It focuses on delivering satisfying experiences by quickly and effectively addressing user needs and service issues.</li></ul>                            |

|      |  |
|------|--|
| 주제 4 | <ul style="list-style-type: none"> <li>Service Performance Metrics: This section of the exam measures the skills of IT Performance Analysts and covers how to identify and interpret key performance indicators and metrics. The focus is on evaluating service effectiveness and making data-driven decisions to improve service outcomes.</li> </ul>   |
| 주제 5 | <ul style="list-style-type: none"> <li>Continuous Improvement: This section of the exam measures the skills of Process Improvement Analysts and covers leveraging feedback and data to enhance services, processes, and practices. It supports the ITIL framework's emphasis on ongoing service enhancement and operational maturity.</li> </ul>   |
| 주제 6 | <ul style="list-style-type: none"> <li>Service Design and Development: This section of the exam measures the skills of Service Designers and covers how to design and develop services that align with both customer needs and business objectives. It includes identifying and defining service requirements, designing service components, and ensuring service quality throughout the development lifecycle.</li> </ul> |
| 주제 7 | <ul style="list-style-type: none"> <li>Service Delivery: This section of the exam measures the skills of IT Operations Managers and covers the core processes and activities essential for the effective delivery of IT services. It emphasizes the importance of managing service transitions and operations to maintain consistent, high-quality service output.</li> </ul>  |

## 최신 ITIL 4 Managing Professional ITIL-4-Specialist-Create-Deliver-and-Support 무료샘플문제 (Q21-Q26):

### 질문 # 21

Which concept is commonly applied to help organizations process and interpret unstructured text, with the aim to produce summaries or translations?

- A. Advanced analytics
- B. Artificial intelligence
- C. ITSM software
- D. Information models

정답: B

설명:

Artificial intelligence is commonly applied to process and interpret unstructured text, enabling tasks such as generating summaries, translations, and extracting meaningful insights.

### 질문 # 22

A mobile app development company has implemented a new strategy in its software development process. Instead of large, infrequent updates, it now releases smaller updates every two weeks. These updates are shaped by regular user reviews and suggestions, which the company actively seeks and incorporates into each new version. Which guiding principle is this approach MOST closely aligned with?

- A. Think and work holistically
- B. Optimize and automate
- C. Focus on value
- D. Progress iteratively with feedback

정답: D

설명:

This approach is most closely aligned with the guiding principle of progress iteratively with feedback (B).

The ITIL 4 Specialist: Create, Deliver and Support guide (Section 2.1.2) states: "Progress iteratively with feedback involves delivering work in smaller increments, using feedback from users to refine and improve services, ensuring alignment with needs and enhancing value stream efficiency." The two-week updates and user input exemplify this principle, contrasting with option A (holistic focus), option C (value focus without iteration), or option D (automation emphasis). The guide adds: "This principle supports rapid adaptation and quality improvement." Reference: ITIL 4 Specialist: Create, Deliver and Support, Section 2.1.2 - Guiding Principles.

### 질문 # 23

An internal service provider has made the service desk a single point of contact for all user queries, including incidents, service requests, complaints, and compliments. To ensure a fair allocation of the service desk resources, a common rule for processing all incoming queues has been agreed: "first in, first out." It has soon become apparent that some incidents reported by users spend too much time waiting to be processed and triaged by the service desk. This leads to delayed incident resolution and negative business impact. What is the BEST way to improve the situation?

- A. Implement separate service desks for incident and service requests
- **B. Prioritize incoming queries based on their type and associated urgency**
- C. Recommend users to submit queries well in advance to ensure timely processing
- D. Increase the number of service desk agents to process the incoming queries faster

정답: B

설명:

The best way to improve the situation is to prioritize incoming queries based on their type and associated urgency (B). The ITIL 4 Specialist: Create, Deliver and Support documentation (Section 4.2.3) states:

"Prioritization based on impact and urgency ensures that the most critical incidents are addressed promptly, optimizing resource use and minimizing business impact." The "first in, first out" rule fails when high-impact incidents are delayed, and this approach adjusts resource allocation dynamically. Option A increases costs without addressing prioritization; option C adds complexity; and option D shifts responsibility to users. The guide emphasizes: "Effective prioritization is a key practice in managing demand and ensuring service continuity." Reference: ITIL 4 Specialist: Create, Deliver and Support, Section 4.2.3 - Prioritization in Service Desk Operations.

### 질문 # 24

An organization experiences delays when creating and changing products and services. This is largely because software developers store code in their individual repositories.

Which approach would help to resolve this situation?

- A. Change enablement
- B. Continuous deployment
- **C. Continuous integration**
- D. Continuous delivery

정답: C

설명:

Continuous integration resolves delays by ensuring that developers frequently merge their code into a shared repository, enabling earlier detection of issues and smoother collaboration.

### 질문 # 25

A service provider is struggling to ensure timely incident resolution. The reports show that the majority of incidents that can be resolved without implementing a change are resolved on time. However, if an incident resolution requires a change, it is almost never implemented within the agreed incident resolution time. What is the BEST approach for the service provider to improve the situation?

- A. Review the incident resolution targets
- B. Review the incident management process
- C. Review the change authorization procedures
- **D. Review the incident resolution value stream**

정답: D

설명:

The best approach is to review the incident resolution value stream (D). The ITIL 4 Specialist: Create, Deliver and Support guide (Section 4.3.3) states: "Analyzing the incident resolution value stream identifies bottlenecks, such as delays in change implementation, and enables end-to-end optimization to meet agreed times." This holistic review addresses the specific issue of change-related delays, unlike option A (adjusting targets avoids fixing the problem), option C (narrowly focuses on authorization), or option D (misses the value stream context). The guide adds: "Value stream analysis is key to aligning incident and change processes."

## 질문 # 26
