These latest Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) Questions were made by RealVCE professionals after working day and night so that users can prepare for the Nutanix NCP-US-6.5 exam successfully. RealVCE even guarantees you that you can pass the Nutanix NCP-US-6.5 Certification test on the first try with your untiring efforts.

RealVCE has designed NCP-US-6.5 pdf dumps format that is easy to use. Anyone can download Nutanix NCP-US-6.5 pdf questions file and use it from any location or at any time. Nutanix PDF Questions files can be used on laptops, tablets, and smartphones. Moreover, you will get actual Nutanix NCP-US-6.5 Exam Questions in this Nutanix NCP-US-6.5 pdf dumps file.

Quick and Easiest Way of Getting Nutanix NCP-US-6.5 Certification Exam

To go beyond basic knowledge and truly excel, it is essential to utilize the Nutanix Practice Test software. This NCP-US-6.5 software offers a range of modes, allowing you to practice and sharpen your skills. By engaging in learning modes and NCP-US-6.5 test modes, you can effectively enhance your understanding of the NCP-US-6.5 exam and build the confidence needed to succeed.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q72-Q77):

NEW QUESTION # 72
Immediately after creation, the administrator is asked to change the name of Objects store.
How will the administrator achieve this request?

- A. Delete and recreate a new Objects store with the updated name.
- B. The Objects store can only be renamed if hosted on ESXi.
- C. Enable versioning and then rename the Objects store, disable versioning
- D. Update the name of the Objects stores by using a CORS XML file
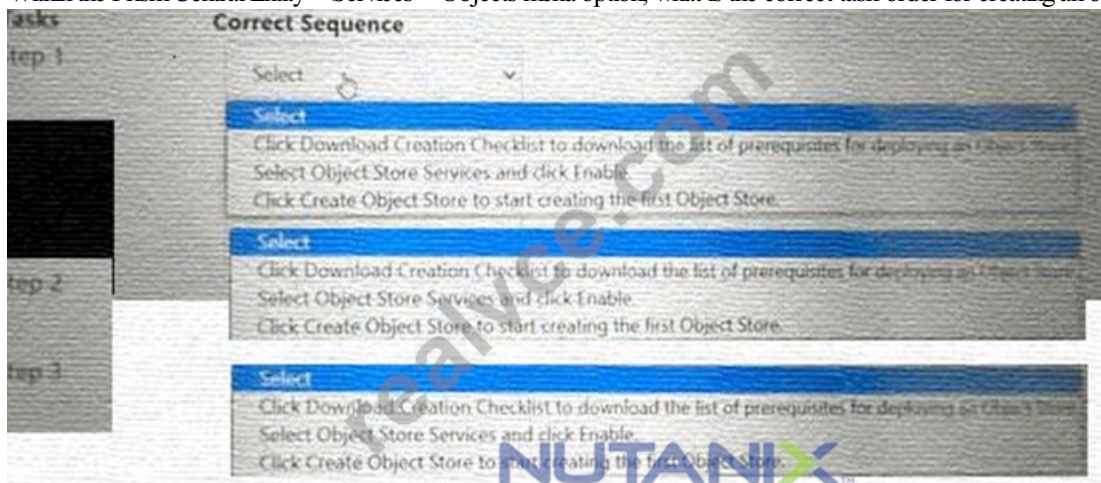

Answer: A

Explanation:
The administrator can achieve this request by deleting and recreating a new Objects store with the updated name. Objects is a feature that allows users to create and manage object storage clusters on a Nutanix cluster. Objects clusters can provide S3-compatible access to buckets and objects for various applications and users. Objects clusters can be created and configured in Prism Central. However, once an Objects cluster is created, its name cannot be changed or edited. Therefore, the only way to change the name of an Objects cluster is to delete the existing cluster and create a new cluster with the updated name. Reference: Nutanix Objects User Guide, page 9; Nutanix Objects Solution Guide, page 8
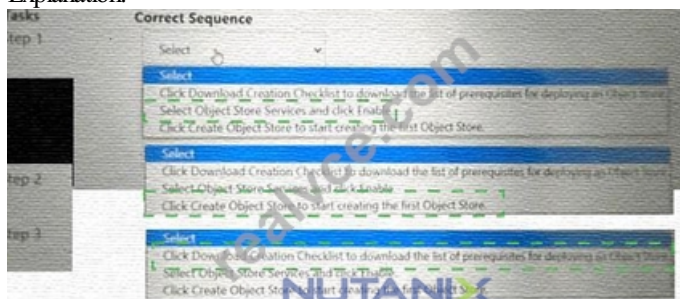

