Note: There are 3 correct answers to this question.

- A. Survey
- B. Builder Assistant
- C. Activate from the Menu
- D. Permalink
- E. Auto-play

Answer: C,D,E

NEW QUESTION # 60

You are building a WalkMe solution to help your users self-serve and prevent common support tickets from being opened repeatedly. You want to add guidance for the top three support tickets to a page on your website and make it stand out for the end user.

What is the best solution to allow for quick and easy access?

- A. Create a Survey to ask end users about their feedback.
- B. Add it to your list of WalkMe content in the Menu.
- C. Create a large ShoutOut to appear in the middle of the page each time the user visits the page.
- D. Create a Mini Menu of content from the top three support tickets and place it next to the support ticket form.

Answer: D

NEW QUESTION # 61

Your IT team needs all employees to complete a critical computer update by the end of the day to prevent cyber-attacks. What is the best strategy to implement for this use case?

- A. Have a ShoutOut appear in the middle of the screen with only a call to action button to complete the update.
- B. Add a Launcher to the top of the page that says 'Click here' and opens a Knowledge Base article.
- C. Place a ShoutOut at the bottom of the screen and let the end user click on the call to action when they want.
- D. Have a ShoutOut appear in the middle of the screen and add a 'Remind me tomorrow' button.

Answer: A

Explanation:

For urgent and critical tasks, such as a mandatory computer update to prevent cyber-attacks, WalkMe ShoutOuts are effective for grabbing user attention and driving immediate action. A ShoutOut positioned in the middle of the screen with a single call to action (CTA) button to complete the update ensures high visibility and encourages prompt compliance. Including only one CTA avoids distractions and aligns with the urgency of the task, as users are guided directly to the update process without options to delay or seek additional information.

The other options are less effective:

* Option B (ShoutOut at the bottom) is less noticeable and allows users to delay action, which is risky for a critical update.

* Option C (Launcher with a Knowledge Base article) provides information but doesn't directly facilitate the update process.

* Option D (ShoutOut with a 'Remind me tomorrow' button) undermines the urgency by allowing users to postpone the update.

Extract from Official WalkMe Documentation:

Per the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 2.9:

ShoutOuts):

"ShoutOuts are ideal for urgent announcements requiring immediate user action. Positioning a ShoutOut in the center of the screen with a single, clear call to action maximizes engagement and drives compliance with critical tasks." The course Advancing Your Skills

in Building WalkMe Solutions advises:

"For time-sensitive and mandatory actions, such as security updates, use a centrally placed ShoutOut with a single CTA to ensure users prioritize the task. Avoid options that allow postponement to maintain urgency." Option A is the best strategy for this critical use case.

NEW QUESTION # 62

Which of the following is the best use case for using Behavior Based Segmentation?

- A. Display different SmartTips for users located in the United States and Italy.
- B. Make sure a Launcher only displays for Finance Team members.
- C. Play a ShoutOut only to users who have already used a specific feature.
- D. Show a time-sensitive ShoutOut and Survey to all users.

Answer: C

NEW QUESTION # 63

Your product team has informed you that there is a UI element on the website that has no purpose, is causing user confusion, and they need it removed. They also mentioned that they don't have enough development resources to remove it for at least a few weeks. What WalkMe solution can you build to help resolve this issue?

- A. Build a Resource to a support article on the UI element.
- B. Build a Mini Menu and place it next to the button.
- C. Build a mandatory field Launcher and place it on top of the UI element.
- D. Build a Launcher that will cover up the UI element and make it invisible.

Answer: D

Explanation:

WalkMe Launchers are on-screen elements that can be configured to trigger actions or content, such as Smart Walk-Thrus, Resources, or Shuttles. A key feature of Launchers is their ability to be customized for visibility and positioning, including the option to make them "invisible" by adjusting transparency settings. This makes them ideal for temporarily covering a problematic UI element without requiring code changes to the underlying website. By placing an invisible Launcher over the unwanted UI element, the Builder can block user interaction with it, effectively "hiding" it until developers can remove it.

The other options are less effective for this use case:

* A mandatory field Launcher is not a standard WalkMe feature; Launchers are not tied to form validation or mandatory fields.

* A Resource to a support article provides information but doesn't prevent users from interacting with the confusing UI element.

* A Mini Menu is a navigational tool for accessing content and cannot cover or hide a UI element.

Extract from Official WalkMe Documentation:

According to the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 2.3: Launchers):

"Launchers can be customized to be fully transparent using the ghost icon in the WalkMe Editor, allowing them to overlay and block interaction with specific UI elements without being visible to the end user. This is useful for temporarily disabling problematic elements." The course Advancing Your Skills in Building WalkMe Solutions notes:

"In scenarios where a UI element causes confusion and cannot be removed immediately, an invisible Launcher can be placed over the element to prevent user interaction, serving as a temporary workaround." Option D is the correct solution, as it directly addresses the need to make the UI element inaccessible without requiring development resources.
