C-CPI-2506 Exam Tutorial & C-CPI-2506 VCE Dumps

You can download our C-CPI-2506 guide torrent immediately after you pay successfully. After you pay successfully you will receive the mails sent by our system in 10-15 minutes. Then you can click on the links and log in and you will use our software to learn our C-CPI-2506 prep torrent immediately. Not only our C-CPI-2506 Test Prep provide the best learning for them but also the purchase is convenient because the learners can immediately learn our C-CPI-2506 prep torrent after the purchase. So the using and the purchase are very fast and convenient for the learners

SAP Certified Associate - Integration Developer Sample Questions (Q11-

Q16):

NEW QUESTION # 11

Where must you configure an HTTPS inbound adapter with OAuth 2.0 authentication?

- A. In the adapter
- B. In the process runtime
- C. In the SAP Integration Suite
- D. In the integration flow

Answer: D

Explanation:

An HTTPS inbound adapter is an adapter that allows an integration flow to receive messages from external systems using the HTTPS protocol. OAuth 2.0 authentication is a method of authentication that allows clients to access protected resources on behalf of a resource owner by obtaining an access token from an authorization server. To configure an HTTPS inbound adapter with OAuth 2.0 authentication, you must do it in the integration flow where you define the adapter settings. You can choose OAuth 2.0 as the authentication type and specify the required parameters, such as client ID, client secret, token URL, scope, and so on. You can also configure additional security options, such as SSL certificate, CSRF protection, and CORS policy. Reference: Using Adapter Inbound Security - SAP Learning, Set Up Inbound OAuth Client Credentials Grant Authentication for Senders Calling Integration Flows with SAP-Generated Certificate | SAP Tutorials

NEW QUESTION # 12

From which of the following can you create an API proxy directly? Note: There are 2 correct answers to this question.

- A. API provider
- B. S/4HANA API
- C. Source URL
- D. Open Connectors

Answer: A,C

Explanation:

In SAP API Management (part of Integration Suite), an API Proxy acts as a facade for a backend service. You can create an API proxy directly from:

API Provider # An API provider represents the backend system (e.g., SAP S/4HANA, SAP Gateway, third- party services).

Proxies can be generated from these providers.

Source URL # You can directly specify the backend system's endpoint URL, and an API proxy will be generated from it.

Other options:

Open Connectors # Provides harmonized APIs to third-party apps (e.g., Salesforce, HubSpot), but you don't create proxies directly from them.

S/4HANA API # While S/4HANA APIs can be exposed, they are typically accessed via an API Provider or URL, not directly listed as a creation source.

NEW QUESTION # 13

What are some aspects of "holistic integration" of the SAP Integration Suite? Note: 3 answers are correct.

- A. Process Integration
- B. Data Integration
- C. Cloud Integration
- D. Event Integration
- E. Domain Integration

Answer: A,B,D

Explanation:

Some aspects of "holistic integration" of the SAP Integration Suite are process integration, event integration, and data integration.

Process integration refers to the orchestration and automation of business processes across different systems and applications. Event integration refers to the communication and coordination of events between different sources and consumers. Data integration refers

to the extraction, transformation, and loading of data between different sources and targets. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 14

To activate the Event Mesh (EMIS) capability in the SAP Integration Suite, which role collections must be assigned to the user performing the activation?

- A. **Integration_Provisioner** and **Subaccount Administrator**
- B. **API_Manager** and **Monitoring-Viewer**
- C. **Integration_Administrator** and **Security_Auditor**
- D. **Process_Orchestrator** and **Subaccount_Visitor**

Answer: A

Explanation:

To activate Event Mesh (EMIS) capability in SAP Integration Suite, the required role collections are:

Integration_Provisioner # Allows provisioning of new capabilities (including Event Mesh) in Integration Suite.

Subaccount Administrator # Grants permission to manage and configure subaccount-level entitlements and service activations.

Other options:

Integration_Administrator, API_Manager, Monitoring_Viewer # Used for operational tasks, not provisioning.

Process_Orchestrator # Refers to on-premise PI/PO, not BTP roles.

Security_Auditor # Auditing role, not activation.

Thus, the correct roles are Integration_Provisioner and Subaccount Administrator.

NEW QUESTION # 15

Using the Test Connectivity function, you want to test a connection to a backend system. The connection is provided by a Cloud Connector. Which parameter is required for the connection test?

- A. Subaccount ID
- **B. Location ID**
- C. Connector ID
- D. Host

Answer: B

Explanation:

To test a connection to a backend system that is provided by a Cloud Connector, you must specify the location ID as a parameter for the connection test. The location ID is a unique identifier that represents a Cloud Connector instance in a specific network location. It is used to route requests from SAP Integration Suite to the correct Cloud Connector instance and then to the backend system. You can find the location ID in the Cloud Connector administration UI under Configuration Location ID. Reference: Cloud Connector Connectivity Tests | SAP Help Portal, Cloud Connector Configuration | SAP Help Portal

NEW QUESTION # 16

.....

The field of SAP is growing rapidly and you need the SAP C-CPI-2506 certification to advance your career in it.
