CLO-002 PDF version is printable, and if you prefer a hard one, you can choose this version. CLO-002 Soft test engine supports MS operating system, and it can install in more than 200 computers. CLO-002 Online Test engine is convenient and easy to learn, you can have offline practice if you want. CLO-002 Online soft test engine

supports all web browsers and it has testing history and performance review, and you can have a general review of what you have learnt before next learning.

CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q69-Q74):

NEW QUESTION # 69

Which of the following is the key differentiator between a SaaS and a PaaS cloud delivery model?

- A. SaaS only provides access to applications, while PaaS enables developers to test and debug the application.
- **B. SaaS implements abstraction at the software level, while PaaS implements virtualization of the underlying hardware platform.**
- C. PaaS mostly tailors to private industries, while SaaS offers services to the private and public sector, as well as individuals.
- D. PaaS implements a chargeback model to maximize return on investment, while SaaS uses direct cost allocation when invoicing customers.

Answer: B

NEW QUESTION # 70

A business is experiencing an outage of a customer-facing e-commerce website after a SaaS-based CDN upgrade. The RTO is 5 minutes or less, but it has already been 10 minutes since the outage. After 15 minutes, the CDN recovers for the outage. The business loses \$25000 in revenue per minute of the outage. Which of the following is the financial impact to the business?

- A. \$400000
- B. \$350000
- C. \$250000
- **D. \$375000**

Answer: D

Explanation:

The financial impact to the business is the amount of revenue lost due to the outage of the customer-facing e-commerce website. To calculate the financial impact, we can use the following formula:

Financial impact = Revenue loss per minute x Outage duration

Using this formula, we can find the financial impact as follows:

Financial impact = \$25000 x 15 minutes = \$375000

Therefore, the financial impact to the business is \$375000, which is the product of the revenue loss per minute and the outage duration. Option C is the correct answer. Option A is incorrect because it is the product of the revenue loss per minute and the RTO, which is the maximum acceptable outage duration, not the actual outage duration. Option B is incorrect because it is the product of the revenue loss per minute and the time elapsed since the outage, not the outage duration. Option D is incorrect because it is the product of the revenue loss per minute and the sum of the RTO and the outage duration, which is not relevant to the financial impact calculation. NEW QUESTION # 71

How does cloud computing improve business flexibility?

- A. Rapidly growing and shrinking capacity
- B. Easier access by users outside of the organization
- **C. All of the above are correct**
- D. Faster deployment of applications

Answer: C

NEW QUESTION # 72

An organization is in the process of selecting a SaaS provider to replace its current internal customer relationship management

system. The business expects better functionality than what is provided with the internal system. Which of the following is the BEST reason for moving to a SaaS cloud service?

- **A. Understand current functional and non-functional requirements of the system in order to ensure the new system can meet and provide value add to current business needs.**
- B. Understand who the most experienced IaaS cloud providers are so that a recommendation can be made to the business based on what other industry vendors are doing.
- C. Understand the cost model of the hosted infrastructure and whether the current system can be hosted on cloud provided infrastructure.
- D. Understand the current SLA's of the cloud providers to ensure that they can exceed the current expected business SLA's.

Answer: A

NEW QUESTION # 73

The IT department has noticed the costs associated with the server are increasing. The application is scheduled to run uninterrupted for at least two years, and the Chief Financial Officer (CFO) would like the IT department to investigate ways to decrease the costs. Which of the following would MOST likely help to decrease the costs of the server?

- A. Configure resource tagging on the server.
- B. Utilize spot instances.
- C. Migrate the server to another CSP.
- **D. Convert the server to a reserved instance.**
- E. Run the server in a sandbox environment.

Answer: D

Explanation:

A reserved instance is a type of cloud instance that offers a discounted hourly rate and capacity reservation for a specific period of time, typically one or three years. Reserved instances are suitable for applications that have predictable usage patterns and require uninterrupted performance. By converting the server to a reserved instance, the IT department can reduce the costs of the server by up to 72%, compared to on-demand instances¹. Additionally, reserved instances can provide more stability and availability than spot instances, which are subject to interruption and fluctuating prices.
