Free PDF 2026 MikroTik MTCNA: Newest Valid Test MikroTik Certified Network Associate Exam Experience

If you are applying for the MTCNA certification exam, it is great to show your dedication to it. You cannot take it for granted

because the MikroTik Certified Network Associate Exam (MTCNA) certification test is tough and you have to pay a good sum for appearing in it. You will lose money and time by studying with MTCNA Exam Preparation material that is not updated. So, to avoid your loss and failure in the MTCNA exam, you must prepare with actual MikroTik MTCNA questions from Lead2PassExam.

MikroTik Certified Network Associate Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54

The basic unit of a physical network (OSI Layer 1) is the:

- A. Frame
- B. Byte
- C. Header
- **D. Bit**

Answer: D

NEW QUESTION # 55

In which situations Netinstall can not be used to install RouterOS on a RouterBOARD?

- A. The router does not have an operating system
- B. The password of the router is not known
- **C. The router is connected only to a wireless network**
- D. The router is connected only to a secondary Ethernet port

Answer: C

Explanation:

Netinstall is a MikroTik utility used to reinstall or upgrade RouterOS. It requires a direct Ethernet connection to the router's first Ethernet port and works via PXE (boot over Ethernet). It cannot function over wireless.

Let's review the options:

- * A. The router is connected only to a secondary Ethernet port ##Netinstall works if booted over that port
- * B. The router does not have an operating system ##This is the purpose of Netinstall
- * **C. The router is connected only to a wireless network ##Correct: Netinstall requires a wired Ethernet connection**
- * D. The password of the router is not known ##Netinstall bypasses current OS; password irrelevant MTCNA Course Manual - RouterBOARD Recovery and Netinstall:

"Netinstall must be done over a wired Ethernet connection. Wireless booting is not supported." Rene Meneses Guide - System Recovery:

"Netinstall needs Layer 2 communication via Ethernet. It cannot operate over Wi-Fi." Terry Combs Notes - Netinstall Limitations:

"Netinstall does not support Wi-Fi. Must connect via Ethernet to first interface, preferably."

NEW QUESTION # 56

What is the meaning of letter "R" on an active session in the menu PPP Active Connections?

- **A. Radius**
- B. Remote
- C. Running

Answer: A

NEW QUESTION # 57

NAT rule is going to catch SMTP traffic and send it to a specific mail server.

What is the correct action for a NAT rule?

- **A. dst-nat**
- B. redirect
- C. tarpit
- D. passthrough

Answer: A

NEW QUESTION # 58

If a packet comes to a router and starts a new, previously unseen connection, which connection state would be applied to it?

- A. invalid
- **B. new**
- C. established
- D. no connection state would be applied to such packet
- E. unknown

Answer: B

Explanation:

MikroTik uses connection tracking to assign states to packets that pass through the router's firewall. When a packet initiates a connection that is not previously tracked, it is marked as new.

Connection states:

- * new: First packet of a new connection
- * established: Part of an existing tracked connection
- * related: New connection related to an existing one (e.g., FTP data channel)
- * invalid: Unrecognized or malformed connection
- * unknown: Used in very specific or rare circumstances (not common in IP-based networks) Therefore:
 - * A.#Incorrect - All packets entering the firewall are tracked
 - * B.#Correct - This is a new connection
 - * C.#Incorrect - "unknown" is not used for typical traffic
 - * D.#Incorrect - Not invalid unless malformed or contextless
 - * E.#Incorrect - This is not an existing connection

Extract from Official MTCNA Course Material - Firewall Connection States:

"A packet that begins a new connection is marked as 'new'. Connection tracking then continues monitoring that session." Extract from Rene Meneses MTCNA Study Guide - Connection Tracking:

"New connections receive the 'new' state. Firewall rules often start by permitting or blocking 'new' and 'established' states."

Extract from MikroTik Wiki - Firewall and Connection States:

"State=new is assigned when no existing connection entry matches the incoming packet."

NEW QUESTION # 59

.....

In case there are any changes happened to the MTCNA exam, the experts keep close eyes on trends of it and compile new updates constantly so that our MTCNA exam questions always contain the latest information. It means we will provide the new updates of our MTCNA Study Materials freely for you later since you can enjoy free updates for one year after purchase.
