

Download Icerttest CloudSec-Pro Exam Real Questions and Start Preparation Today

www.NWExam.com
This Palo Alto CloudSec-Pro study guide is designed to help cloud security professionals prepare effectively for the Palo Alto Networks Cloud Security Professional certification exam. It covers core CloudSec-Pro exam objectives, including cloud threat detection, Cortex Cloud capabilities, workload security, AI security posture management, investigation workflows, and incident response best practices. With structured content and practice-focused guidance, this guide helps candidates understand real-world cloud security scenarios, improve exam readiness, and build practical skills required to pass the CloudSec-Pro certification confidently.

P.S. Free 2026 Palo Alto Networks CloudSec-Pro dumps are available on Google Drive shared by Icerttest:
https://drive.google.com/open?id=1a4-m3IIUXpIglmK0tc_feTFreW56JTsJ

We can ensure you a pass rate as high as 99% of our CloudSec-Pro exam questions. So with our CloudSec-Pro study guide, you will pass the CloudSec-Pro exam. And this is the right thing you can imagine. You surely desire the CloudSec-Pro certification. So with a tool as good as our CloudSec-Pro Exam Material, why not study and practice for just 20 to 30 hours and then pass the examination? It is more convenient for you to study and practice anytime, anywhere with our varied versions of CloudSec-Pro exam braindumps.

Palo Alto Networks CloudSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Application Security: This domain covers security practices integrated throughout the software development lifecycle, including application security posture management, CI• CD pipeline security, software composition analysis, IaC security, and secrets scanning. It also explores real-world application security use cases and scan management.
Topic 2	<ul style="list-style-type: none">• Security Operations Center (SOC) Fundamentals: This domain covers the foundational components of a SOC, including team roles, tools, and technologies used in day-to-day security operations. It also addresses how AI• ML and threat intelligence support incident response, categorization, and prioritization.

Topic 3	<ul style="list-style-type: none"> • Cloud Posture Security: This domain examines the tools and practices used to assess and manage cloud security posture, spanning CSPM, KSPM, AI-SPM, and DSPM. It also covers agentless scanning, identity security, vulnerability management, unified compliance, and the role of Posture Security Management Modules.
Topic 4	<ul style="list-style-type: none"> • Cloud Runtime Security: This domain addresses the protection of cloud workloads during active operation, covering cloud workload protection, detection and response, web application and API security, and vulnerability management. It also includes the processes involved in deploying and managing security agents.
Topic 5	<ul style="list-style-type: none"> • Cortex Fundamentals: This domain focuses on the core features of the Cortex Cloud platform, including indicator types, log management, asset inventory, compliance, and data protection. It also covers how to create reports and dashboards and how data sources are ingested into the platform.

Prepare for the Palo Alto Networks CloudSec-Pro Exam with Icerttest Verified Pdf Questions

The Palo Alto Networks CloudSec-Pro pdf questions learning material provided to the customers from Icerttest is in three different formats. The first format is PDF format which is printable and portable. It means it can be accessed from tablets, laptops, and smartphones to prepare for the Palo Alto Networks CloudSec-Pro Exam. The Palo Alto Networks CloudSec-Pro PDF format can be used offline, and candidates can even prepare for it in the classroom or library by printing questions or on their smart devices.

Palo Alto Networks Cloud Security Professional Sample Questions (Q174-Q179):

NEW QUESTION # 174

A Prisma Cloud Administrator onboarded an AWS cloud account with agentless scanning enabled successfully to Prisma Cloud. Which item requires deploying defenders to be able to inspect the risk on the onboarded AWS account?

- A. Host compliances risks
- B. Container vulnerability risks
- **C. Container runtime risks**
- D. Host vulnerability risks

Answer: C

Explanation:

While agentless scanning in Prisma Cloud can effectively assess various risks in cloud environments, including host compliance and vulnerabilities, it does not extend to container runtime risks. To inspect risks associated with container runtimes, such as real-time threat detection, behavioral monitoring, and deep visibility into container activity, deploying Prisma Cloud Defenders is necessary. These Defenders are lightweight agents that provide an additional layer of security by monitoring containerized applications in real-time, thereby offering comprehensive protection against threats that may arise during the runtime phase of containers.

NEW QUESTION # 175

Which two attributes of policies can be fetched using API? (Choose two.)

- **A. policy mode**
- **B. policy label**
- C. policy violation
- D. policy signature

Answer: A,B

Explanation:

Using the Prisma Cloud API, users can fetch various attributes of policies, including the policy label (Option A) and policy mode (Option C). The policy label helps in categorizing and organizing policies, while the policy mode determines how the policy is enforced (e.g., alert, enforce). The policy signature (Option B) is not a standard attribute exposed via the API for fetching, as it relates more to the internal identification and handling of policies. The policy violation (Option D) is an outcome or event resulting from a policy breach, not an attribute of the policy itself that can be fetched via the API.

NEW QUESTION # 176

Which three Orchestrator types are supported when deploying Defender? (Choose three.)

- A. Docker Swarm
- B. Azure ACS
- C. Amazon ECS
- D. Kubernetes
- E. Red Hat OpenShift

Answer: C,D,E

Explanation:

Kubernetes, Openshift, ECS <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/install/deploy-defender/orchestrator> Prisma Cloud supports integration with multiple orchestrators to facilitate the deployment of its Defender component in various environments. The supported orchestrators include Red Hat OpenShift, Amazon ECS, and Kubernetes. These platforms are supported because they provide robust environments for container orchestration, allowing Prisma Cloud to efficiently manage security operations across different cloud-native technologies.

NEW QUESTION # 177

A customer does not want alerts to be generated from network traffic that originates from trusted internal networks. Which setting should you use to meet this customer's request?

- A. Trusted Alert IP Addresses
- B. Trusted Login IP Addresses
- C. Enterprise Alert Disposition
- D. Anomaly Trusted List

Answer: A

Explanation:

B --> Anomaly Trusted List-Exclude trusted IP addresses when conducting tests for PCI compliance or penetration testing on your network. Any addresses included in this list do not generate alerts against the Prisma Cloud Anomaly Policies that detect unusual network activity such as the policies that detect internal port scan and port sweep activity, which are enabled by default. C --> Trusted Alert IP Addresses-If you have internal networks that connect to your public cloud infrastructure, you can add these IP address ranges (or CIDR blocks) as trusted ... Prisma Cloud default network policies that look for internet exposed instances also do not generate alerts when the source IP address is included in the trusted IP address list and the account hijacking anomaly policy filters out activities from known IP addresses. Also, when you use RQL to query network traffic, you can filter out traffic from known networks that are included in the trusted IP address list.

For a customer who does not want alerts to be generated from network traffic originating from trusted internal networks, the appropriate setting is C. Trusted Alert IP Addresses. This setting allows for specifying certain IP addresses as trusted, meaning alerts will not be triggered by activities from these IPs, ensuring that internal network traffic is not flagged as potentially malicious.

NEW QUESTION # 178

Which three incident types will be reflected in the Incident Explorer section of Runtime Defense? (Choose three.)

- A. Crypto miners
- B. Cross-Site Scripting
- C. Brute Force
- D. SQL Injection
- E. Port Scanning

Answer: A,C,E

Explanation:

This section describes the incident types surfaced in Incident Explorer.

Altered binary

Backdoor admin accounts

Backdoor SSH access

Brute force

Crypto miners

Execution flow hijack attempt

Kubernetes attack

Lateral movement

Malware

Port scanning

Reverse shell

Suspicious binary
