## Trend Micro Certified Professional for Deep Security Sample Questions (Q50-Q55):

### NEW QUESTION # 50

Which of the following VMware components is not required to enable agentless protection using Deep Security.

- A. VMware NSX
- B. VMware vRealize

- C. VMware vCenter
- D. VMware ESXi

**Answer: B**

Explanation:

Integrate with VMware vRealize Operations Manager

#### NEW QUESTION # 51

Your organization would like to implement a mechanism to alert administrators when files on a protected servers are modified or tampered with. Which Deep Security Protection Module should you enable to provide this functionality?

- **A. The Integrity Monitoring Protection Module**
- B. The File Inspection Protection Module
- C. The Intrusion Prevention Protection Module
- D. Deep Security can not provide this type of functionality

**Answer: A**

#### NEW QUESTION # 52

Which of the following statements is true regarding the Intrusion Prevention Protection Module?

- A. The Intrusion Prevention Protection Module blocks or allows traffic based on header information within data packets.
- B. The Intrusion Prevention Protection Module can identify changes applied to protected objects, such as the Hosts file, or the Windows Registry.
- C. The Intrusion Prevention Protection Module can prevent applications from executing, allowing an organization to block unallowed software.
- **D. The Intrusion Prevention Protection Module analyzes the payload within incoming and outgoing data packets to identify content that can signal an attack.**

**Answer: D**

Explanation:

deep-security-protection-modules

#### NEW QUESTION # 53

While viewing the details of the Firewall Protection Module, as displayed in the exhibit, you note that a few rules have already been assigned. You try to disable these rules, but they can not be unassigned. Why can the displayed rules not be unassigned?

- A. The rules displayed in the exhibit can not be unassigned as the administrator currently logged into the Deep Security Manager Web console does not have the permissions necessary to unassign rules.
- **B. The rules displayed in the exhibit have been assigned to the policy at the parent level. Rules assigned to a parent policy can not be unassigned at the child level.**
- C. The rules displayed in the exhibit have been hard-coded with the details of the policy. These rules will automatically be assigned to all Firewall policies that are created and can not be unassigned.
- D. The rules displayed in the exhibit were assigned to the policy automatically when a Recommendation Scan was run. Rules assigned through a Recommendation Scan can not be disabled once assigned.

**Answer: B**

#### NEW QUESTION # 54

Which of following statements best describes Machine Learning in Deep Security?

- A. Machine Learning is a malware detection technique in which the Deep Security Agent monitors process memory in real time and once a process is deemed to be suspicious, Deep Security will perform additional checks with the Smart Protection Network to determine if this is a known good process.
