# Pass Guaranteed 2026 FCP_GCS_AD-7.6: FCP - Google Cloud Security 7.6 Administrator Latest Latest Exam Format

P.S. Free & New FCP_GCS_AD-7.6 dumps are available on Google Drive shared by Pass4training:
https://drive.google.com/open?id=1fLXNM-LGezHwuTGNygFDtUFUeIPQ0ioV

Pass4training is a reliable study center providing you the valid and correct FCP_GCS_AD-7.6 questions & answers for boosting up your success in the actual test. FCP_GCS_AD-7.6 PDF file is the common version which many candidates often choose. If you are tired with the screen for study, you can print the FCP_GCS_AD-7.6 Pdf Dumps into papers. With the pdf papers, you can write and make notes as you like, which is very convenient for memory. We can ensure you pass with Fortinet study torrent at first time.

Our dumps bundle is available at an affordable rate. This bundle includes FCP_GCS_AD-7.6 PDF questions, Fortinet FCP_GCS_AD-7.6 desktop practice test software and a web-based practice test. Below are features of these three formats of our Fortinet FCP_GCS_AD-7.6 practice material. The Fortinet FCP_GCS_AD-7.6 practice test of Pass4training is beneficial to not only kill FCP - Google Cloud Security 7.6 Administrator exam anxiety but also to overcoming mistakes in your preparation.

## FCP_GCS_AD-7.6 Brain Dumps, Certified FCP_GCS_AD-7.6 Questions

Pass4training can provide professional and high quality products. It is the industry leader in providing IT certification information. To selecte Pass4training is to choose success. Pass4training's Fortinet FCP_GCS_AD-7.6 Exam Training materials is your magic weapon to success. With it, you will pass the exam and achieve excellent results, towards your ideal place.

