

Top 156-315.81 Online Tests | High Pass-Rate CheckPoint 156-315.81: Check Point Certified Security Expert R81 100% Pass

What's more, part of that LatestCram 156-315.81 dumps now are free: <https://drive.google.com/open?id=1KnE75e3euMTRjYYHEppRKB7TFbKgt6bt>

Our company always lays great emphasis on service. All of our works have good sense of service. Once you browser our website and select the 156-315.81 exam questions, we have arrange all study materials separately and logically. You will know the details if you click the 156-315.81 practice quiz. You will find that it is easy, fast and convenient. And if you have something confused on our 156-315.81 learning braindumps, then you can contact with our service online or send email to us. We will help you in the first time.

The Check Point Certified Security Expert R81 (156-315.81) Certification Exam is intended for security professionals, network administrators, and engineers who want to demonstrate their expertise in implementing and managing Check Point security solutions. Check Point Certified Security Expert R81 certification exam contains multiple-choice questions and scenarios that test the candidate's ability to configure and manage a wide range of Check Point products.

The Check Point Certified Security Expert R81 certification exam is a vendor-specific certification that is offered by Check Point Software Technologies Ltd. 156-315.81 Exam validates the candidate's knowledge and skills in implementing and managing Check Point security solutions, and the certification is recognized globally as a standard for measuring the skills of security professionals. Check Point Certified Security Expert R81 certification exam is an essential requirement for security professionals who wish to advance their careers and demonstrate their expertise in implementing and managing Check Point security solutions.

156-315.81 Test Dates, Valid Dumps 156-315.81 Sheet

We all known that most candidates will worry about the quality of our product, In order to guarantee quality of our study materials, all workers of our company are working together, just for a common goal, to produce a high-quality product; it is our 156-315.81 exam questions. If you purchase our 156-315.81 Guide Torrent, we can guarantee that we will provide you with quality products, reasonable price and professional after sales service. I think our 156-315.81 test torrent will be a better choice for you than other study materials.

Passing the Check Point Certified Security Expert R81 exam is a significant accomplishment in the cybersecurity industry. It demonstrates that the candidate has a deep understanding of Check Point's security solutions, and they have the skills and knowledge to implement them effectively. Check Point Certified Security Expert R81 certification is highly respected in the industry and is recognized globally.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q57-Q62):

NEW QUESTION # 57

Which Check Point software blade provides Application Security and identity control?

- A. Data Loss Prevention
- **B. Application Control**
- C. URL Filtering
- D. Identity Awareness

Answer: B

Explanation:

Application Control is the software blade that provides Application Security and identity control. It allows administrators to define granular policies based on users or groups to identify, block or limit the usage of web applications and widgets. Application Control also integrates with Identity Awareness to provide user-level visibility and control. Reference: Training & Certification | Check Point Software, Check Point Resource Library

NEW QUESTION # 58

Which of the following processes pulls the application monitoring status from gateways?

- **A. cpd**
- B. cpm
- C. fwm
- D. cpwd

Answer: A

Explanation:

The process that pulls the application monitoring status from gateways is cpd¹. The cpd process is responsible for the communication between the Security Management Server and the Security Gateway². It handles tasks such as policy installation, status reporting, logging, and synchronization². The cpd process also monitors the application status of the Security Gateway, such as CPU, memory, disk space, and processes³. The cpd process sends this information to the Security Management Server, which displays it in SmartConsole and SmartView Monitor³.

NEW QUESTION # 59

Which statement is NOT TRUE about Delta synchronization?

- A. Transfers changes in the Kernel tables between cluster members.
- **B. Using UDP Multicast or Broadcast on port 8161**
- C. Quicker than Full sync
- D. Using UDP Multicast or Broadcast on port 8116

Answer: B

Explanation:

The statement that is not true about Delta synchronization is Using UDP Multicast or Broadcast on port 8161. Delta synchronization is a mechanism that transfers only the changes in the kernel tables between cluster members, instead of sending the entire tables. It uses UDP Multicast or Broadcast on port 8116, not 8161². The other statements are true about Delta synchronization. Reference: Check Point R81 ClusterXL Administration Guide

NEW QUESTION # 60

How do you enable virtual mac (VMAC) on-the-fly on a cluster member?

- A. cphaprob set int fwaha_vmac_global_param_enabled 1
- B. clusterXL set int fwaha_vmac_global_param_enabled 1
- C. fw ctl set int fwaha_vmac_global_param_enabled 1
- D. cphaconf set int fwaha_vmac_global_param_enabled 1

Answer: C

Explanation:

To enable VMAC mode on a cluster member, you need to set the value of the global kernel parameter fwaha_vmac_global_param_enabled to 1. This can be done on-the-fly using the command fw ctl set int fwaha_vmac_global_param_enabled 1 on all cluster members. This command does not require a reboot or a policy installation. VMAC mode allows the cluster to use a virtual MAC address for its virtual IP addresses, which reduces the number of gratuitous ARP packets sent upon failover and avoids ARP cache issues on some routers and switches. References: How to enable ClusterXL Virtual MAC (VMAC) mode

NEW QUESTION # 61

How is communication between different Check Point components secured in R81? As with all questions, select the BEST answer.

- A. By using 3DES
- B. By using IPSEC
- C. By using SIC
- D. By using ICA

Answer: C

Explanation:

Communication between different Check Point components is secured by using SIC, which stands for secure internal communication. SIC is a certificate-based channel that uses standards-based TLS 1.2 for creating secure connections and AES128 for encryption. SIC ensures that only authorized components can communicate with each other and that the communication is protected from eavesdropping and tampering.

SIC is established by using a one-time password (OTP) that is generated when a Check Point component is created or installed. The OTP is used to initialize the trust relationship between the component and the Security Management Server, which acts as an internal certificate authority (ICA) that issues and revokes certificates for the components.
