

Free PDF Quiz 2026 Fortinet FCP_FSA_AD-5.0: High Pass-Rate FCP - FortiSandbox 5.0 Administrator Sample Questions Pdf

With the rapid development of computer, network, and semiconductor techniques, the market for people is becoming more and more hotly contested. Passing a FCP_FSA_AD-5.0 exam to get a certificate will help you to look for a better job and get a higher salary. If you are worried about your job, your wage, and a FCP_FSA_AD-5.0 Certification, if you are going to change this, we are going to help you solve your problem by our FCP_FSA_AD-5.0 exam torrent with high quality, now allow us to introduce you our FCP_FSA_AD-5.0 guide torrent.

Fortinet FCP_FSA_AD-5.0 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Integration: This domain explains how to integrate FortiSandbox within the Fortinet Security Fabric and with third-party tools, as well as identifying ATP deployments and resolving integration-related issues.
Topic 2	<ul style="list-style-type: none">Scanning and rating components: This section focuses on FortiSandbox scanning mechanisms, including scanning components, managing guest virtual machines, and configuring scan options to properly analyze and rate suspicious files.
Topic 3	<ul style="list-style-type: none">Results analysis: This section involves understanding common attack vectors, analyzing malware behavior, and interpreting scan job reports to assess threats and make informed security decisions.
Topic 4	<ul style="list-style-type: none">Deployment and system settings: This domain covers understanding FortiSandbox deployment within different stages of the Cyber Kill Chain, along with configuring system settings, high availability (HA) clusters, and troubleshooting system-related issues.

FCP_FSA_AD-5.0 Exam Pass Guide & FCP_FSA_AD-5.0 Certification Dumps

In this competitive IT industry, having some authentication certificate can help you promote job position. Many companies that take a job promotion or increase salary for you will refer to how many gold content your authentication certificates have. Fortinet FCP_FSA_AD-5.0 is a high gold content certification exam. Fortinet FCP_FSA_AD-5.0 authentication certificate can meet many IT employees' needs. ExamDiscuss can provide you with Fortinet certification FCP_FSA_AD-5.0 exam targeted training. You can free download ExamDiscuss's trial version of raining tools and some exercises and answers about Fortinet certification FCP_FSA_AD-5.0 exam as a try.

Fortinet FCP - FortiSandbox 5.0 Administrator Sample Questions (Q34-Q39):

NEW QUESTION # 34

What are three roles of the rating engine component of FortiSandbox? (Choose three answers)

- A. Analyzes the information from the tracer engine
- B. Generates verdicts
- C. Checks file hashes against FortiGuard
- D. Rates the security effectiveness of third-party devices
- E. Shares verdicts with other Fortinet devices

Answer: A,B,C

Explanation:

From the Scanning and Rating Components lesson, the Study Guide explicitly states:

"The rating engine analyzes the tracer engine's information." - confirms Option E

"FortiSandbox checks connection attempts to any URLs against the FortiGuard web filtering database. FortiSandbox submits hashes of files generated during sandbox analysis to the Sandbox Community Cloud to check for existing verdicts. Additionally, it compares these file hashes against the FortiGuard Cloud-Based Threat Intelligence database." - confirms Option B

"After analysis is complete, the rating engine generates a verdict." - confirms Option D

"Finally, the rating engine generates a report containing all details collected by the tracer engine." Option A is incorrect as the rating engine does not rate third-party device effectiveness. Option C is incorrect - verdict sharing is done by the FortiSandbox system through malware/URL packages, not specifically by the rating engine component.

NEW QUESTION # 35

Which two statements are true about creating an API interface? (Choose two answers)

- A. API ports will not accept HTTP traffic.
- B. Ports configured for HA communication can also be configured as API ports.
- C. The configuration must be performed using the CLI
- D. The interface must also be designated as an administrative interface.

Answer: A,C

Explanation:

From the Lab Guide (Exercise 4 - Using Inline Scanning), the following is stated:

"FortiGate and FortiSandbox communicate through port 4443. Management or API ports grant access through port 4443." And the CLI command used:

"Enter the following command to enable API access on port2: set api-port port2" This confirms:

Option B is correct: Port 4443 uses HTTPS only - API ports will not accept HTTP traffic.

Option C is correct: The API port configuration must be performed using the CLI (set api-port port2), as there is no GUI option for this.

Option A is incorrect: The Study Guide states port3 cannot be a management port, and HA communication ports have dedicated roles that are not interchangeable with API ports.

Option D is incorrect: The CLI command sets the API port directly without requiring a separate administrative interface designation.

NEW QUESTION # 36

A FortiGate root VDOM is authorized on FortiSandbox, and FortiGate is configured to send suspicious files to FortiSandbox for inspection. You create a new VDOM and then generates some traffic so that the new VDOM sends a file to FortiSandbox for the first time. In this scenario, which action will FortiSandbox take? (Choose one answer)

- A. FortiSandbox will authorize the new VDOM by default and inspect files as they are received.
- B. FortiSandbox will inspect all files, based on the root VDOM authorization state and configuration.
- C. FortiSandbox will accept the file, but not inspect the file until the administrator manually authorizes the new VDOM on FortiSandbox.
- D. FortiSandbox will accept the file; but not inspect the file until the administrator manually configures the new VDOM on FortiSandbox.