## Fortinet FCP - Google Cloud Security 7.6 Administrator Sample Questions (Q23-Q28):

**NEW QUESTION # 23**
Refer to the exhibit.
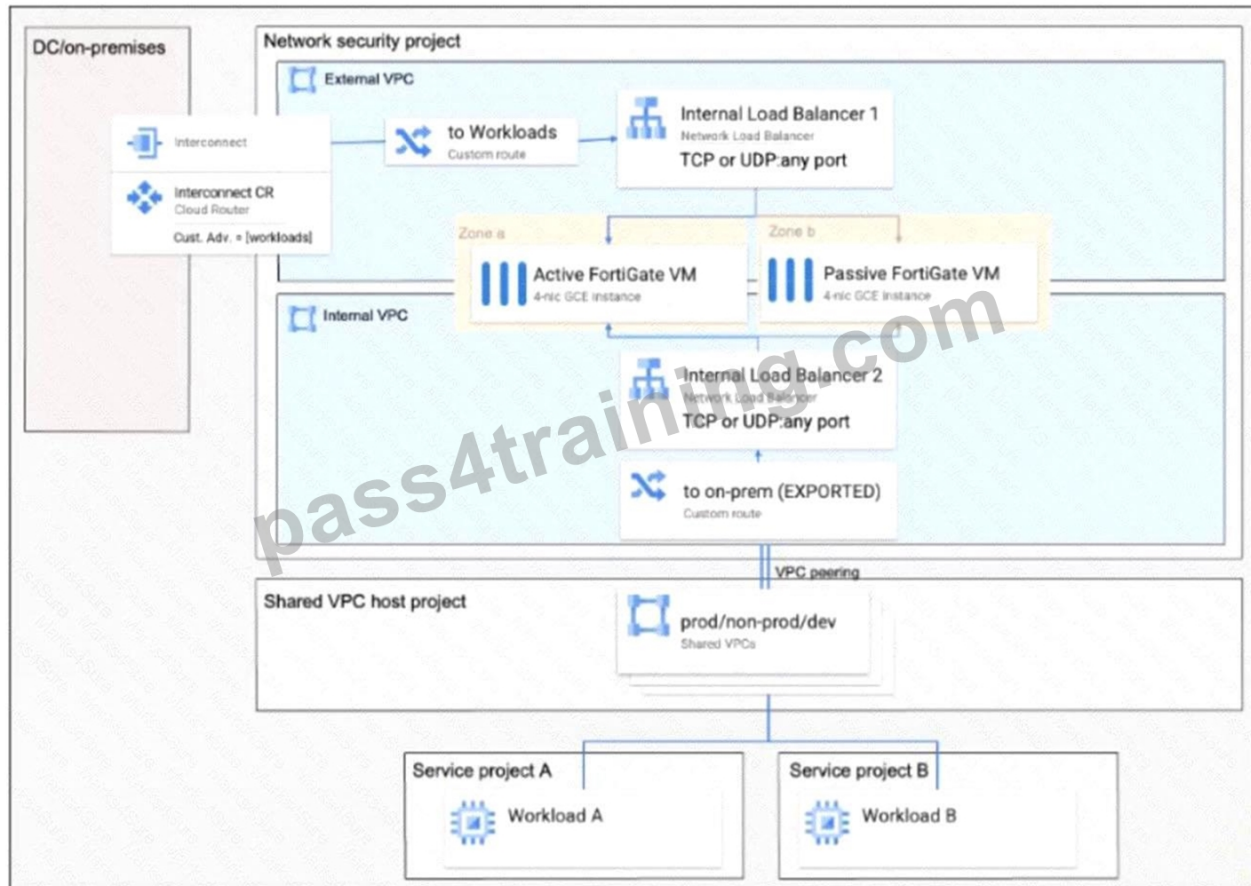

In this hybrid environment, in which two ways does the traffic flow from a network node in the on-premises network to Workload B in Google Cloud? (Choose two.)

- A. Traffic will be routed using VPC peering from the Internal VPC to the destination subnet.
- B. Traffic will not reach the FortiGate devices because both load balancers are internal.
- C. Once the traffic has been inspected, the active FortiGate uses VPC peering to forward the traffic to the Server project A VPC.
- D. When the packet reaches the external VPC, it is forwarded to the active FortiGate cluster member using a custom static route.

**Answer: A,D**

Explanation:
Traffic from on-premises enters the external VPC and is routed to the active FortiGate VM via custom routes for inspection.
After inspection, traffic is routed through VPC peering from the internal VPC to the service project subnet where Workload B resides.

**NEW QUESTION # 24**
You have been tasked with destroying all resources relating to a recent active-active high-availability (HA) FGSP Terraform deployment in Google Cloud.
What steps do you have to take to ensure a successful deletion? (Choose two.)

- A. Use the command terraform plan before destroying the Terraform template.
- B. Delete all dependencies to resources relating to the Terraform template.
- C. Delete all resources manually because active-active HA clusters cannot be destroyed using Terraform.
- D. Use the command terraform destroy to delete all resources deployed by the Terraform template.

**Answer: B,D**

Explanation:

Removing dependencies prevents resource conflicts during deletion.

terraform destroy is the correct command to cleanly and completely remove all resources created by the Terraform deployment.

**NEW QUESTION # 25**

Your organization has deployed an active-active high-availability (HA) FortiGate cluster in Google Cloud.

You have noticed a significant increase in asymmetrical traffic flow.

Which two actions can you take to mitigate the issue? (Choose two.)

- A. Enable symmetric hashing on the external load balancer.
- B. Enable source NAT for ingress traffic.
- C. Enable the layer 3 unified threat management (UTM) scanning feature if the FortiGate devices are on ForiOS 6.4 or later.
- D. Enable destination NAT for ingress traffic.

**Answer: A,B**

Explanation:

Enabling source NAT ensures consistent source IPs, promoting symmetric traffic flow.

Symmetric hashing on the load balancer helps distribute traffic flows evenly and consistently across cluster members, reducing asymmetric routing.

**NEW QUESTION # 26**

For what three reasons must you deploy a set of Google Cloud passthrough network load balancers for an active-passive high-availability (HA) FortiGate cluster instead of a set of Google Cloud proxy network load balancers? (Choose three.)

