There is plenty of skilled and motivated staff to help you obtain the Oracle Manufacturing Cloud 2025 Implementation Professional exam certificate that you are looking forward. We have faith in our professional team and our 1z0-1075-25 Study Tool, and we also wish you trust us wholeheartedly. Because of this function, you can easily grasp how the practice system operates and be able to get hold of the core knowledge about the Oracle Manufacturing Cloud 2025 Implementation Professional exam. In addition, when you are in the real exam environment, you can learn to control your speed and quality in answering questions and form a good habit of doing exercise, so that you're going to be fine in the Oracle Manufacturing Cloud 2025 Implementation Professional exam.

Are you ready to gain all these 1z0-1075-25 certification benefits? Looking for a simple, smart, and quick way to pass the challenging 1z0-1075-25 exam? If your answer is yes then you need to enroll in the 1z0-1075-25 exam and prepare well to crack this 1z0-1075-25 exam with good scores. In this career advancement journey, you can get help from Fast2test. The Fast2test will provide you with real, updated, and error-free Oracle 1z0-1075-25 Exam Dumps that will enable you to pass the final 1z0-1075-25 exam easily.

1z0-1075-25 Instant Download - 1z0-1075-25 Complete Exam Dumps

It is a truth well-known to all around the world that no pains and no gains. There is another proverb that the more you plough the

more you gain. When you pass the 1z0-1075-25 exam which is well recognized wherever you are in any field, then acquire the 1z0-1075-25 certificate, the door of your new career will be open for you and your future is bright and hopeful. Our 1z0-1075-25 guide torrent will be your best assistant to help you gain your certificate.

Oracle Manufacturing Cloud 2025 Implementation Professional Sample Questions (Q17-Q22):

NEW QUESTION # 17

Production operations need operators to execute the right steps to produce quality products, so want to use "View Document Items on a Dispatch List." Which statement is NOT true?

- A. You can add attachments to the document item and invoke the engineering change order to release the latest revision of the document item and attachment.
- B. You can view the document item attachment in the dispatch list and on the Manage Supplier Operations page by using the attachment icon.
- C. You cannot view the document item attachment on the Manage Supplier Operations page.
- D. You will always see the active revision of the attachment from currently effective revision of the document from Master Organization.

Answer: D

Explanation:

When using the "View Document Items on a Dispatch List" functionality, production operators can view and access necessary document attachments to ensure correct steps in the manufacturing process. The statement that is not true is:

* Statement B is incorrect because you do not always see the active revision of the attachment from the currently effective revision in the Master Organization. The revision displayed in the dispatch list may depend on the specific version that was assigned to the work order or operation at the time of creation, not necessarily the most current revision in the Master Organization.

Correct statements:

* Statement A : Document attachments cannot be viewed on the Manage Supplier Operations page.

* Statement C : Attachments can be added to document items, and updates can be managed through engineering change orders.

* Statement D : Document item attachments are viewable both in the dispatch list and on the Manage Supplier Operations page via the attachment icon.

Oracle Manufacturing Cloud's "Dispatch List" functionality documentation outlines how document item attachments are handled and displayed.

NEW QUESTION # 18

Which three requirements are fulfilled by nonstandard work orders?

- A. Rescheduling
- B. Rework
- C. Prototype
- D. Repair

Answer: B,C,D

Explanation:

Nonstandard work orders in Oracle Manufacturing Cloud are used for specialized tasks that do not follow typical production processes. The following are the main requirements fulfilled by nonstandard work orders:

* Repair : Nonstandard work orders can be used for maintenance and repair tasks to fix or refurbish defective or damaged items.

* Rework : These work orders are also used for rework processes, where a product needs to be reprocessed to meet quality standards or specifications.

* Prototype : Nonstandard work orders can handle prototype production, where items are produced in small quantities for testing and development before mass production.

Rescheduling (A) is typically handled by standard work orders in the production schedule rather than through nonstandard work orders.

Oracle Manufacturing Cloud documentation on "Nonstandard Work Orders" explains how they are used for tasks such as repair, rework, and prototype manufacturing.

NEW QUESTION # 19

Your client needs to implement operational checks for compliance with training and job requirements. Which four statements are true about this functionality?

- A. The qualification Is enforced during reporting of labor usage.
- B. You have the ability to associate a Job profile with a Standard operation resource.
- C. You do not have the ability to associate a Job profile with a Work order operation resource.
- D. A qualified operator need not be specified to report resource transactions.
- E. You have the ability to associate a Job profile with a Work definition operation resource.
- F. The qualification Is used to warn a production supervisor If they assign operators that don ' t meet the skill requirements against the resource.

Answer: A,B,E,F

Explanation:

Oracle Manufacturing Cloud provides functionality to enforce compliance with training and job requirements through operational checks. The correct statements are:

- * Statement B : You can associate a job profile with a work definition operation resource. This ensures that only operators who meet the job requirements are allowed to perform the work.
- * Statement C : Qualifications are enforced when reporting labor usage, meaning that if an operator lacks the required qualifications, the system can prevent or warn about the labor transaction.
- * Statement D : You can also associate a job profile with a standard operation resource to enforce skills and training compliance.
- * Statement F : If an unqualified operator is assigned to a task, the system can notify the production supervisor to avoid non-compliance with skill requirements.

