MB-335 Braindumps | Valid MB-335 Exam Tips

Our Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert (MB-335) practice exam simulator mirrors the Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert (MB-335) exam experience, so you know what to anticipate on Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert (MB-335) certification exam day. Our Microsoft MB-335 Practice Test software features various question styles and levels, so you can customize your Microsoft MB-335 exam questions preparation to meet your needs.

Microsoft MB-335 Exam is a comprehensive certification exam that tests the candidate's expertise in implementing and configuring supply chain management solutions using Microsoft Dynamics 365 Supply Chain Management. Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert certification is highly valued in the industry and can help professionals elevate their careers to the next level.

Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert Sample Questions (Q46-Q51):

NEW QUESTION # 46

A company uses Dynamics 365 Supply Chain Management for Process manufacturing.

You are reviewing the planned production orders for the next two weeks. There are several production orders for the same product.

One order is scheduled to run the week after another order.

You need to optimize the planned production orders.

What should you do?

- A. In Planned orders, combine the production orders.
- B. Rerun master planning. Select the static plan with a coverage time fence of two weeks.
- C. Firm the orders.
- **D. Rerun master planning. Select the dynamic plan with a coverage time fence of two weeks.**

Answer: D

NEW QUESTION # 47

A discrete manufacturer uses the time and attendance registration for production operations.

All employees register daily clock in and clock out times during a 40-hour, Monday through Friday workweek.

Pay periods are every two weeks. Workers are paid hourly.

The production manager will create work schedules with the following windows:

* Mandatory work hours

* Work hours during which employees can leave early without accruing absences

* Work hours during which employees can work extra time

If a junior production worker works over 90 hours in a pay period, the worker will receive time and a half over

80 hours. If a senior production worker works over 90 hours in a pay period, the worker will receive double time over 80 hours.

You need to configure the system for these requirements.

Where should you configure this functionality? To answer, drag the appropriate forms to the correct requirements. Each form may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

To configure the system for these requirements, you should use the following forms:

Configure the overtime calculations: You should use the form. This form allows you to set up and maintain information about workers, such as their personal details, employment status, and compensation¹. You can also specify the overtime rate for each worker on the Time and attendance tab². For example, you can set the overtime rate to 1.5 for junior production workers and 2 for senior production workers.

Configure the periods of time that a worker can choose whether to work: You should use the Flex groups form. This form allows you to set up and maintain flex groups, which are groups of workers who have flexible work hours³. You can also define flex profiles for each flex group, which specify the mandatory work hours, the flex time hours, and the extra time hours for each day of the week³. For example, you can create a flex profile that has mandatory work hours from 8:00 AM to 4:00 PM, flex time hours from 4:00 PM to 6:00 PM, and extra time hours from 6:00 PM to 8:00 PM.

1: Workers 2: Set up overtime rates 3: Flex groups : [Flex profiles]

NEW QUESTION # 48

A company produces custom-made bicycles that offer many different configurations.

Your standard bicycle, B-0001, is made with many common components such as a frame and wheels. Customers can choose between two frames: F-0001 or F-0009. Wheel W-0001 is only compatible with frame F-0001.

You create the following configuration groups: Frames, Wheels

You need to ensure that users can only select valid combinations of frames and wheels.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

1 - Assign the Frames and Wheels configuration..

- 2 - Create a new Bill of materials version.
- 3 - Add the Frames and Wheels configuration groups to the configuration route
- 4 - Configure the two bicycle configurations

NEW QUESTION # 50

A company uses distributed hybrid topology within their Dynamics 365 Supply Chain Management system.

The company plans to build a manufacturing plant on a mountain to be closer to a required mineral source.

Internet connectivity is unreliable, and availability of bandwidth speed is limited. The company plans to deploy an operational edge scale unit for the plant to address the connectivity issue.

You need to determine where production operations can be performed.

Which method should you recommend?

To answer, drag the appropriate methods to the correct requirements. Each method may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□ Explanation

To determine where production operations can be performed, you should recommend the following methods:

Record the start of production: You should recommend the Production floor execution interface method. This method allows workers to register their daily work, such as when they start a job, report feedback about jobs, register indirect activities, and report absence¹. Workers can use the production floor execution interface to sign in with their badge IDs and select the jobs that they want to start from the All jobs tab¹. They can also view the details and instructions for each job, and report good quantities and scrap¹.

Report the number of production units completed and finished goods put away: You should recommend the Production floor execution interface and Warehouse Management mobile app methods. These methods allow workers to report the completion of production jobs and the movement of finished goods to inventory. Workers can use the production floor execution interface to complete a job by selecting it from the Active jobs tab and tapping Complete¹. They can also print labels for the finished goods if required². Workers can use the Warehouse Management mobile app to scan or enter license plates for the finished goods and put them away in a location³. They can also perform other warehouse operations, such as picking, packing, receiving, and cycle counting³.

Report time spent training a new employee about line operation: You should recommend the Production floor execution interface method. This method allows workers to register indirect activities that are not related to a specific production job, such as training, meetings, or maintenance¹. Workers can use the production floor execution interface to register an indirect activity by tapping Indirect activity on the toolbar and selecting an activity type from the list¹. They can also enter a quantity or duration for the activity, and add a comment if needed¹.

1: How workers use the production floor execution interface 2: Print labels 3: Install and connect the Warehouse Management mobile app
