CertiProf Certified ISO/IEC 27001:2022 Foundation Sample Questions (Q31-Q36):

NEW QUESTION # 31

What does ISO/IEC 27001:2022 require in order to evaluate information security performance and the effectiveness of the Information Security Management System?

- A. A person designated by top management with expertise to evaluate information security performance and system effectiveness
- B. A consultancy to accurately perform the evaluation of information security performance and validate the effectiveness of the management system
- **C. The organization must determine what needs to be monitored and measured, including information security processes and controls**
- D. Information security tools to evaluate information security performance and system effectiveness

Answer: C

Explanation:

ISO/IEC 27001:2022 requires the organization to determine what needs to be monitored and measured, including information security processes and controls, the methods for monitoring, measurement, analysis, and evaluation, when these activities will be performed, and when the results will be analyzed and evaluated.

The standard does not mandate a specific tool, consultant, or designated individual for compliance. Therefore, option C is the correct answer.

NEW QUESTION # 32

What are the phases of the PDCA cycle?

- A. Propose, Do, Validate, Act
- B. Plan, Validate, Verify, Act
- **C. Plan, Do, Check, Act**
- D. Plan, Do, Verify, Assure

Answer: C

Explanation:

The PDCA cycle stands for Plan, Do, Check, Act. It is a management model commonly associated with management systems, including the implementation and continual improvement of an ISMS. In the context of ISO/IEC 27001:2022, this logic supports planning the ISMS, implementing and operating it, monitoring and reviewing performance, and taking actions for continual improvement. Therefore, option B is correct.

NEW QUESTION # 33

In the context of clause 6.1 actions to address risks and opportunities, the weakness of an asset or control that can be exploited by a threat is known as:

- A. Threat
- B. Risk
- **C. Vulnerability**
- D. Impact

Answer: C

Explanation:

A vulnerability is a weakness of an asset, control, or other element that can be exploited by one or more threats. In information security risk assessment, vulnerabilities are considered together with threats, likelihood, and impact in order to understand and evaluate risk. A threat is a potential cause of an unwanted incident, while impact refers to the consequence. Therefore, option C is correct.

NEW QUESTION # 34

Which of the following activities are responsibilities of top management?

- A. All of the above
- B. Assigning the resources necessary to maintain the system
- C. Supporting the drive for continual improvement
- D. Ensuring compliance with the information security policy

Answer: A

Explanation:

ISO/IEC 27001:2022 requires top management to demonstrate leadership and commitment with respect to the ISMS. This includes ensuring that the information security policy and objectives are established, ensuring that the resources needed for the ISMS are available, and promoting continual improvement. Top management is also responsible for supporting relevant roles and ensuring that the ISMS achieves its intended outcomes.

Since all of the listed activities align with top management responsibilities, option D is correct.

NEW QUESTION # 35

According to the terms and definitions associated with ISO 27001, authenticity is defined as:

- A. None of the above
- B. The property that an entity is what it claims to be
- C. The ability to prove that a claimed event has occurred or that a claimed action was performed by the entities that originated it
- D. The property of consistency in behaviour and intended results

Answer: B

Explanation:

In ISO information security terminology, authenticity means the property that an entity is what it claims to be.

This concept is distinct from non-repudiation, which relates to the ability to prove that an event or action occurred and cannot later be denied. It is also distinct from integrity, which concerns accuracy and completeness. Therefore, option B is correct.