- A. Passthrough network load balancers can forward all protocols.
- B. Passthrough network load balancers terminate SSL connections.
- C. Passthrough network load balancers rely on API calls from FortiGate devices during HA failovers.
- D. Passthrough network load balancers offer the highest throughput.
- E. Passthrough network load balancers support health checks.
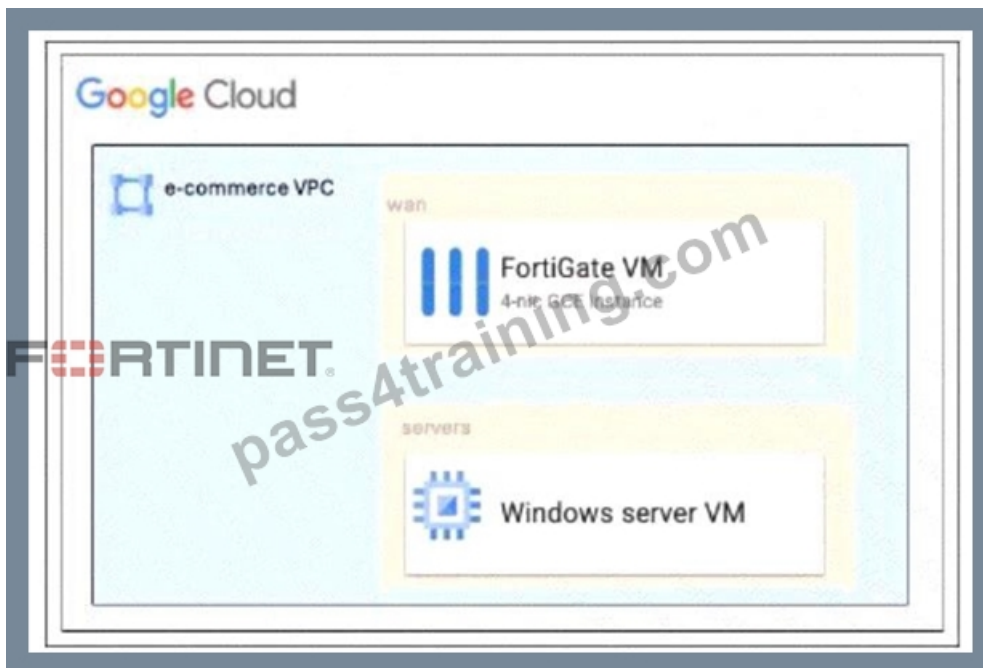

**Answer: A,D,E**

Explanation:

Passthrough load balancers support health checks to monitor backend health for failover.

They can forward all protocols, not limited to HTTP/HTTPS like proxy load balancers.

Passthrough load balancers provide higher throughput because they don't terminate sessions.

**NEW QUESTION # 27**

Refer to the exhibit.

An administrator is troubleshooting network connectivity issues between two VMs deployed in Google Cloud.
One VM is a FortiGate located in the subnet "wan" that is part of the VPC "e-commerce". The other VM is a Windows server located in subnet "servers", which is also in the "e-commerce" VPC.
What are two reasons you cannot pint the Windows server from FortiGate? (Choose two.)

- A. ICMP traffic is blocked between Google Cloud subnets by default.
- B. Add a Google Cloud firewall rule to allow ICMP traffic inbound to the Windows firewall VM.
- C. The default Google Cloud firewall policy does not allow this traffic.
- D. The Windows firewall is blocking the traffic.

**Answer: B,D**

Explanation:
Google Cloud firewall rules are stateful and, by default, do not allow ICMP traffic; you must explicitly allow ICMP inbound traffic to the Windows VM.
The Windows VM's own firewall might block ICMP traffic, preventing ping responses.

**NEW QUESTION # 28**

......

Due to busy routines, applicants of the FCP - Google Cloud Security 7.6 Administrator (FCP_GCS_AD-7.6) exam need real FCP - Google Cloud Security 7.6 Administrator (FCP_GCS_AD-7.6) exam questions. When they don't study with updated Fortinet FCP_GCS_AD-7.6 practice test questions, they fail and lose money. If you want to save your resources, choose updated and actual FCP - Google Cloud Security 7.6 Administrator (FCP_GCS_AD-7.6) exam questions of Pass4training.
