## 2026 AB-731 Valid Exam Dumps 100% Pass | High-quality Microsoft AI Transformation Leader Exam Success Pass for sure

PassTorrent AB-731 exam braindumps are authorized legal products which is famous for its high passing rate. Our dumps can cover nearly 95% questions of the real test, our answers and explanations are edited by many experienced experts and the correct rate is 100%. Our Microsoft AB-731 Exam Braindumps provide three versions to satisfy different kinds of customers' habits: PDF version, Soft test engine and APP test engine.

## Microsoft AI Transformation Leader Sample Questions (Q35-Q40):

**NEW QUESTION # 35**
Which of the following capability is a key benefit of Microsoft Copilot experiences across business applications and productivity tools?

- A. Managing physical data center infrastructure
- B. Performing network packet inspection
- C. Replacing enterprise identity providers
- D. Generating contextual responses and content using organizational data

**Answer: D**

Explanation:
Microsoft Copilot uses large language models combined with Microsoft Graph and organizational data to generate contextual insights, summaries, and content tailored to business needs.
Reference:

## NEW QUESTION # 36

Your company is preparing to adopt Microsoft 365 Copilot and wants to follow Microsoft responsible AI principles. As a business leader, you propose establishing an AI governance council to ensure alignment with the responsible AI principles. What is the primary purpose of the council? More than one answer choice may achieve the goal. Select the BEST answer.

- A. to guide strategy, provide oversight, and ensure cross-functional alignment for responsible AI adoption
- B. to oversee implementation, manage technical performance, and ensure successful AI deployment
- C. to monitor user behavior and enforce compliance with internal IT policies
- D. to train employees on how to use Copilot features effectively

**Answer: A**

Explanation:
An AI governance council (often called an "AI Council") exists primarily to set direction and provide cross- functional oversight so AI adoption stays aligned to the organization's values, risk posture, and Responsible AI commitments. That maps most directly to D . Microsoft's guidance on creating an AI Council describes leadership responsibilities such as defining and communicating the organization's AI vision, values, and policies , reviewing and approving AI use cases/projects, and coordinating with enablement and technical readiness teams to understand risks, issues, and opportunities. It also emphasizes representation across distinct functions (for example: senior leadership, legal, compliance, risk, ethics, data, technology, business, HR) to ensure governance decisions reflect a broad, accountable perspective.
The other options describe activities that may be supporting outcomes of governance, but they are not the council's primary purpose. A is narrow (IT policy enforcement/user monitoring) and is typically handled by security/compliance operations rather than the top-level governance body. B is user enablement/training (commonly owned by adoption/change management teams). C focuses on technical delivery and performance management (often owned by engineering/MLOps/service owners). The governance council's central value is strategic guidance + oversight + cross-functional alignment to ensure Responsible AI adoption is consistent, accountable, and sustainable across the business.

## NEW QUESTION # 37

An organization wants to enhance employee productivity by using generative AI within tools such as Word, Excel, PowerPoint, Outlook, and Teams.
The solution must assist users by generating content, summarizing meetings, analyzing data, and drafting communications within their daily workflow.
Which solution should the organization implement?

- A. Microsoft Defender for Cloud
- B. Azure AI Vision
- C. Azure Machine Learning
- D. Microsoft 365 Copilot

**Answer: D**

Explanation:
Microsoft 365 Copilot embeds generative AI capabilities directly into Microsoft 365 applications, enabling users to generate content, summarize meetings, analyze spreadsheets, and draft communications within their daily productivity tools such as Word, Excel, PowerPoint, Outlook, and Teams.
References:

## NEW QUESTION # 38

Hotspot Question
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:
Box 1: Yes
Yes - Microsoft 365 Copilot enable you to index data from multiple sources to make the data available in Copilot.
Microsoft 365 Copilot enables you to index data from multiple external, non-Microsoft sources- such as Salesforce, Jira, Confluence, and enterprise databases-into the Microsoft Graph to make that data available, searchable, and actionable within Copilot. This is primarily achieved through Microsoft Graph Connectors and Copilot Studio.
Box 2: Yes
Yes - You can build custom Microsoft 365 Copilot connector when the available connectors do not meet your data integration requirements.
Building a custom Microsoft 365 Copilot connector is the recommended approach when pre-built connectors do not meet specific data integration requirements, allowing you to bring external, line-of-business data into the Microsoft Graph for Copilot to reason over.
Box 3: No
No - To use Microsoft 365 Copilot connectors, you need a Microsoft Copilot Studio license.
This is not entirely correct. While Microsoft Copilot Studio is a primary tool for managing extensions, you do not necessarily need a standalone Copilot Studio license to use Microsoft 365 Copilot connectors.

**NEW QUESTION # 39**
You plan to meet with stakeholders to discuss how generative AI can benefit your company. You need to provide a relevant description of generative AI. Which description should you use?

- A. Generative AI is designed to predict future trends based on historical data.
- B. Generative AI is designed to recommend products based on user behavior.
- C. Generative AI is designed to translate documents into other languages.
- D. Generative AI is designed to generate responses based on a user's natural language prompts.

**Answer: D**

Explanation:
Generative AI's defining capability is producing new content (text, images, code) in response to instructions-most commonly provided as natural language prompts. Option A best captures that general- purpose description for stakeholders: users ask questions or provide instructions, and the system generates responses or drafts content accordingly.
B is a specific application (translation) that generative AI can do, but it's not the defining description. C describes predictive analytics/forecasting, which is a different AI category. D describes recommendation systems, typically driven by user behavior and ranking algorithms, which can be enhanced by AI but is not the core definition of generative AI.

**NEW QUESTION # 40**
......

PassTorrent is one of the leading platforms that has been helping AI Transformation Leader Exam Questions candidates for many years. Over this long time, period the AI Transformation Leader (AB-731) exam dumps helped countless Microsoft AB-731 exam questions candidates and they easily cracked their dream AI Transformation Leader (AB-731) certification exam. You can also trust AI Transformation Leader (AB-731) exam dumps and start Microsoft AB-731 exam preparation today.
