligned to deliver encrypted, identity-aware service communications across the cluster at the application service layer.

NEW QUESTION # 17

A DevOps Engineer is evaluating the VM Service (Virtual Machine Service) included with vSphere with Tanzu. What is the primary architectural purpose of this service?

- A. To allow developers to provision and manage Virtual Machines using Kubernetes-native APIs (kubectl) alongside containerized workloads.
- B. To convert existing Virtual Machines into vSphere Pods automatically.
- C. To run containerized applications inside a specialized Virtual Machine without a Kubernetes control plane.
- D. To replace vCenter Server as the primary management interface for all vSphere Virtual Machines.

Answer: A

NEW QUESTION # 18

An administrator is tasked with making an existing vSphere Supervisor highly available by adding two additional vSphere Zones. How should the administrator perform this task?

- A. Select Configure, select vSphere Zones, and click Add New vSphere Zone.
- B. Create a new vSphere Zone and add the Supervisor to the new vSphere Zone.
- C. Create a new multi-zone deployment and assign an existing vSphere cluster to it.
- D. You cannot add an existing Supervisor to a new vSphere Zone.

Answer: D

Explanation:

In VMware Cloud Foundation 9.0 and vSphere Supervisor architectures, the decision to deploy a Single-Zone or a Multi-Zone Supervisor is made at the time of initial enablement. A Single-Zone Supervisor is tied to a specific vSphere Cluster. A Multi-Zone Supervisor requires a minimum of three vSphere Zones (each mapped to a cluster) to be defined before the Supervisor is deployed so that the Control Plane VMs can be distributed for high availability.

Currently, there is no supported "in-place" migration path to convert a deployed Single-Zone Supervisor into a Multi-Zone Supervisor by simply adding zones later. If an organization requires the high availability provided by a three-zone architecture, the administrator must decommission the existing Single-Zone Supervisor and then re-enable the Supervisor Service using the Multi-Zone configuration wizard. This design ensures that the underlying Kubernetes Control Plane components are correctly instantiated with the necessary quorum and anti-affinity rules that can only be established during the initial "Workload Management" setup phase.

NEW QUESTION # 19

.....

That is the reason VCETorrent has compiled a triple-formatted 3V0-24.25 exam study material that fulfills almost all of your preparation needs. The VMware 3V0-24.25 Practice Test is compiled under the supervision of 90,000 VMware professionals that assure the passing of the Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service (3V0-24.25) exam on your first attempt. The Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service (3V0-24.25) practice exam consists of a Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service (3V0-24.25) PDF dumps format, Desktop-based 3V0-24.25 practice test software and a Web-based Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service (3V0-24.25) practice exam.
