On this platform, you will get valid, updated, and real Actual4Exams ClaimCenter-Business-Analysts Dumps for quick exam preparation.

Guidewire ClaimCenter Business Analyst - Mammoth Proctored Exam Sample Questions (Q38-Q43):

NEW QUESTION # 38

An Adjuster at Succeed Insurance increases the reserve on a claim's exposure from \$1,000 to \$1,500 to account for inflation in repair costs. A week later, a Supervisor reviews the claim and wants to know specifically who made this change, the exact date and time it was made, and what the previous value was.

The Supervisor needs a chronological audit trail of changes to the claim file without navigating through complex financial ledgers. Which screen in the ClaimCenter user interface should the Supervisor access to find this information?

- A. Notes
- B. Financials > Transactions
- C. Loss Details > Status
- **D. History**

Answer: D

Explanation:

In Guidewire ClaimCenter, the History screen serves as the automated audit trail for the claim file. It is designed to capture and display a chronological list of significant events and user actions that have occurred throughout the claim's lifecycle.

* Audit Trail Functionality: The History screen automatically records specific types of events, including:

* Field Changes: When critical fields (like Reserve Amounts) are modified, the system logs the "Old Value" and the "New Value."

* Assignment Changes: Tracks when the claim was transferred from one user to another.

* Rule Execution: Logs when specific business rules (like "Exception Flagged") are triggered.

* Data Points: For each entry, the History screen displays the User who performed the action, the Timestamp of the event, and a Description of the change.

Why other options are incorrect:

* Financials > Transactions (A): While this screen shows the financial T-account entries (debits/credits) for the reserve increase, its primary purpose is accounting analysis. It is less efficient for a supervisor looking for a simple "Who/When/What" audit trail compared to the History screen.

* Notes (C): Notes are typically used for qualitative narratives and manual entry. While a system note can be generated for a reserve change, the History screen is the dedicated, non-editable system of record for tracking field changes.

* Loss Details > Status (D): This screen shows the current state of the claim (e.g., Open, Closed, Litigation Status) but does not provide a historical log of previous values or the specific user actions that led to the current state.

NEW QUESTION # 39

An Adjuster at Succeed Insurance increases the reserve on a claim's exposure from \$1,000 to \$1,500 to account for inflation in repair costs. A week later, a Supervisor reviews the claim and wants to know specifically who made this change, the exact date and time it was made, and what the previous value was.

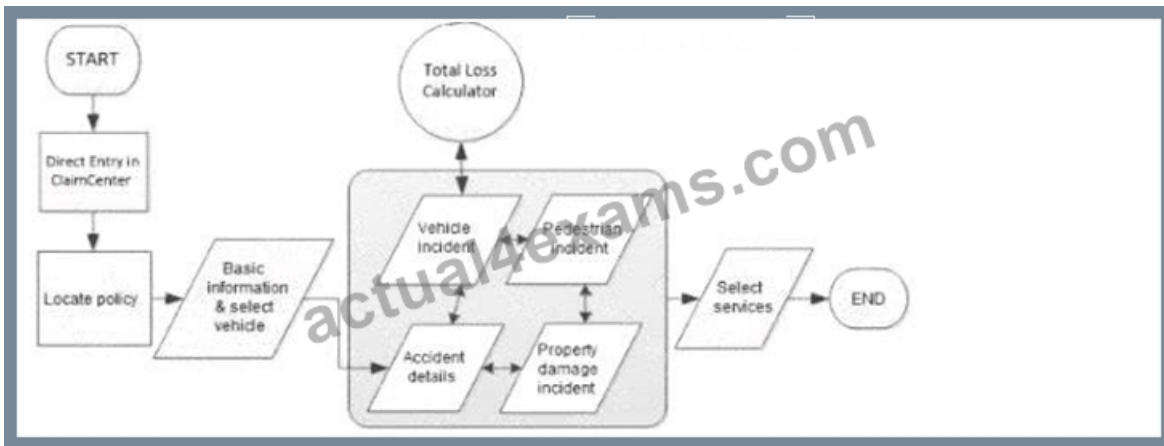

The Supervisor needs a chronological audit trail of changes to the claim file without navigating through complex financial ledgers. Which screen in the ClaimCenter user interface should the Supervisor access to find this information?

- A. Notes
- B. Financials > Transactions
- C. Loss Details > Status
- **D. History**

Answer: D

NEW QUESTION # 40

Whenever the Total Loss Calculator determines that a vehicle is a total loss, Succeed Insurance wants to create a custom history event with the exposure name and total loss score.

Which step in the claim setup process flow must be completed before the history event can be created?

- A. Add a new step after the Total Loss Calculator to create the history event.
- B. Add a new step after the Vehicle Incident step to create the history event.
- C. Add a new step before the Vehicle Incident step to create the history event.
- D. Add a new step before the Total Loss Calculator to create the history event.

Answer: A

Explanation:

250 to 350 words From Exact Extract of Guidewire ClaimCenter Business Analyst documentation:

In Guidewire ClaimCenter workflow analysis and configuration, defining the correct sequence of operations is critically dependent on Data Availability and Data Dependency.

