

Best Preparation Material For The F5 F5CAB1 Exam Dumps from ActualPDF

2026 Latest ActualPDF F5CAB1 PDF Dumps and F5CAB1 Exam Engine Free Share: https://drive.google.com/open?id=1oOQJMw_GAnjQgufbnq_P-ArQ5ffs0K-D

Before clients purchase our BIG-IP Administration Install, Initial Configuration, and Upgrade test torrent they can download and try out our product freely to see if it is worthy to buy our product. You can visit the pages of our product on the website which provides the demo of our F5CAB1 study torrent and you can see parts of the titles and the form of our software. On the pages of our F5CAB1 study tool, you can see the version of the product, the updated time, the quantity of the questions and answers, the characteristics and merits of the product, the price of our product, the discounts to the client, the details and the guarantee of our F5CAB1 study torrent, the methods to contact us, the evaluations of the client on our product, the related exams and other information about our BIG-IP Administration Install, Initial Configuration, and Upgrade test torrent.

F5 F5CAB1 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • BIG IP Administration Install Initial Configuration and Upgrade: This section of the exam measures skills of System Administrators and covers the lifecycle tasks for deploying and maintaining a BIG IP system. It includes installing the platform, performing initial setup, applying licenses, configuring basic networking, and planning and executing software upgrades and hotfixes.
Topic 2	<ul style="list-style-type: none"> • BIG IP Administration Control Plane Administration: This section of the exam measures skills of System Administrators and covers managing the control plane where BIG IP is configured and administered. It includes working with user accounts, roles, device settings, configuration management, and using the graphical interface and command line for daily administrative tasks.
Topic 3	<ul style="list-style-type: none"> • BIG IP Administration Support and Troubleshooting: This section of the exam measures skills of Network Administrators and covers identifying and resolving common issues that affect BIG IP operation. It focuses on using logs, statistics, diagnostic tools, and basic troubleshooting methods to restore normal traffic flow and maintain stable application delivery.
Topic 4	<ul style="list-style-type: none"> • BIG IP Administration Data Plane Concepts: This section of the exam measures skills of Network Administrators and covers how BIG IP handles application traffic on the data plane. It includes understanding flow of traffic, key data path components, basic concepts of load balancing, and how security and performance features affect user traffic.
Topic 5	<ul style="list-style-type: none"> • BIG IP Administration Data Plane Configuration: This section of the exam measures skills of System Administrators and covers configuring BIG IP objects that control data plane behavior. It focuses on setting up virtual servers, pools, nodes, monitors, and profiles so that applications are delivered reliably and efficiently according to design requirements.

Reliable F5CAB1 Braindumps Pdf | Training F5CAB1 Kit

ActualPDF's F5CAB1 exam certification training materials are not only with high accuracy and wide coverage, but also with a reasonable price. After you buy our F5CAB1 certification exam training materials, we also provide one year free renewable service for you. We promise, when you buy the F5CAB1 Exam Certification training materials, if there are any quality problems or you fail F5CAB1 certification exam, we will give a full refund immediately.

F5 BIG-IP Administration Install, Initial Configuration, and Upgrade Sample Questions (Q48-Q53):

NEW QUESTION # 48

Which of the following should you do to enable SSL offloading on a BIG-IP system?

- A. Set up a VLAN for SSL offloading
- B. Configure the SSL profile on the backend servers
- C. Enable SSL through the System > Security settings
- **D. Configure an SSL profile and associate it with the virtual server**

Answer: D

Explanation:

To enable SSL offloading, you need to configure an SSL profile and link it to a virtual server to handle SSL termination.

NEW QUESTION # 49

What is the primary interface used to configure and manage F5 BIG-IP?

- A. SNMP interface
- B. Command-Line Interface (CLI)
- **C. Configuration utility (GUI)**

- D. Browser-based web console

Answer: C

Explanation:

The Configuration utility is the primary interface used for configuring the BIG-IP system, accessible via a web browser.

NEW QUESTION # 50

The BIG-IP Administrator wants to manage the newly built F5 system through an in-band Self-IP.

