## SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q48-Q53):

### NEW QUESTION # 48

Which features of Business Builder enhance semantic modeling?

There are 2 correct answers to this question.

Response:

- A. Create calculated measures
- B. Define business entities
- C. Load CSV files directly
- D. Assign email notifications

**Answer: A,B**

### NEW QUESTION # 49

How can you create a local table with a custom name in SAP Datasphere? Note: There are 2 correct answers to this question.

- A. By creating an intelligent lookup
- B. By adding an output of a data flow
- C. By importing a CSV file
- D. By creating a persistent snapshot of a view

**Answer: B,C**

Explanation:

In SAP Datasphere, there are several ways to create a local table with a custom name, providing flexibility for data management. Two common methods are by importing a CSV file and by adding an output of a data flow. When you import a CSV file, Datasphere allows you to specify a custom name for the new local table that will store the imported data. This is a quick and straightforward way to bring external, flat-file data into Datasphere. Secondly, a data flow in Datasphere allows you to define a sequence of operations (e.g., transformations, aggregations) and write the processed data to a target. When configuring the output of a data flow, you can specify a new local table and provide it with a custom name. This method is ideal for creating structured tables as a result of complex data integration or transformation processes. These options ensure that users can create and name tables according to their specific data modeling and organizational requirements.

### NEW QUESTION # 50

How does SAP Business Data Cloud support self-service analytics enablement?

Please choose the correct answer.

Response:

- A. By offering static reports through scheduled email
- B. By embedding dashboards into Microsoft Excel
- C. By using SAP NetWeaver Gateway integration
- D. By exposing business-friendly models to SAP Analytics Cloud

**Answer: D**

### NEW QUESTION # 51

Which semantic usage type does SAP recommend you use in an SAP Datasphere graphical view to model master data?

- A. Fact
- B. Dimension
- C. Relational Dataset
- D. Analytical Dataset

**Answer: B**

Explanation:

When modeling master data within an SAP Datasphere graphical view, SAP strongly recommends using the Dimension semantic usage type. Master data, such as customer information, product details, or organizational hierarchies, provides context and descriptive attributes for transactional data. Marking a view as a "Dimension" explicitly signals to downstream consumption tools (like SAP Analytics Cloud) and other Datasphere models that this view contains descriptive attributes that can be used for filtering, grouping, and providing context to analytical queries. This semantic tagging ensures that the data is interpreted and utilized correctly in analytical scenarios, distinguishing it from "Fact" data (which represents transactional measures) or "Relational Dataset" (a more generic type without specific analytical semantics). Using the "Dimension" semantic usage type aligns with best practices for building robust and understandable data models for analytics.