The specific requirement here dictates that the custom history event must capture the Total Loss Score. In the context of the ClaimCenter object model and process flow, the Total Loss Score is an output value generated specifically by the Total Loss Calculator engine. Before this calculator runs, the score attribute is effectively null or non-existent.

Therefore, to satisfy the business requirement, the step that writes the history event must be placed after the step that generates the data it needs to record.

* Process Logic: If the Business Analyst were to place the history event creation step before the Total Loss Calculator (Option B) or before the Vehicle Incident (Option D), the system would attempt to write a record containing a score that has not yet been calculated. This would result in either a system error or a history event with a blank/zero value, failing to meet the business requirement.

* Dependency Chain: The workflow dependency is: Vehicle Data Entry -> Total Loss Calculation -> Score Generation -> History Event Creation.

* Implementation Note: In a typical Guidewire implementation, this logic is often handled via "Event Fired" rules or specific "Exit Points" in the workflow. The system waits for the confirmation that the Total Loss calculation service has successfully returned a result. Once that transaction is committed and the score is persisted on the Vehicle or Exposure entity, the subsequent rule to generate the History Event can trigger successfully.

Consequently, Option C is the only viable placement in the process flow. It ensures that the prerequisite action (calculation) is complete and the required data payload (the score) is available for the subsequent action (logging the history event).

NEW QUESTION # 41

Satisfied with the outcome of a Requirements Workshop, a Business Analyst (BA) attributed the success to preparation. The assigned task had been to document the requirements for capturing details on vehicle incidents for Personal Auto.

* Before the session, the BA reviewed ClaimCenter functionality by creating a new Personal Auto Claim involving physical damage to a vehicle.

* During review, the BA saw that ClaimCenter did not have a graphical representation of a vehicle with clickable hot spots to identify the damage areas like they have in their current application.

* Upon further research, the BA found that Guidewire does offer this functionality and even provides a Graphical Incident Capture Accelerator to ease implementation.

* During the workshop, the BA was able to clearly present all options for capturing vehicle incident details. Instead of having to develop the Vehicle Incident Capture functionality from scratch, the team was able to make a quick decision to add this functionality and end the meeting 30 minutes early.

Which two outcomes demonstrate the importance of preparing for a Requirements Workshop by becoming familiar with the features and functionality of ClaimCenter? (Choose two.)

- A. The BA was able to gain team acceptance of the base product process instead of the legacy system process.
- **B. The BA prevented the team from rebuilding something in a less effective way.**
- **C. The BA was able to compare their legacy process to how ClaimCenter handles the same business process.**
- D. The BA was able to make decisions in advance about where gaps existed and where changes were needed.

Answer: B,C

Explanation:

This scenario highlights the value of Feature Knowledge and Gap Analysis during preparation.

* Prevention of unnecessary work (Option A): Because the BA researched and found the "Graphical Incident Capture Accelerator," the team avoided the costly mistake of deciding to "develop the...

functionality from scratch." This is a direct outcome of the BA's preparation preventing an inefficient custom build.

* Comparison of Legacy vs. New (Option B): The text details that the BA "reviewed ClaimCenter functionality" and explicitly noted the difference ("saw that ClaimCenter did not have... like they have in their current application"). This ability to articulate the gap between the As-Is (Legacy) and the To-Be (Base ClaimCenter) allowed the BA to present the Accelerator as the perfect bridge solution.

Why other options are incorrect:

* Option C: The team did not accept the "base product process" (which lacked the graphics); they accepted the Accelerator (an add-on) to match the legacy expectation of clickable hot spots.

* Option D: The decision was not made "in advance." The text states the team made the "quick decision" during the workshop. The preparation enabled the team's decision, but the BA did not make it unilaterally beforehand.

NEW QUESTION # 42

What is a reason to assign a unique identification number to each User Story Card in ClaimCenter implementation projects?

- A. The number identifies total time estimated for building out the related User Story.
- B. The number helps to identify accepted and rejected Acceptance Criteria on Burndown Charts.
- C. The number provides the primary means for organizing tasks in backlog.
- **D. The number is used in the naming convention of: Product - Theme - Subtheme - ID number.**

Answer: D

Explanation:

In Guidewire implementation methodology (such as SurePath), traceability and organization are maintained through strict naming conventions.

* Naming Convention (Option C): A unique identification number is assigned to every User Story Card to create a consistent naming structure: Product - Theme - Subtheme - ID. (For example: CC - FNOL - Vehicle - 001).

* Purpose: This convention allows Business Analysts, Developers, and QA testers to easily reference, search, and trace requirements across different tools (e.g., from the Story Card in Excel/Jira to the code in Studio and the test cases in the testing suite).

* Why not A, B, or D? Time estimation (A) uses "Story Points," not the ID. Burndown charts (B) track velocity/points, not criteria IDs. Backlogs (D) are organized by Business Value/Priority, not just numerically by ID.

NEW QUESTION # 43

.....

They work together and put all their expertise to ensure the top standard of Channel Partner Program ClaimCenter Business Analyst - Mammoth Proctored Exam ClaimCenter-Business-Analysts valid dumps. Now the ClaimCenter Business Analyst - Mammoth Proctored Exam ClaimCenter-Business-Analysts exam dumps have become the first choice of Guidewire ClaimCenter-Business-Analysts Exam candidates.
