

100% Pass Quiz Unparalleled Amazon - AWS-Solutions-Architect-Professional - AWS Certified Solutions Architect - Professional Latest Exam Guide

Amazon (AWS) Certification Details

AWS Certified Solutions Architect Professional (SAP-C01)

Prior Certification Not Required	Exam Validity 3 Years	Exam Fee \$300 USD
Exam Duration 180 minutes	No. of Questions 75	Passing Marks 75-80%
Recommended Experience 2+ years of experience designing & deploying cloud architecture on AWS	Exam Format Multiple Choice & Multiple Select	
Languages English, French, German, Italian, Japanese, Korean, Portuguese, Simplified Chinese, and Spanish		

P.S. Free 2026 Amazon AWS-Solutions-Architect-Professional dumps are available on Google Drive shared by FreeCram <https://drive.google.com/open?id=1cTIx1kkvzRTK20a1mc5PwL2nIj6usxEc>

Our AWS-Solutions-Architect-Professional study materials are different from common study materials, which can motivate you to concentrate on study. Up to now, many people have successfully passed the AWS-Solutions-Architect-Professional exam with our assistance. So you need to be brave enough to have a try. We can guarantee that you will love learning our AWS-Solutions-Architect-Professional Preparation engine as long as you have a try on it. And you can free download the demos of our AWS-Solutions-Architect-Professional learning guide on our website, it is easy, fast and convenient.

To prepare for the AWS-Solutions-Architect-Professional Certification Exam, candidates should have a deep understanding of AWS architecture and design principles. This includes knowledge of AWS services such as Amazon EC2, Amazon S3, Amazon RDS, and Amazon VPC. In addition, candidates should be familiar with AWS security and compliance best practices, as well as AWS cost optimization strategies. To help candidates prepare for the exam, AWS offers a variety of training resources, including online courses, practice exams, and instructor-led training.

What is the duration, language, and format of AWS Solutions Architect Professional Exam

- Language of Exam: English, Japanese, Korean.
- Duration of Exam: 130 minutes
- No negative marking for wrong answers
- Type of Questions: Multiple choice (MCQs), multiple answers

Amazon AWS-Solutions-Architect-Professional Latest Exam Guide: AWS Certified Solutions Architect - Professional - FreeCram Purchasing Safely and Easily

Our PDF version of the AWS-Solutions-Architect-Professional learning braindumps can print on papers and make notes. Then windows software of the AWS-Solutions-Architect-Professional exam questions, which needs to install on windows software. Also, the windows software is intelligent to simulate the real test environment. Then the online engine of the AWS-Solutions-Architect-Professional Study Materials, which is convenient for you because it doesn't need to install on computers. It supports Windows, Mac, Android, iOS and so on. This version just can run on web browser.

Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q206-Q211):

NEW QUESTION # 206

A company is reviewing its AWS Cloud deployment to ensure its data is not accessed by anyone without appropriate authorization. A solutions architect is tasked with identifying all open Amazon S3 buckets and recording any S3 bucket configuration changes. What should the solutions architect do to accomplish this?

- A. Enable AWS Config service with the appropriate rules
- B. Write a script using an AWS SDK to generate a bucket report
- C. Enable AWS Trusted Advisor with the appropriate checks.
- D. Enable Amazon S3 server access logging and configure Amazon CloudWatch Events.

Answer: A

NEW QUESTION # 207

An ecommerce website running on AWS uses an Amazon RDS for MySQL DB instance with General Purpose SSD storage. The developers chose an appropriate instance type based on demand, and configured 100 GB of storage with a sufficient amount of free space.

The website was running smoothly for a few weeks until a marketing campaign launched. On the second day of the campaign, users reported long wait times and time outs. Amazon CloudWatch metrics indicated that both reads and writes to the DB instance were experiencing long response times. The CloudWatch metrics show 40% to 50% CPU and memory utilization, and sufficient free storage space is still available. The application server logs show no evidence of database connectivity issues. What could be the root cause of the issue with the marketing campaign?

- A. It exhausted the I/O credit balance due to provisioning low disk storage during the setup phase
- B. It exhausted the maximum number of allowed connections to the database instance
- C. It exhausted the network bandwidth available to the RDS for MySQL DB instance
- D. It caused the data in the tables to change frequently, requiring indexes to be rebuilt to optimize queries

Answer: A

NEW QUESTION # 208

A company is using a single AWS Region (or its ecommerce website). The website includes a web application that runs on several Amazon EC2 instances behind an Application Load Balancer (ALB). The website also includes an Amazon DynamoDB table. A custom domain name in Amazon Route 53 is linked to the ALB.