Incorrect options:

- * Statement A : A qualified operator must be specified to report resource transactions.
- * Statement E : You can associate a job profile with a work order operation resource, contrary to what is implied.

Oracle Manufacturing Cloud documentation on "Operational Checks for Compliance " explains the enforcement of job profiles and qualifications in production operations.

NEW QUESTION # 20

Your customer has multiple distribution centers and a few manufacturing plants. The plants manufacture different items with some overlap between them. The distribution centers stock parts from all plants.

A Corporate Engineering team is responsible for centrally defining items and catalogs. This team defines the items and sets the attributes for most parameters. The respective distribution centers and manufacturing plants must be allowed to change some attributes locally.

What is the best way to achieve this?

- A. Set up plants, distribution centers, and the Corporate Engineering organization as inventory organizations.
- B. Set up plants and distribution centers as inventory organizations, and the Corporate Engineering organization as an Item organization.
- C. Set up plants and the Corporate Engineering organization as item organizations, and distribution centers as inventory organizations.
- D. Set up plants and the Corporate Engineering organization as Inventory organizations, and distribution centers as item organizations.
- E. Set up plants as inventory organizations, and distribution centers and the corporate Engineering organization as item organizations.

Answer: B

Explanation:

In Oracle Cloud, managing items and their attributes across multiple organizations requires careful structuring of inventory and item organizations. The best way to configure this setup given the customer ' s requirements is as follows:

* Plants and Distribution Centers as Inventory Organizations : Inventory organizations are required to manage on-hand quantities, perform transactions, and handle the physical movement of materials.

Plants need to be inventory organizations to manage production, and distribution centers need to be inventory organizations to manage stocking and distribution.

* Corporate Engineering Organization as an Item Organization : An item organization is responsible for centrally defining item attributes. By setting the Corporate Engineering team as an item organization, you ensure that item definitions are controlled centrally. The team can define standard attributes while allowing inventory organizations (plants and distribution centers) to modify certain

attributes at their level based on local needs.

This structure allows for centralized item management with localized flexibility for plants and distribution centers.

Oracle SCM Cloud guides for "Item and Inventory Organizations" explain how item organizations allow centralized management of item definitions while inventory organizations handle the physical inventory and can override certain attributes locally.

Incorrect Options:

A : Defining all entities as inventory organizations would not allow centralized control of item attributes.

C , D , E : These setups would either limit the ability to control item attributes centrally or misassign organizations that need to handle physical inventory as item-only organizations.

NEW QUESTION # 21

A manufacturing plant works in two shifts of eight hours each. A Manufacturing user wants four units of a work center resource, R1, to be available during nonworking time, outside the regular shift on a particular day.

Which is the correct sequence of steps to create a resource exception on the Manage Work Center Resource Calendar page?

- A. Click outside the existing shift time on a specific date > Go to the Create Work Center page > Click the Resource Availability tab > Click the Add icon > Select R1 from the Resource drop-
- B. Click inside the existing shift time on a specific date > Go to the Actions menu > Select Create Resource Exception > Populate the Start and Duration Fields > Go to the Resource Availability region > Populate A units in the Default Availability column.
- C. Click Inside the existing shift time on a specific date > Go to the Create Work Center page > Click the Resource Availability tab > Click the Add icon > Select R1 from the Resource dropdown list > Enter 4 in Default Units Available.
- **D. Click outside the existing shift time on a specific date > Go to the Actions menu > Select Create Resource Exception > Populate the Start and Duration fields > Go to the Resource Availability and Overrides region > Populate 4 units in the Availability Override column.**

Answer: D

Explanation:

In Oracle Manufacturing Cloud, to make a resource (R1) available outside the regular shift for a specific day, you need to create a resource exception. This allows you to override the default shift schedule and make additional units of the resource available.

* Click outside the existing shift time ensures that the exception applies to non-working hours.

* Select Create Resource Exception from the Actions menu to initiate the exception.

* Populate the Start and Duration fields to define the non-working period during which the resource will be available.

* Enter 4 units in the Availability Override column to ensure that 4 units of resource R1 are made available for use during the exception period.

Oracle Manufacturing Cloud guide on managing resource calendars explains how to override shift availability using the resource exception functionality to schedule resources outside of normal working hours.

NEW QUESTION # 22

.....

Often candidates fail the 1z0-1075-25 exam due to the fact that they do not know the tactics of attempting the Oracle Manufacturing Cloud 2025 Implementation Professional (1z0-1075-25) exam in an ideal way. The decisive part is often effective time management. Some Oracle 1z0-1075-25 Exam Questions demand more attention than others, which disturbs the time allotted to each topic. The best way to counter them is to use an updated 1z0-1075-25 Dumps.
