

# Pdf SAP C-CPI-2506 Exam Dump & Free C-CPI-2506 Pdf Guide

Pass SAP C CPI 2506 Exam | Latest C CPI 2506 Dumps & Practice Exams - Cert007

7. Where must you configure an HTTPS inbound adapter with OAuth 2.0 authentication?

- A. In the adapter
- B. In the integration flow
- C. In the SAP Integration Suite
- D. In the process runtime

**Answer:** B

**Explanation:**

An HTTPS inbound adapter is an adapter that allows an integration flow to receive messages from external systems using the HTTPS protocol. OAuth 2.0 authentication is a method of authentication that allows clients to access protected resources on behalf of a resource owner by obtaining an access token from an authorization server. To configure an HTTPS inbound adapter with OAuth 2.0 authentication, you must do it in the integration flow where you define the adapter settings. You can choose OAuth 2.0 as the authentication type and specify the required parameters, such as client ID, client secret, token URL, scope, and so on. You can also configure additional security options, such as SSL certificate, CSRF protection, and CORS policy.

Reference: Using Adapter Inbound Security - SAP Learning, Set Up Inbound OAuth Client Credentials Grant Authentication for Senders Calling Integration Flows with SAP-Generated Certificate | SAP Tutorials

8. In your integration flow process, the request reply returns a message with namespaces.

What can you do to delete namespaces from this message? Note: There are 2 correct answers to this question.

- A. Set up the request reply to delete the namespaces
- B. Use a Content Modifier
- C. Set up the namespace mapping in the Runtime Configuration.
- D. Use an XSLT mapping.

**Answer:** B, D

**Explanation:**

A Content Modifier is a step in an integration flow that allows you to modify the message header or body using expressions or constants. You can use a Content Modifier to delete namespaces from a message by using expressions that remove the namespace declarations or prefixes from the XML elements or attributes. For example, you can use the expression `replace($body,"xmlns:ns[0-9]*=","")` to remove all namespace declarations from the message body. An XSLT mapping is a step in an integration flow that allows you to transform the message body using an XSLT stylesheet. You can use an XSLT mapping to delete namespaces from a message by using XSLT instructions that strip or exclude the namespace information from the output XML document. For

example, you can use the instruction `<xsl:stylesheet version="1.0" xmlns:xsl="http://www.w3.org/1999/XSL/Transform" exclude-result-prefixes="*all">` to exclude all namespace prefixes from the output document.

Reference: Content Modifier | SAP Help Portal, XSLT Mapping | SAP Help Portal

9. You want to access individual entities of an HTTP call over XPath.

What must you do if no namespace mapping exists?

- A. Convert the namespaces to JSON.

## Pdf C-CPI-2506 Exam Dump, SAP Free C-CPI-2506 Pdf Guide: SAP Certified Associate - Integration Developer Pass Certify

The three versions of our C-CPI-2506 exam questions have their own unique characteristics. The PDF version of C-CPI-2506

training materials is convenient for you to print, the software version can provide practice test for you and the online version is for you to read anywhere at any time. If you are hesitating about which version should you choose, you can download our C-CPI-2506 free demo first to get a firsthand experience before you make any decision. You will love our C-CPI-2506 study guide for sure!

## SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.</li></ul>

## SAP Certified Associate - Integration Developer Sample Questions (Q43-Q48):

### NEW QUESTION # 43

Which data store operation can you use to save a customer ID?

- A. WRITE
- B. SELECT
- C. POST
- D. GET

**Answer: A**

Explanation:

In SAP Cloud Integration (part of Integration Suite), the Data Store operations allow temporary or persistent storage of messages for asynchronous processing or correlation.

WRITE # Used to save/store data (e.g., Customer ID) in the Data Store.

GET # Retrieves stored data.

SELECT # Reads stored data with filters.

POST # Not a valid Data Store operation in SAP CPI (it's an HTTP verb).

Hence, to save a customer ID, the correct operation is WRITE.

### NEW QUESTION # 44

You are creating an API proxy. Which of the following is a valid path prefix?

- A. /sap/opo/odata
- B. /sap/opu/odata
- C. /sap/odu/odata
- D. /soap/opu/odata

**Answer: B**

Explanation:

In SAP systems (e.g., S/4HANA, SAP Gateway), OData services follow a standard URL path:  
/sap/opu/odata # The valid and official prefix for OData services.

Example: /sap/opu/odata/sap/API\_BUSINESS\_PARTNER

Other options:

/sap/opo/odata and /sap/odu/odata # Typographical variations, not valid.

/soap/opu/odata # Incorrect, since OData is not SOAP-based.

Thus, the valid prefix is /sap/opu/odata.

#### NEW QUESTION # 45

Which log level must you use to examine the payload at specific processing steps in an integration flow?

- **A. Trace**
- B. Info
- C. Debug
- D. Error

**Answer: A**

Explanation:

In SAP Cloud Integration, the log levels are:

Info # Default, logs basic execution details.

Debug # Logs processing steps, but not message payload.

Error # Logs only failures.

Trace # Captures message payloads at specific processing steps, used for deep troubleshooting.

Thus, to examine payload at runtime, the log level must be set to Trace.

#### NEW QUESTION # 46

You call the following URL in your browser: [https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE\\_BASIC/ProductSet\('HT-1000'\)/ToSalesOrderLineItems](https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet('HT-1000')/ToSalesOrderLineItems). What file type is displayed?

- **A. XML**
- B. Java
- C. PHP
- D. HTML

**Answer: A**

Explanation:

The URL shown is an OData service endpoint exposed from the SAP ES5 Gateway demo system:

[https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE\\_BASIC/ProductSet\('HT-1000'\)/ToSalesOrderLineItems](https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet('HT-1000')/ToSalesOrderLineItems)

OData services in SAP Gateway return XML responses by default when called in a browser, unless otherwise specified by request headers (like JSON format).

The structure follows AtomPub/Atom XML representation, showing entity details and navigation properties.

Therefore, the file type displayed in the browser is XML, not HTML, Java, or PHP.

#### NEW QUESTION # 47

What kind of editor can you use to manipulate integration flows?

- A. Command-line editor
- **B. Graphical editor**
- C. Code editor

**Answer: B**

Thus, the editor is the Graphical editor.
