#### NEW QUESTION # 21

Can you use Queues in the Document Understanding Process?

- **A. The Document Understanding Process can use Queues but the Auto Retry Functionality should be disabled.**
- B. The Document Understanding Process can't use Queues because items waiting for Human Validation for more than 24h will be marked as Abandoned.
- C. The Document Understanding Process can use Queues but the Auto Retry Functionality should be enabled.
- D. The Document Understanding Process can't use Queues because items waiting for Human Validation for more than 10 days will be marked as Abandoned.

**Answer: A**

Explanation:

The Document Understanding Process is a fully functional UiPath Studio project template based on a document processing flowchart. It supports both attended and unattended robots with human-in-the-loop validation via Action Center. The process uses queues to store and process the input files, one file per queue item. However, the Auto Retry Functionality should be disabled on queues, because it can interfere with the human validation step and cause errors or duplicates. The process handles the retry mechanisms internally, using the Try/Catch and Error management features.
