

# Reliable UiPath-ADPv1 Exam Preparation | UiPath-ADPv1 PDF Question

## **4 PARAMEDIC AIRWAY FISDAP REVIEW** **PART 1 TEST BANK 2026 QUESTIONS** **GRADED A+**

>> What relaxes bronchial smooth muscles?

**Answer: beta agonists**

>> A 47-year old male complains of chest discomfort and difficulty breathing. He has had a fever, chills, and a productive cough for 3 days. Crackles are present upon auscultation. What is the most likely cause?

**Answer: Bacterial Pneumonia**

>> A 45 year old male was assaulted and you note a small, localized area on the chest that is edematous. You hear crackling when the skin palpated. What should you expect?

**Answer: Subcutaneous Emphysema**

>> While ventilating an intubated patient, you notice a shark fin waveform on capnography. Ventilations become increasingly difficult. What should you do?

**Answer: Administer albuterol**

>> A 28 year old female is complaining of gradual-onset dyspnea after being released from the hospital. She was hospitalized for 1 day following thoracic trauma and a lung contusion. Lung sounds present with crackles in both bases. Vital signs are BP 130/80, P 110, R 32 shallow, SpO2:88%. You should

**Answer: apply oxygen via non-rebreather and transport emergently**

>> What is the volume of air that a patient inhales during each breath referred to as?

In order to be able to better grasp the proposition thesis direction, the UiPath (ADPv1) Automation Developer Professional study question focus on proposition which one recent theory and published, in all kinds of academic report even if update to find effective thesis points, according to the proposition of preferences and habits, ponder proposition style of topic selection, to update our UiPath-ADPv1 Exam Question, to facilitate users of online learning, better fit time development hot spot.

## UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.</li></ul>

Topic 4	<ul style="list-style-type: none"><li>• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.</li></ul>

## Three User-Friendly and Easy-to-Install ActualCollection UiPath-ADPv1 Exam Questions

The price for UiPath-ADPv1 learning materials is quite reasonable, no matter you are a student or you are an employee in the company, and you can afford the expense. Besides, UiPath-ADPv1 exam braindumps of us is famous for the high-quality and accuracy. You can pass the exam just one time if you choose us. UiPath-ADPv1 Learning Materials contain both questions and answers, and you can know the answers right now after you finish practicing. We offer you free update for one year and the update version for UiPath-ADPv1 exam dumps will be sent to your email automatically.

### UiPath (ADPv1) Automation Developer Professional Sample Questions (Q162-Q167):

#### NEW QUESTION # 162

A developer configured the properties for a Click activity on an element inside a web page as shown in the following exhibit.

□ An animation on the web page never completely loads but the element indicated in the Click activity does load within the specified timeout duration. What occurs when this Click activity executes?

- A. Continues to the next activity after 30 seconds without clicking on the element.
- B. Timeout error occurs without clicking on the element.
- C. Element is clicked once the element is fully loaded.
- D. Waits 10 seconds before clicking on the element.

**Answer: C**

Explanation:

Click activity has the following properties:

\*ClickType: Single

\*MouseButton: Left

\*Target.Timeout: 30000 ms (30 seconds)

\*Target.WaitForReady: Interactive

The Target.Timeout property specifies the amount of time (in milliseconds) to wait for the activity to run before the SelectorNotFoundException error is thrown1. The default value is 30000 milliseconds (30 seconds)2.

The Target.WaitForReady property determines how long the activity should wait for the target UI element to be ready before performing the action1. The following options are available:

\*None: Does not wait for anything except the target UI element to exist before executing the action1.

\*Interactive: Waits until only a part of the app is loaded1.

\*Complete: Waits for the entire app to be loaded1.

The default value is Interactive2, which means that the activity will wait until the UI element is visible and can be interacted with3. Therefore, based on these properties, the Click activity will wait for the element indicated by the selector to be loaded and clickable within 30 seconds. If the element is loaded before the timeout, the activity will click it and continue to the next activity. If the element is not loaded within the timeout, the activity will throw an error and stop the execution. The animation on the web page does not affect the Click activity, as long as the target element is loaded and visible. Hence, the correct answer is A. Element is clicked once the element is fully loaded.

#### NEW QUESTION # 163

While working in an RPA testing project, you encountered the following activity in one of the workflows included in the project.

□ What action can you perform in your mocked file to replace the functionality of the MessageBox with a LogMessage during mock testing?

- A. Remove mock activity.

- B. Synchronize mock.
- C. Surround activity with mock.
- D. Create mock workflow.

**Answer: C**

Explanation:

To replace the functionality of the MessageBox with a LogMessage during mock testing, the developer can perform the action of Surround activity with mock. This action inserts a mock activity around the selected activity, which allows the developer to change the behavior of the activity for testing purposes. For example, the developer can right-click on the MessageBox activity and select Surround activity with mock from the dropdown menu. This will create a mock activity that contains the MessageBox activity. The developer can then edit the mock activity and replace the MessageBox activity with a LogMessage activity, which will write the message to the output panel instead of displaying it in a dialog box. This way, the developer can test the functionality of the workflow without having to interact with the MessageBox dialog box. References: [Mock Testing], [Surround Activity with Mock]

#### NEW QUESTION # 164

A developer examines a workflow in which filenames are stored within a collection. The collection is initialized with a single filename. When adding a new filename to the collection, which collection variable type will cause an error?

- A. System.Array
- B. System.Collections.Generic.Dictionary
- C. System.Data.DataTable
- D. System.Collections.Generic.List

**Answer: A**

#### NEW QUESTION # 165

In the context of a UiPath State Machine, what is the primary purpose of the Exit action in a state?

- A. To revoke any entry actions performed when entering the current state.
- B. To execute the final actions of the current state before transitioning to the next stage.
- C. To define the conditions upon which a state transition should occur.
- D. To manually stop the state machine's execution.

**Answer: B**

Explanation:

The Exit action in a state is an activity or a sequence of activities that are executed when the state is exited, before the transition to the next state occurs<sup>1</sup>. The purpose of the Exit action is to perform any final actions of the current state, such as closing applications, releasing resources, logging information, etc. The Exit action is executed even if the state transitions back to the same state<sup>2</sup>.

Option A is incorrect, because the Exit action does not stop the state machine's execution, but rather prepares the state for the next transition. Option C is incorrect, because the Exit action does not revoke any entry actions, but rather complements them with any necessary exit actions. Option D is incorrect, because the Exit action does not define the conditions for the state transition, but rather executes after the conditions are evaluated.

#### NEW QUESTION # 166

How would you define a linear process in UiPath?

- A. The steps of the process are performed multiple times, but each time different data items are used.
- B. The steps of the process refer to the execution of steps in a sequential manner, where each subsequent step depends on the successful completion of the previous step.
- C. The steps of the process repeat multiple times over different data items. However, the automation design is such that each repeatable part processes independently.
- D. The process steps are performed only once. If the need is to process additional data, then the automation must execute again.

**Answer: D**

### Explanation:

A linear process in UiPath is a type of process that is executed only once and does not involve any looping or branching logic. It is suitable for simple scenarios where the input data is fixed and the output is predictable. A linear process can be designed using a Sequence or a Flowchart diagram, but it does not use any Flow Decision, Switch, While, Do While, or For Each activity. If the process needs to process additional data, then the automation must be executed again with the new data as input.