The administrator has configured a VLAN and Self-IP and can ping the IP from their workstation, but cannot access the system via SSH or HTTPS.

What port lockdown settings should the BIG-IP Administrator use to allow management access on the Self-IP? (Choose two.)

- A. The Self-IP port lockdown behavior could be adjusted to Allow Mgmt
- B. The Self-IP port lockdown behavior could be adjusted to Allow All
- C. The Self-IP port lockdown behavior could be adjusted to Allow Default
- D. The Self-IP port lockdown behavior could be adjusted to Allow Management

Answer: A,D

Explanation:

Self-IPs include a security feature called Port Lockdown, which restricts which services respond on that Self-IP.

By default, Self-IPs block management access (SSH and HTTPS/TMUI), meaning an administrator cannot manage the device through in-band Self-IPs unless explicitly allowed.

Allow Mgmt / Allow Management

These settings enable only the management services required for administrative access, specifically:

SSH (22)

HTTPS/TMUI (443)

These options allow secure administration without opening unnecessary ports.

Why these are correct:

They provide only the essential access for management.

They follow F5 security best practices when using in-band admin access.

They do not expose all services, reducing the attack surface.

NEW QUESTION # 51

The BIG-IP Administrator uses Secure Copy Protocol (SCP) to upload a TMOS image to the /shared/images/ directory in preparation for an upgrade.

After the upload is complete, what will the system do before the image appears in the GUI under: System » Software Management » Image List?

- A. The system performs a reboot into the new partition
- B. The system verifies the internal checksum
- C. The system copies the image to /var/local/images/

Answer: B

Explanation:

When a TMOS ISO file is transferred to /shared/images/, the BIG-IP automatically performs a validation step:

Checksum Verification

Before the image becomes visible in the GUI, the system verifies the internal checksum embedded inside the ISO.

This ensures:

The file was fully transferred

The image is not corrupted

It matches the official F5 release signature

Only after passing this verification does the GUI display the ISO under "Available Images."

NEW QUESTION # 52

The BIG-IP Administrator needs to update access to the Configuration Utility to include the 172.28.31.0/24 and

172.28.65.0/24networks.

From the TMOS Shell (tmsh), which command should the BIG-IP Administrator use to complete this task?

- A. modify /sys httpd allow add { 172.28.31.0 172.28.65.0 }
- **B. modify /sys httpd allow add { 172.28.31.0/255.255.255.0 172.28.65.0/255.255.255.0 }**
- C. modify /sys httpd permit add { 172.28.31.0/255.255.255.0 172.28.65.0/255.255.255.0 }

Answer: B

Explanation:

Access to the BIG-IP Configuration Utility (TMUI) is controlled through the /sys httpd allowlist.

This list defines which IP addresses or subnets are allowed to connect to the management web interface.

To allow two new subnets-172.28.31.0/24and172.28.65.0/24-the administrator mustaddboth subnets to the existing list without removing current entries.

In tmsh, subnet entries must be specified innetwork/netmask format, for example:

172.28.31.0/255.255.255.0

The correct tmsh command to append these networks is:

modify /sys httpd allow add { 172.28.31.0/255.255.255.0 172.28.65.0/255.255.255.0 }

Why the other options are incorrect:

Option B:

* IPs are listed without masks, which is invalid for subnet-based access control.

* The system requiresnetwork/netmaskformat.

Option C:

* The command uses permit instead of allow, which is not a valid attribute of /sys httpd.

* The correct keyword must beallow.

Thus, onlyOption Acorrectly adds both permitted subnets in the proper tmsh format.

NEW QUESTION # 53

.....

The BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) certification is a valuable credential that every F5 professional should earn it. The F5 F5CAB1 certification exam offers a great opportunity for beginners and experienced professionals to demonstrate their expertise. With the BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) certification exam everyone can upgrade their skills and knowledge. There are other several benefits that the F5CAB1 Exam holders can achieve after the success of the BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) certification exam. However, you should keep in mind to pass the F5 F5CAB1 certification exam is not an easy task. It is a challenging job.