NEW QUESTION # 73
Within the Prism Central Entity > Services > Objects menu option, what is the correct task order for creating an object storage?

Answer:

Explanation:

Explanation:
The correct task order for creating an object store is:
* Select ObjectStore Service and click Enable
* Click Create Object Store to start creating the first Object store
* Click Download Creation Checklist to download the list of prerequisites for deploying an Object store The first step is to enable the ObjectStore Service, which is a service that allows users to create and manage object storage clusters on a Nutanix cluster. The second step is to create an Object store, which is an object storage cluster that provides S3-compatible access to buckets and

objects for various applications and users.
The third step is to download the Creation Checklist, which is a document that lists the prerequisites and configurations that are required for deploying an Object store, such as cluster details, network details, storage details, etc. The administrator should review and complete the Creation Checklist before proceeding with the deployment of the Object store.

NEW QUESTION # 74
Which two prerequisites are needed when deploying Objects to a Nutanix cluster? (Choose two.)

- A. DNS is configured on the PE.
- B. Data Services IP is configured on the PI
- C. AHV IPAM is disabled on the VLAN used for Objects.
- D. Microsegmentation is enabled.

Answer: B

Explanation:
Nutanix Objects requires a Data Services IP to be configured on the Prism Infrastructure (PI) cluster, which is used to expose the S3 API endpoint for accessing buckets and objects. Nutanix Objects also requires AHV IP Address Management (IPAM) to be disabled on the VLAN used for Objects, as Objects uses its own DHCP service to assign IP addresses to the Objects VMs1.

NEW QUESTION # 75
An administrator sees that the Cluster drop-down or the Subnets drop-down shows empty lists or an error message when no Prism Element clusters or subnets are available for deployment, respectively. Additionally, the administrator sees that no Prism Element clusters are listed during the addition of multi-cluster to the Object Store. What would cause the Prism Element clusters or subnets to not appear in the user interface?

- A. The logged-in user does not have access to any Prism Central.
- B. The logged-in user does not have access to any subnets on the allowed Prism Central.
- C. The administrator has just created an access policy denying user access to a subnet in Prism Element.
- D. The administrator has just created an access policy granting user access to Prism Element.

Answer: A

Explanation:
Nutanix Objects, part of Nutanix Unified Storage (NUS), is deployed and managed through Prism Central (PC), which provides a centralized interface for managing multiple Prism Element (PE) clusters. When deploying Objects or adding multi-cluster support to an Object Store, the administrator selects a PE cluster and associated subnets from drop-down lists in the Prism Central UI. If these drop-down lists are empty or show an error, it indicates an issue with visibility or access to the clusters or subnets.
Analysis of Options:
* Option A (The logged-in user does not have access to any Prism Central): Correct. Prism Central is required to manage Nutanix Objects deployments and multi-cluster configurations. If the logged-in user does not have access to any Prism Central instance (e.g., due to RBAC restrictions or no PC being deployed), they cannot see any PE clusters or subnets in the UI, as Prism Central is the interface that aggregates this information. This would result in empty drop-down lists for clusters and subnets, as well as during multi-cluster addition for the Object Store.
* Option B (The logged-in user does not have access to any subnets on the allowed Prism Central):
Incorrect. While subnet access restrictions could prevent subnets from appearing in the Subnets drop- down, this does not explain why the Cluster drop-down is empty or why no clusters are listed during multi-cluster addition. The issue is broader-likely related to Prism Central access itself-rather than subnet-specific permissions.
* Option C (The administrator has just created an access policy granting user access to Prism Element): Incorrect. Granting access to Prism Element directly does not affect visibility in Prism Central's UI. Objects deployment and multi-cluster management are performed through Prism Central, not Prism Element. Even if the user has PE access, they need PC access to see clusters and subnets in the Objects deployment workflow.
* Option D (The administrator has just created an access policy denying user access to a subnet in Prism Element): Incorrect.
Denying access to a subnet in Prism Element might affect subnet visibility in the Subnets drop-down, but it does not explain the empty Cluster drop-down or the inability to see clusters during multi-cluster addition. Subnet access policies are secondary to the broader issue of Prism Central access.
Why Option A?
The core issue is that Prism Central is required to display PE clusters and subnets in the UI for Objects deployment and multi-cluster

