## 免費PDF ADX-350題庫資料 & 保證Salesforce ADX-350考試成功與最新的 ADX-350考題資源

難道你不想在你的工作生涯中做出一番輝煌的成績嗎？肯定希望那樣吧。那麼，你就有必要時常提升自己了。在Salesforce行業工作的你應該怎樣提升自己的水準呢？其實參加IT認證考試獲得認證資格是一個好方法。Salesforce的認證考試資格是很重要的資格，因此參加ADX-350考試的人變得越來越多了。

## 最新的 Mulesoft Developer ADX-350 免費考試真題 (Q45-Q50):

問題 #45

An AnyAirlines employee regularly performs a manual process to extract customer and flight information from multiple legacy systems. AnyAirlines recently purchased MuleSoft automation and wants to automate this process using MuleSoft RPA. During an evaluation of the candidate RPA process, which two key qualifiers should be considered? (Choose two.)

- **A. Is the process rule-based?**
- B. Is the process speed-sensitive?
- **C. Is the process data-driven?**
- D. Is the process risky?

答案: A,C

解題說明:

When evaluating a candidate process for RPA automation using MuleSoft RPA, consider the following key qualifiers:

Is the Process Rule-Based?:

RPA is well-suited for processes that follow clear, predefined rules. If the process involves repetitive tasks with defined rules and decision points, it is a good candidate for RPA automation.

Rule-based processes can be accurately automated by RPA bots without the need for complex decision-making.

Is the Process Data-Driven?:

Data-driven processes involve manipulating, transferring, and extracting data, making them ideal for RPA automation.

If the manual process involves working with structured data (e.g., extracting customer and flight information), it is a good fit for RPA, as bots can efficiently handle data operations.

Other considerations like risk and speed sensitivity are also important but focusing on rule-based and data-driven aspects ensures that the process is structured and systematic, making it easier to automate reliably.

RPA Best Practices

#### 問題 #46

Northern Trail Outfitters recently purchased another company. Both companies have separate Salesforce orgs. One business user wants to automate a workflow which requires data transfer between both orgs and automates a distinct multi-user workflow within one of the orgs.

According to best practices, which two hyperautomation tools should these workflows use? (Choose two.)

- **A. Flow Orchestration**
- B. MuleSoft RPA
- C. Anypoint Platform
- **D. MuleSoft Composer**

答案: A,D

解題說明:

To automate a workflow that requires data transfer between two Salesforce orgs and a distinct multi-user workflow within one of the orgs, the following tools are recommended:

MuleSoft Composer:

MuleSoft Composer allows for easy and quick integration between multiple systems, including different Salesforce orgs. It provides a no-code solution for connecting and syncing data across Salesforce instances.

Use MuleSoft Composer to create the integration flows that handle the data transfer between the two Salesforce orgs.

Flow Orchestration:

Salesforce Flow Orchestration is ideal for automating complex, multi-step business processes involving multiple users within a single org.

Use Flow Orchestration to design and automate the distinct multi-user workflow within one of the Salesforce orgs. It helps in coordinating user tasks, approvals, and other business processes seamlessly.

Combining these two tools leverages their strengths to handle both the integration and the complex workflow automation efficiently.

MuleSoft Composer Documentation

#### 問題 #47

AnyAirlines is creating a hyperautomation solution that will run any time a record is created in NetSuite and will update a record in Salesforce. Many records present in Salesforce need to be related to the updated record. AnyAirlines wants to automatically update each of these dependent records.

When combined, which two hyperautomation solutions should be used to automate this process without involving IT? (Choose two.)

- A. MuleSoft RPA
- B. Anypoint Platform
- C. Salesforce Flow
- D. MuleSoft Composer

答案： C,D

解題說明：

To automate the process of updating related records in Salesforce when a record is created in NetSuite, combining Salesforce Flow and MuleSoft Composer is ideal:

MuleSoft Composer:

Use MuleSoft Composer to create a flow that triggers when a new record is created in NetSuite.

Configure the flow to update the corresponding record in Salesforce. This ensures that changes in NetSuite are automatically reflected in Salesforce.

Salesforce Flow:

Use Salesforce Flow to create a record-triggered flow that updates all dependent records whenever the primary Salesforce record is updated.

This flow can be set to trigger on updates to the primary record and include logic to identify and update all related records.

Combining MuleSoft Composer for integration and Salesforce Flow for in-Salesforce automation ensures that the entire process is streamlined and automated without requiring IT involvement.

#### 問題 #48

AnyAirlines wants to create a new marketing campaign that sends customers special offers every month based on their accrued loyalty points. There is an existing integration for customer data using MuleSoft's API-led three-tier strategy. Loyalty information exists in an external system that can be accessed via an HTTP endpoint provided by the system, but has no current integration. The external ID used will be email address.

The desired output is a CSV file containing customers that includes only the top 10 percent of loyalty point holders.

What is the most efficient way to meet this requirement?

- A. 1. Have the MuleSoft team develop a new integration that includes a new System API to both the Customer and Loyalty systems.
- B. 1. Create a Salesforce Flow that retrieves the Contact data.
- C. 1. Create a MuleSoft Composer flow that utilizes the current Customer integration to select all customers.
- D. 1. Have the MuleSoft team develop a new integration that includes a System API to the Loyalty system and uses the existing Customer System API.

答案： D

解題說明：

\* Develop System API for Loyalty System: The first step is to develop a new System API that integrates with the Loyalty system. This API will handle communication with the external system via the provided HTTP endpoint.

\* Utilize Existing Customer System API: Use the existing System API for customer data to retrieve necessary customer information. Combining these APIs ensures a modular approach and reuse of existing assets.

\* Create Process API: Develop a Process API that combines data from both the Customer and Loyalty System APIs. This API will process the data, apply business logic to filter the top 10 percent of loyalty point holders, and format the results.

\* Create Experience API: Develop an Experience API to serve the business consumers. This API will provide a user-friendly interface for initiating the integration and retrieving the results as a CSV file.

#### 問題 #49

AnyAirlines wants to share the Flight Path API through their public Anypoint Exchange Portal.

What should be configured before the API can be shared?

- A. The users that need access to the API should be added to the appropriate role in Anypoint Platform.
- B. The API should be functional and accessible for users to interact with.
- C. The visibility level of API instances should be set to public.

- D. The API should be secured using one of the supported authentication/authorization mechanisms.

答案： C

解題說明：

Before sharing an API on the public Anypoint Exchange Portal, several configurations must be in place:

Set Visibility Level to Public:

Ensure the API's visibility level is configured as public within the Anypoint Platform so that it can be shared and accessed by external users.

Navigate to Anypoint Platform > API Manager > Select the API > Settings > Set Visibility to Public.

Ensure API Functionality and Accessibility:

Make sure the API is fully functional and accessible so that users can interact with it once shared.

Configure Security:

While setting the visibility to public is crucial, ensuring that the API is secured using one of the supported authentication/authorization mechanisms is a best practice to control access.
