VMware Advanced VMware Cloud Foundation 9.0 Operation Sample Questions (Q275-Q280):

NEW QUESTION # 275
An administrator needs to add a fixed monthly "Management Fee" of $25.00 to every VM tagged with
"Department: Finance" to cover the cost of a managed service contract.
Which feature in the Cost Settings facilitates this specific adder?

- A. **Additional Costs**. The admin can create a new Additional Cost rule, define the amount (25), set the frequency (Monthly), and scope it to the "Department: Finance" group (or tag).
- B. Create a "Custom Property" on the VMs.
- C. Edit the "Server Hardware" cost driver and increase it by 25.
- D. Use the "Depreciation" tab to accelerate the write-off.

Answer: A

NEW QUESTION # 276
A team uses Ansible (Open Source) heavily for application configuration. They want to drag-and- drop their existing Ansible Playbooks onto the VCF Automation design canvas to run post-provisioning tasks on new VMs.
Which prerequisite must be met to enable this capability?

- A. Install the Ansible agent on every VM template.

- B. Configure an Ansible Integration in Assembler and specify the "Ansible Control Machine" (host) where the playbooks reside. This integration allows the canvas to inventory the playbooks and execute them via SSH/WinRM from the control node to the newly deployed VM.
- C. Enable "Cloud-Init".
- D. Convert all Playbooks to vRO Workflows.

Answer: B

NEW QUESTION # 277
A VCF Operator is configuring the "Global Data Retention" policy in VCF Operations to meet a regulatory requirement that demands all performance metrics be kept for at least 6 months.
Current Configuration
- Metric Retention: 2 Months
- Extended Metric Retention: Disabled
Storage Capacity
- Analytics Cluster: 80% Full
What is the most likely operational impact of changing the metric retention setting from 2 months to 6 months?

- A. VCF Operations will automatically delete the "Properties" data to make room for the extra Metrics.
- B. The system will automatically archive the extra 4 months of data to AWS S3.
- C. The change will take effect immediately without impact because VCF Operations uses deduplication.
- D. The available storage capacity on the analytics cluster will rapidly deplete as the system stops purging old data, potentially causing the cluster to go into "Read-Only" mode if disk usage exceeds critical thresholds (e.g., 90-95%).

Answer: D

NEW QUESTION # 278
A Cloud Admin is investigating why the "Management Domain" object in VCF Operations is showing a "Warning" health state. The administrator examines the following log events and object hierarchy.
(Select all that apply.)
Log Events - Source: vcf-ops-analytics
[ERROR] Adapter instance [SDDC-Adapter] unable to retrieve health for object 'sddc-manager-01'.
[WARN] Collection cycle skipped for resource 'vcenter-mgmt-01' due to high latency (450ms).
Object Hierarchy View
> VCF World
> Management Domain (sfo-m01) [State: Warning]
> SDDC Manager (sfo-m01-sddc01) [State: Unknown]
> vCenter (sfo-m01-vc01) [State: Healthy]
> NSX Manager (sfo-m01-nsx01) [State: Healthy]
Based on the logs and hierarchy, which statements accurately describe the root cause or impact?

- A. The Management Domain object health is rolling up the "Unknown" state of the SDDC Manager as a "Warning" or "Critical" condition.
- B. The VCF Operations analytics cluster is down, preventing all data processing.
- C. The NSX Manager is the root cause of the Management Domain warning due to a hidden critical alert.
- D. The high latency on vCenter collection suggests a network bottleneck between the Cloud Proxy and the Management Domain vCenter.
- E. The SDDC Manager adapter instance is failing to collect data, causing the SDDC Manager object state to become "Unknown".

Answer: A,D,E

NEW QUESTION # 279
A Cloud Admin receives a "Cluster Capacity Critical" alert indicating that the VCF Operations analytics cluster has reached 90% of its supported object count. The cluster currently consists of 4
"Large" nodes.
What is the recommended scaling strategy to address this capacity shortage while minimizing operational disruption?

- A. Replace the 4 "Large" nodes with 4 "Extra Large" nodes by performing a backup and restore to a new cluster.
- B. Perform a "Scale-Out" operation by deploying additional "Large" Data Nodes and joining them to the existing cluster online.
- C. Enable "Data Compression" in the Global Settings to immediately reduce the object count footprint by 50%.
- D. Delete 20% of the historical data to free up object slots.

Answer: B
