有用的Terraform-Associate-003考試指南和資格考試中的主要供應商 & 真實的HashiCorp HashiCorp Certified: Terraform Associate (003) (HCTA0-003)

在這個競爭激烈的IT行業中，擁有一些認證證書是可以幫助你步步高升的。很多公司升職加薪的依據就是你擁有的認證證書的含金量。HashiCorp Terraform-Associate-003認證考試就是個含金量很高的考試。HashiCorp Terraform-Associate-003 認證證書能滿足很多正在IT行業拼搏的人的需求。Testpdf可以為你提供HashiCorp Terraform-Associate-003認證考試的針對性訓練。你可以先在網上免費下載Testpdf為你提供的關於HashiCorp Terraform-Associate-003 認證考試的培訓工具的試用版和部分練習題及答案作為嘗試。

最新的 Terraform Associate Terraform-Associate-003 免費考試真題 (Q152-Q157):

問題 #152

One remote backend configuration always maps to a single remote workspace.

- A. True
- B. False

答案: A

解題說明:

The remote backend can work with either a single remote Terraform Cloud workspace, or with multiple similarly-named remote workspaces (like `networking-dev` and `networking-prod`). The `workspaces` block of the backend configuration determines which mode it uses. To use a single remote Terraform Cloud workspace, set `workspaces.name` to the remote workspace's full name (like `networking-prod`). To use multiple remote workspaces, set `workspaces.prefix` to a prefix used in all of the desired remote workspace names. For example, set `prefix = "networking-"` to use Terraform cloud workspaces with names like `networking-dev` and `networking-prod`. This is helpful when mapping multiple Terraform CLI workspaces used in a single Terraform configuration to multiple Terraform Cloud workspaces³. However, one remote backend configuration always maps to a single remote workspace, either by name or by prefix. You cannot use both name and prefix in the same backend configuration, or omit both. Doing so will result in a configuration error³. References = [Backend Type: remote]³

問題 #153

Which of the following is not a key principle of infrastructure as code?

- A. Idempotence
- B. Golden images
- C. Self-describing infrastructure
- D. Versioned infrastructure

答案: B

解題說明:

The key principle of infrastructure as code that is not listed among the options is golden images. Golden images are pre-configured, ready-to-use virtual machine images that contain a specific set of software and configuration. They are often used to create multiple identical instances of the same environment, such as for testing or production. However, golden images are not a principle of infrastructure as code, but rather a technique that can be used with or without infrastructure as code. The other options are all key principles of infrastructure as code, as explained below:

* Self-describing infrastructure: This means that the infrastructure is defined in code that describes its desired state, rather than in scripts that describe the steps to create it. This makes the infrastructure easier to understand, maintain, and reproduce.

* Idempotence: This means that applying the same infrastructure code multiple times will always result in the same state, regardless of the initial state. This makes the infrastructure consistent and predictable, and avoids errors or conflicts caused by repeated actions.

* Versioned infrastructure: This means that the infrastructure code is stored in a version control system, such as Git, that tracks the changes and history of the code. This makes the infrastructure code reusable, auditable, and collaborative, and enables practices such as branching, merging, and rollback. References

問題 #154

Which Terraform collection type should you use to store key/value pairs?

- A. Map
- B. Set
- C. list
- D. Tuple

答案: A

解題說明:

The Terraform collection type that should be used to store key/value pairs is `map`. A `map` is a collection of values that are accessed by arbitrary labels, called keys. The keys and values can be of any type, but the keys must be unique within a `map`. For example, `var = { key1 = "value1", key2 = "value2" }` is a `map` with two key/value pairs. `Maps` are useful for grouping related values together, such as configuration options or metadata. References = [Collection Types], [Map Type Constraints]

問題 #155

Which of the following does terraform apply change after you approve the execution plan? (Choose two.)

- A. The execution plan
- B. Terraform code
- C. The .terraform directory
- **D. Cloud infrastructure Most Voted**
- **E. State file**

答案: D,E

解題說明:

Explanation

The terraform apply command changes both the cloud infrastructure and the state file after you approve the execution plan. The command creates, updates, or destroys the infrastructure resources to match the configuration. It also updates the state file to reflect the new state of the infrastructure.

The .terraform directory, the execution plan, and the Terraform code are not changed by the terraform apply command. References = Command: apply and Purpose of Terraform State

問題 #156

In Terraform HCL, an object type of object({name=string, age=number}) would match this value.

- A)
- B)
- C)
- D)
- A. Option A
- B. Option C
- **C. Option B**
- D. Option D

答案: C

問題 #157

.....

Testpdf是一個專門為一些IT認證考試提供針對性練習題及當前考試題目的培訓網站。我們針對熱門的HashiCorp Terraform-Associate-003 認證考試研究出來了最新的培訓方案，相信又可以滿足很多人的需求。HashiCorp Terraform-Associate-003 認證證書是很多知名IT企業錄用人的依據之一，所以這個認證考試現在很熱門。同時Testpdf也被很多人認可了，也很受一大部分人的信賴，也幫助了很多人都成就了小小的夢想。如果你選擇Testpdf卻沒有成功通過考試，Testpdf會全額退款給你。