The company created an SSL/TLS certificate in AWS Certificate Manager (ACM) and attached the certificate to the ALB. The company is not using a content delivery network as part of its design.

The company wants to replicate its entire application stack in a second Region to provide disaster recovery, plan for future growth, and provide improved access time to users. A solutions architect needs to implement a solution that achieves these goals and minimizes administrative overhead.

Which combination of steps should the solutions architect take to meet these requirements? (Select THREE.)

- A. Update the Route 53 hosted zone record for the application to use latency-based routing. Send traffic to the ALB in each Region.
- B. Use the AWS Management Console to document the existing infrastructure design in the first Region and to create the new infrastructure in the second Region.
- C. Create a new DynamoDB table. Enable DynamoDB Streams for the new table. Add the second Region to create a global table. Copy the data from the existing DynamoDB table to the new table as a one-time operation.
- D. Update the Route 53 hosted zone record for the application to use weighted routing. Send 50% of the traffic to the ALB in each Region.
- E. Create an AWS CloudFormation template for the current infrastructure design. Use parameters for important system values, including Region. Use the CloudFormation template to create the new infrastructure in the second Region.
- F. Update the configuration of the existing DynamoDB table by enabling DynamoDB Streams. Add the second Region to create a global table.

Answer: A,C,E

NEW QUESTION # 209

A company that has multiple AWS accounts is using AWS Organizations. The company's AWS accounts host VPCs, Amazon EC2

instances, and containers.

The company's compliance team has deployed a security tool in each VPC where the company has deployments. The security tools run on EC2 instances and send information to the AWS account that is dedicated for the compliance team. The company has tagged all the compliance-related resources with a key of "costCenter" and a value of "compliance".

The company wants to identify the cost of the security tools that are running on the EC2 instances so that the company can charge the compliance team's AWS account. The cost calculation must be as accurate as possible.

What should a solutions architect do to meet these requirements?

- A. In the member accounts of the organization activate the costCenter user-defined tag. From the management account, schedule a monthly AWS Cost and Usage Report. Use the tag breakdown in the report to calculate the total cost for the costCenter tagged resources.
- B. Create a custom report in the organization view in AWS Trusted Advisor. Configure the report to generate a monthly billing summary for the costCenter tagged resources in the compliance team's AWS account.
- C. In the member accounts of the organization, activate the costCenter user-defined tag. Configure monthly AWS Cost and Usage Reports to save to an Amazon S3 bucket in the management account. Schedule a monthly AWS Lambda function to retrieve the reports and calculate the total cost for the costCenter tagged resources.
- **D. In the management account of the organization, activate the costCenter user-defined tag. Configure monthly AWS Cost and Usage Reports to save to an Amazon S3 bucket in the management account. Use the tag breakdown in the report to obtain the total cost for the costCenter tagged resources.**

Answer: D

NEW QUESTION # 210

A company requires that all internal application connectivity use private IP addresses. To facilitate this policy, a solutions architect has created interface endpoints to connect to AWS public services. Upon testing, the solutions architect notices that the service names are resolving to public IP addresses, and that internal services cannot connect to the interface endpoints.

Which step should the solutions architect take to resolve this issue?

- **A. Enable the private DNS option on the VPC attributes.**
- B. Configure the security group on the interface endpoint to allow connectivity to the AWS services.
- C. Configure an Amazon Route 53 private hosted zone with a conditional forwarder for the internal application.
- D. Update the subnet route table with a route to the interface endpoint.

Answer: A

NEW QUESTION # 211

.....

One of the best ways to prepare for the Amazon AWS-Solutions-Architect-Professional exam is to study the AWS Certified Solutions Architect - Professional (AWS-Solutions-Architect-Professional) exam questions. Familiarizing yourself with the AWS-Solutions-Architect-Professional certification using practice test on real-world data sets can help you build your confidence and prepare you for the exam. Additionally, taking AWS-Solutions-Architect-Professional Exam Questions and quizzes can help you identify areas where you need to improve and gauge your understanding of the material.
