

# AZ-104 Exam Test, Test AZ-104 Pattern

---

## AZ-104 Exam Study Guide | Latest Version 2024 | Expert Verified | Ace the Test

Azure Policy ✓✓ Azure Policy is an Azure service you use to create, assign and manage policies. These policies enforce different rules and effects over your resources so that those resources stay compliant with your corporate standards and service level agreements. Azure Policy meets this need by evaluating your resources for noncompliance with assigned policies. For example, you might have a policy that allows virtual machines of only a certain size in your environment. After this policy is implemented, new and existing resources are evaluated for compliance. With the right type of policy, existing resources can be brought into compliance.

What is a policy definition? ✓✓ A policy definition expresses what to evaluate and what action to take. For example, you could ensure all public websites are secured with HTTPS, prevent a particular storage type from being created, or force a specific version of SQL Server to be used.

Removing a policy definition ✓✓ `Remove-AzPolicyAssignment -Name 'audit-vm-manageddisks' -Scope`

Defining initiatives ✓✓ Initiative definitions simplify the process of managing and assigning policy definitions by grouping a set of policies into a single item. For example, you could create

In the process of using the AZ-104 study training materials, once users have any questions about our study materials, the user can directly by E-mail us, our products have a dedicated customer service staff to answer for the user, they are 24 hours service for you, we are very welcome to contact us by E-mail and put forward valuable opinion for us. Our AZ-104 Latest Questions already have three different kinds of learning materials, what is the most suitable AZ-104 test guide for you? You can just follow the instructions for AZ-104 study guide on the web or ask our services about it.

There are thousands of customers have passed their exam successfully and get the related certification. After that, all of their Microsoft Azure Administrator exam torrents were purchase on our website. In addition to the industry trends, the AZ-104 Test Guide is written by lots of past materials' rigorous analyses. The language of our study materials are easy to be understood, only with strict study, we write the latest and the specialized study materials. We want to provide you with the best service and hope you can be satisfied.

## Test AZ-104 Pattern, VCE AZ-104 Dumps

Of course, when we review a qualifying exam, we can't be closed-door. We should pay attention to the new policies and information related to the test AZ-104 certification. For the convenience of the users, the AZ-104 test materials will be updated on the

homepage and timely update the information related to the qualification examination. Annual qualification examination, although content broadly may be the same, but as the policy of each year, the corresponding examination pattern grading standards and hot spots will be changed, the AZ-104 Test Prep can help users to spend the least time to pass the exam.

Microsoft AZ-104 Exam is part of the Microsoft Certified: Azure Administrator Associate certification path. Earning this certification validates the candidate's expertise in managing and administering Microsoft Azure services and demonstrates their ability to implement and manage Azure resources according to best practices. Microsoft Azure Administrator certification is in high demand and can lead to various job opportunities in the field of cloud computing.

## **Microsoft Azure Administrator Sample Questions (Q418-Q423):**

### **NEW QUESTION # 418**

You plan to deploy an Azure container instance by using the following Azure Resource Manager template.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the template.

#### **Answer:**

Explanation:

Box 1: can connect to the container from any device

In the policy "osType": "window" refer that it will create a container in a container group that runs Windows but it won't block access depending on device type.

Box 2: the container will restart automatically

Docker provides restart policies to control whether your containers start automatically when they exit, or when Docker restarts. Restart policies ensure that linked containers are started in the correct order. Docker recommends that you use restart policies, and avoid using process managers to start containers.

on-failure : Restart the container if it exits due to an error, which manifests as a non-zero exit code.

As the flag is mentioned as "on-failure" in the policy, so it will restart automatically

Reference:

<https://docs.microsoft.com/en-us/cli/azure/container?view=azure-cli-latest>

<https://docs.docker.com/config/containers/start-containers-automatically/>

### **NEW QUESTION # 419**

You have a sync group that has the endpoints shown in the following table.

Cloud tiering is enabled for Endpoint3.

You add a file named File1 to Endpoint1 and a file named File2 to Endpoint2.

You need to identify on which endpoints File1 and File2 will be available within 24 hours of adding the files.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

#### **Answer:**

Explanation:

File1: Endpoint3 only

Cloud Tiering: A switch to enable or disable cloud tiering. When enabled, cloud tiering will tier files to your Azure file shares. This converts on-premises file shares into a cache, rather than a complete copy of the dataset, to help you manage space efficiency on your server. With cloud tiering, infrequently used or accessed files can be tiered to Azure Files.

File2: Endpoint1, Endpoint2, and Endpoint3

### **NEW QUESTION # 420**

You have two Azure virtual networks named VNet1 and VNet2. VNet1 contains an Azure virtual machine named VM1. VNet2 contains an Azure virtual machine named VM2.

VM1 hosts a frontend application that connects to VM2 to retrieve data.

Users report that the frontend application is slower than usual.

You need to view the average round-trip time (RTT) of the packets from VM1 to VM2.

Which Azure Network Watcher feature should you use?

- A. Connection monitor
- B. NSG flow logs
- C. IP flow verify
- D. Connection troubleshoot

**Answer: A**

Explanation:

Section: [none]

Explanation:

The connection monitor capability monitors communication at a regular interval and informs you of reachability, latency, and network topology changes between the VM and the endpoint

Incorrect Answers:  
A: The IP flow verify capability enables you to specify a source and destination IPv4 address, port, protocol (TCP or UDP), and traffic direction (inbound or outbound). IP flow verify then tests the communication and informs you if the connection succeeds or fails. If the connection fails, IP flow verify tells you which security rule allowed or denied the communication, so that you can resolve the problem.

B: The connection troubleshoot capability enables you to test a connection between a VM and another VM, an FQDN, a URI, or an IPv4 address. The test returns similar information returned when using the connection monitor capability, but tests the connection at a point in time, rather than monitoring it over time, as connection monitor does.

D: The NSG flow log capability allows you to log the source and destination IP address, port, protocol, and whether traffic was allowed or denied by an NSG.

## NEW QUESTION # 421

You have an Azure web app named WebApp1.

You need to provide developers with a copy of WebApp1 that they can modify without affecting the production WebApp1. When the developers finish testing their changes, you must be able to switch the current live version of WebApp1 to the new version.

Which command should you run to prepare the environment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation

Box 1: `New-AzureRmWebAppSlot`

The `New-AzureRmWebAppSlot` cmdlet creates an Azure Web App Slot in a given a resource group that uses the specified App Service plan and data center.

Box 2: `-SourceWebApp`

<https://docs.microsoft.com/en-us/powershell/module/azurerm.websites/new-azurermwebappslot>

## NEW QUESTION # 422

You have an Azure Storage account named storage1 that uses Azure Blob storage and Azure File storage.

You need to use AzCopy to copy data to the blob storage and file storage in storage1.

Which authentication method should you use for each type of storage? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/storage/common/storage-use-azcopy-v10>

## NEW QUESTION # 423

AZ-104 test questions have so many advantages that basically meet all the requirements of the user. If you have good comments or suggestions during the trial period, you can also give us feedback in a timely manner. Our study materials will give you a benefit as Thanks, we do it all for the benefits of the user. AZ-104 study materials look forward to your joining in. We have full confidence to ensure that you will have an enjoyable study experience with our AZ-104 Certification guide, which are designed to arouse your interest and help you pass the exam more easily. You will have a better understanding after reading the following advantages.