Answer: C

Explanation:

The uploaded FortiSandbox 5.0 Administrator Study Guide states that each VDOM is handled independently by FortiSandbox, not under the root VDOM's authorization. It explicitly explains that "each VDOM is treated as a separate input device on FortiSandbox" and that each device must be authorized before FortiSandbox will process its submissions. It further adds that only when auto-authorization is enabled will FortiSandbox automatically authorize VDOMs as files are submitted.

Therefore, the new VDOM does not inherit the root VDOM's authorized state. Since the question does not say that auto-authorization is enabled, FortiSandbox will not automatically trust or process that new VDOM as if it were already approved. This eliminates A and C. Option D is incorrect because the issue is not that the administrator must manually configure the VDOM on FortiSandbox; the study guide specifically identifies authorization as the required control. For that reason, B is the best answer: the new VDOM must be manually authorized before its submitted files are inspected.

NEW QUESTION # 37

Refer to the exhibits.

The screenshot shows the 'Scan profile - Pre-Filter' configuration page in FortiSandbox. The page is divided into three main sections, each with a set of radio button options:

- Process the following selected file types:** Executables (checked), PDF (checked), Office (checked), Flash (checked), Web (checked), Archives (checked), Android (unchecked), Mac (unchecked), Linux (unchecked), URL (checked), User Defined Extensions (unchecked).
- Check for Active Content on the selected file types during VM Scan pre-filter:** Office (checked), DLL (unchecked), HTM (unchecked), JS (checked), PDF (checked), SWF (checked), URL (unchecked), Archive (unchecked).
- Use the results of the following during VM Scan pre-filter:** FortiNDR entrust (checked), Trusted Vendor (checked), Trusted Domain (checked).

At the bottom of the page, there is a green 'Apply' button. A large watermark 'examscuss.com' is visible across the center of the image.

You are asked to configure a FortiSandbox to leverage the real-time anti-phishing (RTAP) feature. After configuring the scan profile, testing shows that URLs are not being submitted to the RTAP service. What could cause this issue? (Choose one answer)

- A. The URLs are not designated for active content pre-scan.
- B. The VM scan timeout for URLs should be at least 300 to provide enough time for a FortiGuard response.
- **C. The WEblink file type is not selected in the profile.**
- D. The URL option is not selected as a Web file type.

Answer: C

Explanation:

From the Results Analysis lesson, the Study Guide confirms:

"The Basic information section shows that, in this case, the file type is WEblink and the file was submitted by FortiMail." From the Scanning and Rating Components lesson:

"The only exception to this is URL inputs. These inputs are submitted directly to the VM scan engine for sandboxing." When URLs are submitted to FortiSandbox (from FortiMail or other sources), they are classified as WEblink file type - which is distinct from the standard .url file extension shown in the VM Association Web types (htm, js, lnk, url).

Looking at the exhibits:

The VM Association shows Web: htm, js, lnk, url - but WEblink is NOT listed The Advanced tab shows Real-time Zero-Day Anti-Phishing Service is enabled (green) Despite RTAP being enabled, URLs cannot reach the VM scan stage without WEblink being explicitly included in the scan profile's VM Association Since RTAP operates during VM scanning, if WEblink is not assigned to a VM in the scan profile, URLs submitted for inspection will never reach the VM, and therefore will never be evaluated by the

RTAP service - regardless of RTAP being enabled.

NEW QUESTION # 38

How can you limit an administrator's access to scan jobs on FortiSandbox based on the system that submitted the scan request? (Choose one answer)

- A. By configuring device groups to assign to users
- B. By configuring access in the log server configuration settings
- C. By configuring netshare groups to define access
- **D. By configuring administrator profiles that define job access**

Answer: D

Explanation:

The correct answer is D. The Study Guide states that FortiSandbox has default administrative profiles and specifically says: "The Read Only profile is intended to be used for system-wide monitoring and reporting tasks, whereas the Device profile is intended to be used for monitoring alerts and reporting for a specific device." That wording directly matches the question requirement to limit access based on the system that submitted the scan request. In other words, FortiSandbox uses administrator profiles to control whether an admin can view broad system-wide activity or only jobs and alerts related to a specific submitting device.

This eliminates the other options. The Study Guide does not describe device groups, log server settings, or netshare groups as the mechanism for restricting admin visibility of scan jobs by submitter. Instead, access control is tied to the admin profile model. The Device profile is the exact fit because it narrows monitoring and reporting to a particular device context rather than the entire system. Therefore, the way to limit an administrator's access to scan jobs by the submitting system is by configuring administrator profiles that define job access.

NEW QUESTION # 39

.....

To some extent, to pass the FCP_FSA_AD-5.0 exam means that you can get a good job. The FCP_FSA_AD-5.0 exam materials you master will be applied to your job. The possibility to enter in big and famous companies is also raised because they need outstanding talents to serve for them. Our FCP_FSA_AD-5.0 Test Prep is compiled elaborately and will help the client get the FCP_FSA_AD-5.0 certification. To get a better and full understanding of our FCP_FSA_AD-5.0 quiz torrent, you can just free download the demo of our FCP_FSA_AD-5.0 exam questions.
