FCP_FAZ_AN-7.4 Clear Exam & Valid FCP_FAZ_AN-7.4 Test Syllabus

Are you worried about insufficient time to prepare the exam? Do you have a scientific learning plan? Maybe you have set a series of to-do list, but it's hard to put into practice for there are always unexpected changes during the FCP_FAZ_AN-7.4 exam. Here we recommend our FCP_FAZ_AN-7.4 test prep to you. With innovative science and technology, our study materials have grown into a powerful and favorable product that brings great benefits to all customers. We are committed to designing a kind of scientific study material to balance your business and study schedule. With our FCP_FAZ_AN-7.4 Exam Guide, all your learning process includes 20-30 hours.

Fortinet FCP - FortiAnalyzer 7.4 Analyst Sample Questions (Q45-Q50):

NEW QUESTION # 45

Refer to the exhibit.

```

Total Quota Summary:
  Total Quota   Allocated   Available   Allocate%
    63.7GB      12.7GB      51.0GB      19.9%

System Storage Summary:
  Total   Used   Available   Use%
  78.7GB  2.9GB   75.9GB     3.6%

Reserved space: 15.0GB (19.0% of total space).

```

Why is the total quota less than the total system storage?

- A. The oftpd process has not archived the logs yet
- B. 3.6% of the system storage is already being used
- C. Some space is reserved for system use, such as storage of compression files, upload files and temporary report files
- D. The logfiled process is just estimating the total quota

Answer: C

NEW QUESTION # 46

Refer to the exhibit.

Event	Event Status	Event Type	Count	Severity
151.101.54.62 (1) Insecure SSL Connection blocked from 10.0.3.20	Mitigated	SSL	1	Low

Which statement is correct regarding the event displayed?

- A. The security risk was blocked or dropped.
- B. The security event risk is considered open.
- C. An incident was created from this event.
- D. The risk source is isolated.

Answer: A

NEW QUESTION # 47

You created a playbook on FortiAnalyzer that uses a FortiOS connector. When configuring the FortiGate side, which type of trigger must be used so that the actions in an automation stitch are available in the FortiOS connector?

- A. FortiOS Event Log
- B. Fabric Connector event
- C. FortiAnalyzer Event Handler
- **D. Incoming webhook**

Answer: D

NEW QUESTION # 48

What types of logs will FortiAnalyzer store?

- A. Traffic/Event, Data Leak Prevention (DLP) archive, Quarantine, and IPS (Intrusion Protection System) Packets.
- **B. Traffic/Event/Security, Data Leak Prevention (DLP) archive, Quarantine, and IPS (Intrusion Protection System) Packets.**
- C. Data Leak Prevention (DLP) archive, Quarantine, and IPS (Intrusion Protection System) Packets.
- D. Traffic/Event/Security, Data Leak Prevention (DLP) archive, Quarantine.

Answer: B

NEW QUESTION # 49

When managing incidents on FortiAnalyzer, what must an analyst be aware of?

- A. Incidents must be acknowledged before they can be analyzed.
- B. Severity incidents rated with the level High have an initial service-level agreement (SLA) response time of 1 hour.
- C. The status of the incident is always linked to the status of the attach event.
- **D. You can manually attach generated reports to incidents.**

Answer: D

Explanation:

In FortiAnalyzer's incident management system, analysts have the option to manually manage incidents, which includes attaching relevant reports to an incident for further investigation and documentation. This feature allows analysts to consolidate information, such as detailed reports on suspicious activity, into an incident record, providing a comprehensive view for incident response.

Let's review the other options to clarify why they are incorrect:

* Option A: You can manually attach generated reports to incidents

* This is correct. FortiAnalyzer allows analysts to manually attach reports to incidents, which is beneficial for providing additional context, evidence, or analysis related to the incident. This functionality is part of the incident management process and helps streamline information for tracking and resolution.

* Option B: The status of the incident is always linked to the status of the attached event

* This is incorrect. The status of an incident on FortiAnalyzer is managed independently of the status of any attached events. An incident can contain multiple events, each with different statuses, but the incident itself is tracked separately.

* Option C: Severity incidents rated with the level High have an initial service-level agreement (SLA) response time of 1 hour

* This is incorrect. While incidents have severity levels, specific SLA response times are typically set according to the organization's incident response policy, and FortiAnalyzer does not impose a default SLA response time of 1 hour for high-severity incidents.

* Option D: Incidents must be acknowledged before they can be analyzed

* This is incorrect. Incidents on FortiAnalyzer can be analyzed even if they are not yet acknowledged. Acknowledging an incident is often part of the workflow to mark it as being actively addressed, but it is not a prerequisite for analysis.

References: According to FortiAnalyzer documentation, analysts can attach reports to incidents manually, making option A correct. This feature enables better tracking and documentation within the incident management system on FortiAnalyzer.

NEW QUESTION # 50

.....

TrainingDumps alerts you that the syllabus of the FCP - FortiAnalyzer 7.4 Analyst (FCP_FAZ_AN-7.4) certification exam changes from time to time. Therefore, keep checking the fresh updates released by the Fortinet. It will save you from the unnecessary mental hassle of wasting your valuable money and time.