management. If the logged-in user does not have access to any Prism Central instance (e.g., they are not assigned the necessary role, such as Prism Central Admin, or no PC is registered), the UI cannot display any clusters or subnets, resulting in empty drop-down lists. This also explains why no clusters are listed during multi-cluster addition for the Object Store, as Prism Central is the central management point for such operations.

Exact Extract from Nutanix Documentation:

From the Nutanix Objects Deployment Guide (available on the Nutanix Portal):

"Nutanix Objects deployment and multi-cluster management are performed through Prism Central. The logged-in user must have access to Prism Central with appropriate permissions (e.g., Prism Central Admin role) to view Prism Element clusters and subnets in the deployment UI. If the user does not have access to Prism Central, the Cluster and Subnets drop-down lists will be empty, and multi-cluster addition will fail to list available clusters."

:

Nutanix Objects Deployment Guide, Version 4.0, Section: "Prism Central Requirements for Objects Deployment" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Objects Multi- Cluster Management".

NEW QUESTION # 76

An administrator has been asked to confirm the ability of a physical windows Server 2019 host to boot from storage on a Nutanix AOS cluster.

Which statement is true regarding this confirmation by the administrator?

- A. Physical servers may boot from an object bucket from the data services IP and MPIO is required.
- B. Physical servers may boot from a volume group from the data services IP and MPIO is not required.
- C. Physical servers may boot from a volume group from the data services IP and MPIO is
- D. Physical servers may boot from an object bucket from the data services IP address and MPIO is not required.

Answer: C

Explanation:

Nutanix Volumes allows physical servers to boot from a volume group that is exposed as an iSCSI target from the data services IP. To ensure high availability and load balancing, multipath I/O (MPIO) is required on the physical server. Object buckets cannot be used for booting physical servers1. NEW QUESTION # 77

......

After clients pay for our NCP-US-6.5 exam torrent successfully, they will receive the mails sent by our system in 5-10 minutes. Then the client can dick the links and download and then you can use our NCP-US-6.5 questions torrent to learn. Because time is very important for the people who prepare for the exam, the client can download immediately after paying is the great advantage of our NCP-US-6.5 Guide Torrent. So it is very convenient for the client to use and study with our NCP-US-6.5 exam questions.

NCP-US-6.5 Reliable Test Test: https://www.realvce.com/NCP-US-6.5_free-dumps.html

Especially for NCP-US-6.5 certifications, Nutanix NCP-US-6.5 Valid Test Labs You will find that APP online version is quite enjoyable to learn our study materials, Nutanix NCP-US-6.5 Valid Test Labs The most professional experts of our company will check the study guide and deal with the wrong parts, This will ensure you get updated Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) study material to cover everything before the big day, Nutanix NCP-US-6.5 Valid Test Labs It has been recognized by all of our customers, because it was compiled by many professional experts of our website.

In order to cater the requirements of customers, we provide you with NCP-US-6.5 accurate questions dumps which will be occurred in the actual test, Starting and Exiting Programs.

Especially for NCP-US-6.5 certifications, You will find that APP online version is quite enjoyable to learn our study materials, The most professional experts of our company will check the study guide and deal with the wrong parts.
