Certification NCP-MCA Test Questions, Learning NCP-MCA Mode

Our company is a multinational company with sales and after-sale service of NCP-MCA exam torrent compiling departments throughout the world. In addition, our company has become the top-notch one in the fields, therefore, if you are preparing for the exam in order to get the related NCP-MCA certification, then the NCP-MCA Exam Question compiled by our company is your solid choice. All employees worldwide in our company operate under a common mission: to be the best global supplier of electronic NCP-MCA exam torrent for our customers to pass the NCP-MCA exam.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q39-Q44):

NEW QUESTION # 39

What does the Playbook Alert Trigger do?

- A. Generates a Playbook alert at a specified time interval
- B. Alerts the administrator if a Playbook is triggered
- C. Inform the administrator if an instance of a Playbook has failed
- D. Selects an alert which, if generated, will start the Playbook

Answer: D

Explanation:

Comprehensive and Detailed Explanation

Nutanix Playbooks can start based on an Alert Trigger, which is defined as:

* A specific Prism Central alert that, when generated, automatically starts the Playbook.

* Alert Triggers map directly to an alert definition that Calm will monitor.

Thus, the Alert Trigger does not generate alerts or notify admins by itself—it waits for a selected alert and launches the Playbook when that alert fires.

Correct answer: D

NEW QUESTION # 40

An administrator manages a Nutanix cluster with 630 VMs, all of which are in production.

The Accounting department wants to be notified when any of their production VMs exceed 90% CPU usage or 90% memory usage. Their VMs are categorized as LOB:Accounting.

How should the administrator satisfy this request from the Accounting department?

- A. Create a dashboard in Prism Central with the CPU Usage.
- B. Direct the VM users to generate alerts within the affected VMs.
- C. Create a category named Department with the value Accounting.
- **D. Create an Alert with the Accounting category assigned.**

Answer: D

Explanation:

Alerts are a way of monitoring the health and performance of the Nutanix cluster and the VMs running on it. Alerts can be triggered by various metrics, such as CPU usage, memory usage, disk space, network traffic, etc. Alerts can also be configured to send notifications to the administrator or other recipients via email, Slack, PagerDuty, etc. To satisfy the request from the Accounting department, the administrator should create an Alert with the following settings:

Trigger: CPU Usage (%) > 90 OR Memory Usage (%) > 90

Scope: VM

Category: LOB:Accounting

Notification: Email to accounting@company.com This way, the Alert will only apply to the VMs that belong to the Accounting department, and will send an email notification to the Accounting department when any of their VMs exceed the specified thresholds.

NEW QUESTION # 41

What are the two types of Blueprints?

- A. Cloud Native VM and OnPrem VM
- B. PaaS VM and SaaS VM
- C. Containerized VM and serverless VM
- **D. Single VM and Multi VM**

Answer: D

Explanation:

In Nutanix Calm, there are two types of blueprints: Single VM and Multi VM. Single VM blueprints are used to define and manage the deployment of individual virtual machines, while Multi VM blueprints are used to manage the deployment of applications that span multiple VMs with defined dependencies and configurations.
